* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, November 6, 1998, type "send ltr1106.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

From: Stu Olson <solson@usa.net>
Message-ID: <78d09t$7nm$1@birch.prod.itd.earthlink.net>
Source record: 152730

VoiceKeyExpress has been upgraded to version 1.3.3.

This version adds message buffer configuration "save and restore". When you exit VKE, the current message buffer information/options will be saved. These settings are automatically restored when you start VKE again. (Note that is feature is enabled in registered copies.)

1635. PorkButt got a FCC visit! About Time!

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-23 00:00:00 UTC
From: dx302man@aol.com
Message-ID: <19990123125634.23104.00001545@ng102.aol.com>
Source record: 152732

DX302MAN News Bulletin

WB2OTK was visitedï¿½ by FCC officials according to reports made on 20 meters. AF2Y stated that he is extremely upset with the FCC for going after WB2OTK. WB2OTK was suspected of running illegal power and jamming QSO's on 20 and 75 meters. According to reports, OTK was running an illegal amplifier at illegal power levels. Other amatuers on 20 meters have stated that they also haverecieved letters in reguards to their operating practices. W4JYZ--akadumbass Donny----stated that he recieved a letter telling him that he ison notice to stop his illegal activities. If you listen in on 14.300 or313 youwill hear something that you have not heard for over 10years-----Civility!

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a complaint contact the Federal Communications Commission at: rlee@fcc.gov Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

ï¿½ It looks as if the sad state of affairs that has been amatureradio is now starting to be cleaned up.ï¿½ Congratulations to all who havebeen involved in the campaign to clean up ham radio. We are winning thewar.

I don't necessarily believe that dumb is in vogue...it's just that there are so many people graduating from high school and college that are just plain stupid and unmotivated to take the time to do things right. But you are right, there's a lot of advertising and even big-time network news Gods, (Brokaw, etc.) who continually make serious gramatical errors (superlatives mostly) and it's just ok. Murrow and Cronkite are unknowns of the past to most and speaking correctly is a thing of the past.

WA2XSY is an AMATEUR CALL. Its an AMATEUR EXPERIMENT.

> Are you jealous? Did you apply for an experimental license so you could
> assist in the experiment? If not, why not? Why didn't you write up a
> research proposal long ago?

Anything not written by ARRL is summarily dismissed by the FCC after the ROBOTS go thru the NPRM motions, and ARRL counters that ITS is ALWAYS the RIGHT WAY. I dont have a chance.

> The ARRL NCSs have already passed rigorous screening and were probably
> deemed the best organized group for conducting communication tests

Yes by virtue of their collective K1ZZ ass kissing. Ham emergency commmunications are inefficient and largely a joke, excepting the few hams using MODERN modes like PACTOR II. CW nets are arcane, and why are NCS stations any more quailified than DXers, airbags or contesters to decide if a band would be useful.

> due to their past performances as NCSs. What we *don't* need is some
> unorganized group of free-lance experimenters ruining any chance of

Yeah, the burping and farting comment, gave it away to me. I think. Still,
I kind of wonder if hams really are bad tippers. It wouldn't suprise me,
for the whining about how EXPENSIVE everything is I hear on this forum.
And all the silly, like 'why does crap software cost SOOO much money' whining. I'd
think the 'why should those waitresses get so rich' whining is only the next
logical step.

>Has any one heard anything about restructuring?
>Any indications on which way we will be going?

Don't expect anything from the FCC for at least several months
and it could be much longer than that too.

If you want my thoughts, I see a definite
5wpm General. Beyond that, it is a toss-up but I
expect one of the following (in no particular order):

4 classes (essentially the ARRL proposal w/o 12 wpm test)
Tech (no code)
General, Advanced , Extra all 5 wpm

OR

3 Classes (the NCI proposal as submitted via comments)
Tech (no code)
General and Extra at 5 wpm

OR

4 classes (the ARRL proposal)
Tech (no code)
General 5 wpm
Advanced + Extra at 12 wpm

OR

3 Classes (the ARRL proposal, but eliminating advanced also)
Tech (No Code)
General 5 wpm
Extra 12 wpm

An analysis of the comments shows an overwhelming
majority (70%) favor the 5 wpm General. As to any
speed test above 5 wpm, it was about a 50/50 split
of those that said no greater than 5 wpm and those that
wanted one or more speed tests above 5 wpm (e.g
12 wpm per the ARRL proposal or the status quo of 13
and 20)

Cheers,
Bill K2UNK

1653. CB RAMBO IS BACK IN ACTION!

>used to extend the range of the portable. I used these when I was with the VA
>State Police in 1980. Worked very well.

, That's not a SIMPLEX repeater. The PACRT unit repeated signals received
on the main mobile radio which was usually on another band; e.g. cross-band
repeat. California CHP also has done this for many years.

First, why not stop using those ridiculous caps to show your emphasis. I'm sure anything you say would be loud and obnoxious.

Second, ARRL may be best suited to experiment and it is better than no band at all as long as we amateurs ultimately gain access to the subject set of frequencies.

Most codes like that refer to the last 2 didigts of the year, and then the
number of the week of that year. That would be the 37th week of 1998.

Ok...I'm convinced I won't get $1000 apiece for these radios so
here goes. Reason for selling. To much equipment. All equipment
in excellent condition. Scale of 1-10 I would guess at least an 8.
Might consider a trade but really not looking for anything.

1. Kenwood IC28-A 2 meter transceiver, has
21 channels and PL. Asking $150.

2. Kenwood IC48-A 440 transceiver. Also has
21 Channels and PL. Asking $150.

(Take both for $275)

3. Kenwood TS50. 160 thru 10 meters. MARS
mod was done so it's general coverage.
asking $625

Hello Jeff,

I understand, what you mean, when you say there should only be one decimal point in any number. For someone to just copy their digital readout and consider that to be 'gospel' is, simply said, ambiguous and should NOT be used.

I do have a problem with the example you give. Now I may be 'nit picking' but when you say 10,000 pF, although this is the 'conventional' usage, I maintain that it is wrong. The correct term is 10 nF. To say 10,000 pF is almost as poor as saying 10,000,000 fF. Also NIST rules for manuscripts says the comma should not be used. To express your number it would be more correct to use 10 000 pF! Now THAT'S nit picking! :-)

In the past I've used the following link whenever I've had doubts and needed to try to standardize my Technical Manuscripts.

1676. K1MAN interviews PorkButt! 3.975 LSB tonite!

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-24 00:00:00 UTC
From: dx302man@aol.com
Message-ID: <19990124163516.22940.00002515@ng38.aol.com>
Source record: 152524

If you noticed that "The Great Liberty Net" went till 5:45am EST this morning, you ain't seen nothing yet.

My staff has just informed me that K1MAN, Glenn Baxter, has had a telephone interview with Richard Whiten, aka "PorkButt", WB2OTK, on his recent FCC visit.

By Mr. Hollingsworth! .

Folks, this could better than the Starr Report! Better than Komrade Klinton's 4 hour testimony! Better than the Monica tapes! This will top any "Great Liberty Net!"

Will Porkbutt tell all! Will he admit to using a ILLEAGAL AMPLIFER at ILLEAGAL POWER LEVELS? We'll see soon enough!

K1MAN could get a pulizter prize for this!

3.975 LSB tonite! Tune in! Enjoy! Thousands and Thousands of Hams and SWL's will have thier ears up to their speakers, ready to hear the truth!

1677. need help on 1com 229a

Looking for a Friend:

Can anybody help with the schematic for an Icom 229A.Need to know what it is
I adjust to turn the AUDIO up for the mic.I have been told that my audio is
very quiet.
colin@gm0rlz.freeserve.co.uk
you can post it here or reply to my Friends e-mail address

1678. Need Research Suggestions about Old QSL Card

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-24 00:00:00 UTC
From: Geno Rice <ricekolva@monmouth.com>
Message-ID: <36AB92BB.E90FE262@monmouth.com>
Source record: 152526

My wife is writing a pictorial history of our town, Highland Park (NJ, USA), and she has included the picture from the front of an old QSL card from a HP resident of the 30s. She asked me to write a short caption about it so I'd like to get advice from the net about how to find some accurate information. For example, are historical lists of amateur licensees available on the web?

The card consists of a glossy photo of the station with the operator sitting on the desk holding a mike in his hand. The transmitter stands on the floor next to the desk, about 5 feet tall. The call letters W2KTX are seen in large letters on the transmitter. The operator's name, Larry Caneel, and address, 203 Cedar Ave., Highland Park, NJ., are handwritten above the photo. The contact information (Radio W3JC Ur fone, 160 mtrs Q5 R8) is written below the photo

I need to confirm the spelling of his name and the years he would have been active at this location. Also, how would this card be used? Am I right that this is called a QSL card? Presumably he meant to send it to station W3JC? There is an address on the back but no stamp - Larry went to the trouble of writing the front of the card but he never mailed it. How common were photo QSL cards at this time? The other cards you can see in the background of the photo just consist of the call letters in large type.

Regards,

Geno Rice

SB DX @ WW $OPDX.393
Ohio/Penn DX Bulletin No. 393

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 393
BID: $OPDX.393
January 25, 1999
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1VV, K1XN & Golist, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, W4SMG, W7TSQ, WB8BGY, W0YG, 5H3US/K8MN, 425 DX News, DJ5AV & DX News Letter, DL7VRO, F5NOD, G3SWH, G3VMW, G4BUE & DX News Sheet, JA6VQA, OZ6TL, RV1CC, SM7AED, SP2UKB, VA3DX and YO2LDE & South-West DX Bulletin for the following DX information.

4S7, SRI LANKA. Bob, ZL1RS, is currently in Sri Lanka for the next nine months. He hopes to be able to have his radio sent to him and obtain a license. Usually the licensing procedures in Sri Lanka can take up to three months. QSL direct only via ZL1RS.

5Z, LAMU ISLAND UPDATE. Jim/G3RTE, Phil/G3SWH, John/G3WGV and Rob/5Z4RL, who will activate Lamu Island on the northern Kenyan coast between February 17-24th, have announced that their callsign will be 5Z4LI, and their thanks go out to 5Z4NU and 5Z4RL of the ARSK for their assistance with this allocation. QSLs will be handled by G3SWH, Phil Whitchurch, 21 Dickensons Grove, Congresbury, Bristol, BS49 5HQ, United Kingdom or via the RSGB bureau. For more detail, please refer to OPDX.390.

6 METERS OPERATIONS PLANNED FROM 3B9. OPDX has learned that Ned Stearns, AA7A, avid VHF DXer/Contester from Arizona, has joined the major multi-national DXpedition group that is heading out to Rodrigues Island, 3B9. The plan is to be active on April 1st and be on the air for as much as 10 days. Ned is reportedly in charge of assembling the six meter station. He states, "That time of year and this part of the solar cycle looks promising for potential six meter propagation to EU and JA and possibly the U.S. over the long path." Ned will be bring a modest station with him which will include modest power (100 W), modest antennas (5 elements on 5 meter boom) and a 6 meter attended beacon. He is willing to work with DX enthusiasts in EU, JA and the US in order to plan his 6 meter operating schedules for this once-in-a-lifetime DXpedition. Ned can be reached via E-mail at: stearns@goodnet.com

8P, BARBADOS. Glenn, VA3DX, will be going to Barbados again from January 23rd-February 6th. He will use the callsign 8P9DX. His activity will be on RTTY/SSB/CW and all bands. Glenn states that he will be a serious entry in the CQWW 160 CW Contest. QSLs are via VE3ICR ("OK" in any callbook since 1984).

C5, THE GAMBIA. Steve, G3VMW, informs OPDX that he will be operational from Banjul as C56/G3VMW or possibly C56SW from March 4-18th. There will be activity on all bands 160-10 meters CW only and in the RSGB Commonwealth Contest March 13-14th. The C5 log with an Internet log search facility will be available immediately after the operation at: http://www.bramham.demon.co.uk
QSL via G3VMW: Steve Wilson, G3VMW, Bramham, Wetherby, West Yorks, U.K.

DXCC NEWS. The ARRL has announced that Wayne Mills, N7NG, will be the DXAC Chairman and that John Kanode, N4MM, will be the ARRL Board DXCC Liaison for 1999.

DU, PHILIPPINES. "The 59(9) DXReport" states that Andy, G4ZVJ, will be active sometime between now and February 24th as DU3/AH8F. Activity will be CW on all bands.

E3, ERITREA. The "425 DX News" reports that Joe/I2YDX and Bob/IK2WXZ are planning to activate some Eritrean islands between January 30th and February 7th. They will only be using 100 watts into a vertical antenna and will operate CW (40 kHz from band edge) and SSB on the usual IOTA frequencies. Their callsigns are to be issued upon their arrival. QSL via home callsigns.

FR/T, TROMELIN. Henri, FR5ZQ, will once again be active from here as FR5ZQ/T sometime between February 3rd and March 3rd. His activity will be limited due to his meteorological work on the island. Operation will be CW/SSB on 40, 20, 15 and 10 meters. His suggested possible schedule is: 0900-1300z 21010 kHz 1300-1400z 14272 kHz (a JA net)
1100-1200z 21190 to 21300 kHz 1600-1800z 28450-28505 kHz
1200-1400z 28450-28505 kHz 1600-1800z 14133-14200 kHz

QSL via Henri's home callsign: Henri Namtameco, Rampe de Saint-Francois, 5052 Tour de la Chaumiere, 97400 Saint-Denis, Reunion Island via France

KH0, MARIANA ISLAND. Look for Kazu, JA1RJU, to be active from here beginning in February as KH2K/KH0. Activity will be on CW, all bands including 160 meters. QSL via JA1RJU.

KH0, MARIANA ISLAND. The members of Oita DX Club (Kazu/JA6BTO, Kim/AF4LX, Take/JA6PBO and Aki/AF4KH) will be on the air from Saipan Island, Northern Marianas, between February 11-14th. Activity will be on 160-6 meters with operation on CW/SSB/SSTV. Their callsigns were not mentioned. QSL via JA6VQA via bureau or direct to JA6VQA: Akio Tagami, 6-kumi tomioka Oita 870-0947 Japan.

QSL INFO AND NEWS.....
Alex, RV1AC, informs OPDX that he finally has the printed QSLs for his IOTA activity from EU-066 (as RV1AC/1 and RU1AS/1 in June, 1996) and

EU-147, EU-162 (as RK1B/1 in July, 1997). All bureau and direct requests have already been answered, but if somebody still needs a QSL please send direct to Alex's home address at: Alex Pastchenko, P.O. Box 104, St.Petersburg, 192241 Russia (Please SASE).

OPDX received a message from Dave, 5H3US (K8MN), indicating that his QSL Manager Ken, WA8JOC, will respond to bureau cards! Dave states, "We've always done so. Bureau cards are not handled very expeditiously since the sender would certainly QSL direct if the card was very important to him." By the way, Ken, WA8JOC, has announced this week that he ONLY handles the QSL chores for 5H3US and no other 5H station.

8Q7IO, 8Q7IQ and 8Q7VK QSLs. Fritz, DL7VRO, reports that all USA inquiries for the 8Q7 stations, direct and E-mails, have been answered. However, QSL cards for 8Q7VK have not yet be answered since the logbook has not been received. If you have any questions, they can be answered via Fritz's E-mail address at: dl7vro@ibm.net

QSLs for 3D2TC should be QSLed to Craig Thompson, 50 Beach Road, Suva Point, Suva, Fiji Islands.

OPDX has been informed that Jackie Calvo, F2CW/ZL3CW is back in New Zealand. He has a huge laundry basket full of E31AA QSL requests, but is currently awaiting his E31AA cards from the printer. He hopes to have the cards in hand by the end of this month. He made 25000 QSOs, with a defective (improperly modified) TS-50, running only 10 watts! He is receiving about 20-30 E-mails a day, most asking for his post address, but some are already asking, "Where's my card?!" Have patience people - more E-mail and other queries just slow things down. NO SECOND REQUESTS NEEDED. QSL via ZL3CW.

Well-known QSL Manager Joe, W3HNK, wants it to be known that he is NOT the QSL Manager for JD1AMA.

The W1AA/CC 96th Anniversary operation from the 1903 Marconi Station site on Cape Cod was active for 6 hours making about 600 QSOs. QSL via W1AA.

The FT5WH Log is now available on the Web. They currently do not contain all contacts, but they will be added shortly. Check the Web site for contacts: http://perso.easynet.fr/~f5nod/ft5whlog.html
QSLs for FT5WH will be printed soon. They are waiting for some pictures of Crozet. The QSL manager is F6KDF: Radio club de la Gendarmerie, 292 route de Genas, 69677 BRON CEDEX, FRANCE

SN0, POLAND. Look for several station to be active using this special prefix in celebration of the 35th anniversary of the Amateur Radio Club SP2PMK in Torun. The following stations will be using the special prefix SN0 until the end of the month of January: SN0BBD (QSL via SP2BBD); SN0BMX (QSL via SP2BMX); SN0EFU (QSL via SP2EFU); SN0BNM (QSL via SQ2BNM); SN0SWT (QSL via SP2SWT); SN0UKB (QSL via SP2UKB); SN0PI (QSL via SP2PI) and SN0PMK (QSL via SP2PI).

SPECIAL EVENT - ARRL HQ STAFF TO SUPPORT SCHOOL CLUB ROUNDUP. The ARRL HQ staff will support this year's School Club Roundup (SCR) operating on HF from Hiram Percy Maxim Memorial Station W1AW. The SCR takes place February 8-13th. "Special emphasis will be put on contacting youth groups, especially school clubs," said ARRL Field and Educational Services Correspondent Dan Miller, K3UFG. Depending on propagation and the availability of volunteers, watch for W1AW between 1600 and 1700 UTC on the suggested SCR frequencies. Details for suggested exchanges and frequencies can be found in January's, 1999 QST, page 92, or at the Web site: http://www.arrl.org/contests/announcements/99/scr.html
Each day of the event, HQ staff volunteers will spend their lunch hours at W1AW making contact with as many youngsters as possible.

SPECIAL EVENT (Four countries will be involved with this one). An era in the History of the Communication will come to an end. The Global Maritime Distress Safety System (GMDSS) will be fully implemented on February 1st. This will cause the International listening watch on 500 kHz to cease. Operators from Greenland, Iceland, Faroe Island and Denmark will be active February 1-28th and in the Special Event Weekend April 10-11th. Look for the following stations to be active:

Greenland - OX3OXF from Qaqortoq Radio/OXF
OX3OXI from Nuuk Radio/OXI
OX3OYR from Aasiaat Radio/OYR

Iceland - TF3TFA from Reykjavik Radio/TFA

Faroe Island - OY3OXJ from Torshavn Radio/OXJ

Denmark - OZ1OXZ (opr OZ8AE) from Lyngby Radio/OXZ
OZ5OXZ (opr OZ5DL) from Lyngby RADIO/OXZ
OZ1OXB (opr OZ6TL ex-opr on Blaavand Radio/OXB)
from Lyngby Radio/OXZ
Stations will be active on the following suggested frequencies, plus/minus 5 kHz: 1830, 3535, 7025, 10125, 14035, 18075, 21035, 24905 and 28035 kHz. You can expect RTTY activity from OZ1OXB. There will be a special QSL card with a Historical background for the worked "Coastradiostation" for QSOs in February. All QSOs will be confirmed via the Bureau. Those who want a direct QSL card can obtain it via the operator worked. Awards are available and will be issued for Amateur Stations and SWL confirming QSOs with: 3 of the 4 countries (Category 3); for QSOs with all 4 countries (Category 2); and for QSO with all 8 Amateur Callsigns (Cagegory 1).

SPECIAL EVENT. The West Jackson County Amateur Radio Club will activate the special callsign N5D to celebrate the 300th anniversary of "D'Ibervill's landing in Ocean Springs, MS". Activity will be from 2200z, April 23rd to 2200z, April 25th. Suggested frquencies will are: 7255, 14255, 21355 and 28455 kHz. QSL to: West Jackson County ARC, P.O. Box 1822, Ocean Springs, MS 59564

T9 AND ZA OPERATION UPDATE. Daniel, YO2LDE, informs OPDX that his activity from Bosnia-Herzegovina and Albania may now be limited to 10 days of

operation (5 days in each country) than first reported (refer to OPDX.390). His operation may get cut due to funds. However, the NCDXF has sponsored some funds (200 USD) for his expedition, but Daniel states more funds are needed for a three week operation. For more details, check the Web page: http://www.qsl.net/yo2lde/dxpedition.html

VK4XN PIRATE ACTIVE. A pirate station signing VK4XN has been active on 80 meters and other bands. However, VK4XN is an active callsign. Eric, VK4XN, holder of the license, states that he is 92 years old and blind, and has NOT been on the radio for years. He does maintain his license, but he states he only listens. Eric states he gets QSL cards all the time from people around the world. He also states that someone has been using his callsign and has had this trouble for the last several years now. He has asked for help in putting the word out that ANYONE who works VK4XN, has worked a pirate station!!!! Eric says he writes to everyone who QSLs for help to put the word out.

VK9X & VK9Y, CHRISTMAS AND COCOS-KEELING ISLANDS. A final press release from Charlie, W0YG, states that the team will leave on February 1st to head towards these islands. Look for W0YG, W8UVZ and WB9Z to become active from Christmas Island as VK9XX from February 6-13th and from Cocos-Keeling from February 13-20th, as VK9YY. Their activity will be mainly on 160/80 meters CW, the WARC bands both CW and SSB, and RTTY on 15/20 meters. QSL via W0YG. Charlie states, "Please do not include VK9XX and VK9YY cards in the same envelope."

VP8CRB NOW QRT. Jan, K4QD (VP8CRB), is now QRT from the Falkland Islands. He states that he has made over 10,000 QSO (140 QSOs on 160 meters). Jan states that if anyone has a question about their 160 meter contact, they can contact him via E-mail at: k4qd@juno.com He also mentions that the logs are online at: http://no4j.com/nfdxa/logs/vp8crb.htm
His RTTY logs are also online at: http://no4j.com/nfdxa/logs/vp8tty.htm
Jan's possible next trip may be a return trip to South Georgia or some other location.

YV0, AVES ISLAND. The "DX News Sheet" reports that the Venezuela DX Club (YVDXC) and the Association de Radio aficionados de Venezuela (ARV) met on December 18th and agreed on a joint DXpedition in 2000.

ZL9CI DXPEDITION NOW QRT. According to Don, N1DG, the ZL9CI Campbell Island DXpedition went QRT at 2359z Janaury 24th. Congratulations to the ZL9CI team for setting a new DXpedition record of 95000+ QSOS (possibly more, maybe 100k).

So? Broadcast TV has forsaken their audience and have instead gone for the cheap thrills that -most- folks have a hard time turning away from. Everything from Jerry Springer, Howard Stern, Ricky Lake, to "Bad boys, bad boys" are wonderful educational and entertaining experiences for young minds. Broadcast TV is supposed to have a little "public interest," not -pubic-interest. When the broadcasters start offering content instead of eye candy, then my famiy will tune in again. Till then, we watch PBS and carefully selected videos. And I won't allow cable/satellite in my home cause I don't want my 4 year old's head to be filled with "Tales from the Crypt" and other such gore and violence.

Fair enough Mike. I'm just wondering who is going to pay for Bill Sohl's parachute; the airline, the offending passenger, or Bill?

This may be something simple that I have overlooked, but here goes anyway.
I have an IC-2100H mounted on my computer hutch on the top, the power supply is down below and BOTH are at least 3 feet way from the computer itself. My coax is run high along the wall and my computer is on the floor. No power lines are cossing or coming close to one another.
Now with this, I am still getting interference on most of the 2m band and it only exists while my computer is on. I have ruled out the printer and monitor.
HELP!

Not plastic. Some kind of mylar like they use for those oven baking bags.
You don't want them to burn holes in them, do you?

Brian

Please........ How about a little common sense and PRACTICALITY ?
Although .01 mF would be how manufactorers would normally state that
value, 10,000 pF is ceertainly more common that 10 nF.

Since this newsgroup was formed to get the non-serious stuff off
of r.r.a.misc, there's hardly any chance. Although I notice that
some troublemakers are trying to violate that sacred principle of
non-seriousness lately. IMO, smoking is lots worse than using an
IC-706 on 27.185 at 2w AM during an emergency.

Hi all,

I've been listening to the DX'ers on 10 meters today and I notice that many of them are exchanging 10-10 numbers. Where does one get a 10-10 number and what are the requirements? Some of these guys have a BUNCH of different numbers that they're passing out...Is there a source of info on all of these numbers/clubs/whatever?

Thanx in advance.

>We're called amateurs because we don't get paid. But that isn't an excuse
>to be amateurish. The Amateur's Code says an amateur is progressive and
>keeps his station up to the state of the art.

The average amateur with average building skills, not wanting to
be an appliance operator using store-bought gear, will have a
difficult time adhering to that portion of the Code. The neighbor-
hood baker, newspaper boy, teacher, and banker just don't have
the time to acquire the necessary skills to build such a station,
then conduct the required trouble-shooting to get it in actual
operation.

>>I choose to use
>>Morse just as I choose to commute by bicycle. There are faster modes
>>of communication and travel, but I exercise my own choices, and have
>>fun in the process. With both activities I utilize my given faculties
>>rather than having to rely upon complex devices, and I can perform
>>my own repairs.

>Ah, you do your own brain surgery then. That explains a lot.

If I don't have the necessary skill needed to pursue a desired
activity, I *will* try to develop the skill. But eight years of
medical training is beyond my interest.

From the looks of you Mainlanders vacationing here in Hawaii,
a bit of walking/biking would do you some good. I can imagine
you driving one block to the grocery store rather than using
your feet, and cruising around your home in one of those electric
wheel chairs. After all, you did admit that your hand-writing
skills have vanished due to not having picked up pencil or pen to
write with this last decade.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!

.....

Please Welcome:

Ken Teunis/ KK6CS <teunisbk@redshift.com> Marina, CA

Greetings: I am an AEC with the Naval Postgraduate School ARC ARES Group. My duties are to act as laison between the group and the Monterey Penninsula Salvation Army Corp. where we operate and maintain an up to date HF,VHF,UHFand Packet system for both fixed and mobile (two systems). Our mobile setup has recently been re-mounted in a new canteen service unit with COMPLETE kitchen facilities. We are very proud of our Emergency Service facilities and invite visitors to the Monterey area to come see us.

Don Guy, KC6WLF <ctsr23a@prodigy.com> Rancho Mirage, CA

I am the District RACES Officer/Emergency Coordinator for RACES in the Coachella Valley. We are sponsored and supported by the Riverside County Fire Department.Having read some of the newsletters received by others in the area, I feel this newsletter would be of value in keeping current in emergency operations in California.

Denny Trunnelle/K6NET <K6NET@worldnet.att.net> Rancho Mirage, CA

I currently hold a RACES position as Assistant Emergency Coordinator in the Indio CA Alternate EOC, serving nine cities in the Coachella Valley. This assignment includes handling RX/TX emergency messages on VHF/HF freqencies as well as suppervising others in sending and receiving emergency traffic.

Jake Hickok KF6KDD <kf6kdd@qsl.net> Red Bluff, CA

Hey there - just saw this site linked from a friend's website. Interested and can't wait for the letters. Thanks. About to start into the emergency services for Ham Radio up here. Even taken dispatch classes at college for fun.

John J. Francis / KF6KGF <jfrancis@csulb.edu> Long Beach, CA

I am the Geology Technician at California State University Long Beach. We are in the process (as of Jan. 21, 1999) of setting up a HAM Radio club here on Campus. The club will also provide a pool of people for the CSU Long Beach Police Department - ACS. CSULB is very active right now in setting up a strong USAR/CERT (Urban Search and Rescue/Campus Emergency Response Team) program. I am a part of this program and I believe that our HAM club will be an important resource. .....

This week's EMCOMM Bulletin:

EMC167 Neighborhood Em. Supplies
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC167 Neighborhood Emergency Supplies Release 1/18/99

Note the planning for the neighborhood that is inherent in this topic from the June l996 Huntington Beach CERT Newsletter. Think about it for YOUR community!!

NEIGHBORHOOD EMERGENCY SUPPLIES

Inventory available supplies: Each family should have its own emergency supply kit. At a minimum, family kits should include:

Drinking water (at least a 3rd supply, 1 gallon per person, per day)

Additional water for hygiene, cooking and pets

Nonperishable food, including treats family members like

Flashlight and extra batteries

Portable radio and extra batteries

First aid kit and book

Manual can opener

Extra medications, glasses, etc.

Personal hygiene supplies, including toothbrushes, toothpaste, deodorant

Fire extinguishers

Tools, including an adjustable wrench

Sleeping bags or extra blankets

Tents

Tarps or heavy plastic

Cash

Medications

Determining the availability of specialty supplies. Some residents might have additional supplies, tools and equipment that will be useful in coordinated response efforts. These include:

Goggles and face masks

Wheelchairs

Emergency generators and fuel

Winches

Chain saws and fuel

Portable lights

Long ladders

Stretchers

Sturdy rope and chains

Bolt cutters

Crowbars, axes, shovels

Heavy-duty jacks

Wheelbarrows

Hard hats and sturdy work gloves

The supplies coordinator should work with families to prepare emergency supply kits. The coordinator also can work with

residents to obtain supplies for neighborhood use.

Purchasing or obtaining equipment: Because obtaining
important supplies, tools and equipment from neighbors
may be difficult, the coordinator might want to consider
other ways of obtaining them. These include:
- Purchases financed by donations or through fundraisers
- Donations from neighborhood stores

Distributing and tracking supplies after the disaster:
The supplies coordinator will be responsible for ensuring
that those who need supplies such as food and water get
them and that members of the light search and rescue,
damage assessment, first aid and other teams are properly
equipped. The coordinator is also responsible for ensuring
the return of tools, equipment and unused supplies and
replenishing exhausted inventories.

Sources for this focus sheet included the OES publication
"Organizing Neighborhoods for Earthquake Preparedness."

To subscribe to bulletins, use the Subscription Services
web page at <http://acs.oes.ca.gov/subscribe.html>. If
you don't have web access, just send an e-mail message to
<mailto:emcomm-bulletin-sub@harthaven.com>.

- For training assistance contact the ACS Training Officer
at the web site or send an email to larton@garlic.com
- Submit suggestions, topics or comments on the bulletins to
cary.mangum@macnexus.org or cary_mangum@oes.ca.gov

Bulletins are on the ACS Web page: http://acs.oes.ca.gov -and a
Landline BBS: 916-262-0856 (graphical & standard interface); and
a FTP Archive: ftp.ucsd.edu/hamradio/packet/tcpip/incoming for
some bulletins. For earlier ones: ftp.ucsd.edu/hamradio/races

.....

Please let others in the emergency services field know of the
newsletter, and encourage them to join... If you have opinions,
suggestions or written material that you'd like to share with
the group, let us know. We're always looking for new ideas and
suggestions that will benefit everyone.

See you next week!

1695. Foxhunt San Francisco Area 30JAN99 (on-foot&mobile)

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-24 00:00:00 UTC
From: KQ6XA <KQ6XA@no.spam>
Message-ID: <36ABBD06.6CC72EAF@no.spam>
Source record: 152543

SAN FRANCISCO BAY AREA COMBINED EVENT
MOBILE T-HUNT & WALKING ROCA FOXHUNT
Saturday 30 January 1999
Mobile 10AM --- ROCA Noon --- Rain or Shine
http://members.aol.com/usarogroup

MOBILE T-HUNT "PACK-A-LUNCH"
Mileage-based time-limited mobile hunt.
WALKING ROCA FOXHUNT
(Radio Orienteering in a Compact Area)
ROCA is similar to ARDF but is a walking-only time-
limited radio-orienteering event on a very short course.
3 CATEGORIES of Participation:
Mobile Only
On-Foot Only
Combined (Mobile/On-Foot)
MOBILE:
Start 10AM sharp only in Fremont!
Fremont Start Point at the top of the hill on
Zapotec Drive. Details and map of start point:
http://www.wco.com/~sakane/t-hunt/start/index.html
ON-FOOT:
Location is in the central San Francisco Bay Area*
Check-in between 11AM and 1PM at the main transmitter.
On-Foot Winner finds the most transmitters in shortest time
under 90 minutes.
* Location announced at Noon on 147.015MHz and
146.565MHz.On-Foot-Only participants may contact
Bonnie KQ6XA via email prior to event for location instructions.
END OF HUNT: 2:30PM
All 3 Category Winners announced at 3PM.
FREQUENCIES:
Fox Frequency: 146.565MHz FM (ID: KQ6XA)
Announcements: 147.015MHz and 146.565MHz FM
Mobile hunt repeater 147.015+ PL103.5
Fox monitoring repeater 440.000+ PL110.9

EQUIPMENT NEEDED:
A 2 meter beam and variable attenuator is highly
recommended for on-foot DFing in the ROCA event.
A short range field strength meter might also be helpful.

DESCRIPTION OF THE EVENT:
The main fox transmitter beacon will start at 10AM for the
Mobile Hunt. A nearby cluster of many low-power hidden

transmitters goes on the air later for the ROCA event.
All transmitters share 146.565MHz at random time intervals.
All Participants must sign in and get a score card at the
main transmitter beacon before starting the ROCA event.
Walking distance to the transmitters will be short,
on easy level ground. Each participant will be given a list
of the audio identification signals of the various transmitters
when they check in. The participant must copy down the
"password" found nearest to each ROCA transmitter.
This walking hunt will be based upon ROCA Rules
(Radio Orienteering in a Compact Area).
INFORMATION ABOUT ROCA:
http://members.aol.com/usarogroup
BEGINNERS:
A beginner on-foot hidden transmitter may be
available on another frequency by request.

73 --- Bonnie KQ6XA
Jointly sponsored by LARK-SBARA and USA ROG.

Looking for Heathkit TX-1 Apache transmitter needs to be in real good cosmetic condition inside and out, not necessarily working but repairable.

Also looking for Heathkit SB-10 sideband adapter, also in very good condition.

Also looking for Heathkit RX-1 Mohawk receiver, also in very good condition.

1705. Wireless LAN

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-24 00:00:00 UTC
From: KY0L <davephan@visi.com>
Message-ID: <36ABE4CD.C025C64D@visi.com>
Source record: 152553

I am interested in setting up a wireless LAN over a distance up to several miles. I have seen the units priced at over $1000. Some are quite pricey at several thousand dollars. Does anyone know if there have been any construction projects to build such as computer link? I am looking for a cheaper way to do the wireless LAN. It seems that there should be a cheaper way to Link a couple of computers. I would like to link a DSL data rate between two computers at a relatively low cost.

> Hi Guys :
>
> Are there any "drawbacks" to using a "vanity" call sign?

None that I can tell. But in my case we wanted to secure the call WE1RD - so we got a club callsign and then used the vanity program to change KB1CBU to WE1RD.

I still think whoever registered K0TEX as the Red River Radio Club had a really good imagination.

>

Or why not follow the trend. AT&T is the official name instead of the American Telephone & Telegraph, FedEx is the pref'd name of Federal Express, UPS is what used to be United Parcel Service. Just keep ARRL. No need to change anything.

>Brian

Discovery, Disney, The Learning Channel, The History Channel, Cspan, CNN, CNBC, Turner Classic Movies, The Travel Channel, are a few of the channels I find interesting on cable. As I said before the majority of cable here is good programming that the family can watch. Tales from the Crypt is on over the air broadcasting here, but late at night so an unlikely hour for a 4 year old.

But I would think that you would control what your 4 year old watches even on over the air TV as you could do as well if you had cable. You are missing some good programming on cable...

>I need to confirm the spelling of his name and the years he would have
>been active at this location.

He is not listed in my 1934 callbook. From my 1947 callbook he is Lawrence J. Caneel at that address. He is currently listed (www.qrz.com) at 60 Suydam Ave Edison NJ 08817. Ham licenses go for 10 years so he may be deceased and still be on the records. If he is alive he is 93 years old.

>Also, how would this card be used? Am I
>right that this is called a QSL card? Presumably he meant to send it to

>to the trouble of writing the front of the card but he never mailed it.
>How common were photo QSL cards at this time? The other cards you can
>see in the background of the photo just consist of the call letters in
>large type.

You are correct, it is a QSL card used by hams since the beginning of the hobby to confirm radio contacts. Photo cards were probably in the minority then as they are now. Most cards have large call letters on them. Hams routinely put these cards on their hamshack wall and that is likely what you see in the background. Larry likely intended to send it to W3JC, and from what you said did not for unknown reasons.

HamNet-UK is again looking for Amateur Radio Website submissions.

If your radio club has a website, or you have a personal website which contains information about Amateur Radio, why not include it at HamNet-UK. Now is your chance to add your site to one of the most popular Ham Radio resource websites available.

For all the latest popular software updates, information and links, visit HamNet-UK today by following this URL:

http://www.visitweb.com/hamnet-uk/

HamNet-UK, The UK`s No1 Ham Radio Web Based Resource Centre.

If you have any new URL`s which you would like to add to HamNet-UK, use the link below to take you direct to the registration site.

Once the URL has been checked, it will be added to the appropriate links section within the site.

REGISTER YOUR HAM RADIO WEBSITE ONLINE TODAY AT:
http://www.users.zetnet.co.uk/avondale/hamnet/url.htm

HAS YOUR WEBSITE MOVED??? If you have moved your website recently and it was listed at HamNet-UK, please send your updates to the above email address, using `UPDATE` as the message title.

Please note! If you have already registered your web site within the last few weeks, there is no need to do it again. Your link will quite likely already be in place. To check this, just click the `New Links` button in the right hand frame of the main page and check if your website is included!

Thanks again for your continued support.... The HamNet-UK Team!

As K1ZZ said, "the idea is to show that an amateur allocation there will improve our emergency communication capabilities by filling the gap between the 3.5 and 7.0 MHz bands." Naturally, since the exercise revolves around emergency communication capabilities, those active in providing HF emergency communications were asked to participate, *including* those using modern digital modes.

If we hams end up getting a 5-MHz band, it won't be because of our ability to do "DXing, airbagging or contesting," it will be because of our ability to provide emergency communications. If you don't see why experimental use of the band should therefore focus on emergency communication needs, the problem is with your vision, not with what the ARRL is doing.

1735. WB2OTK: Interesting case history.

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-24 00:00:00 UTC
From: Head-Shrinker@webtv.net
Message-ID: <28667-36AB3B97-4@newsd-111.bryant.webtv.net>
Source record: 152590

I'd like for others in our profession to listen to WB2OTK on 14.300 MHz. He makes for an intesting case history on pathological behavior.

To briefly bring the case history up to speed, WB2OTK, Rich Whiten of Easly, SC, has been mailed a warning letter by the FCC (which he denies) and has recently been visited by the FCC. With each new threat by the FCC, Mr. Whiten feels the need to justify his behavior and is now rambling for DAYS (not hours....) . It's been interesting to listen to how his story changes. Yesterday, he seemed quite rattled about the FCC visit and gave intimate details of the questions he was asked. Today, Mr. Whiten is changing the story and telling everyone how he was given a "clean bill of health" and that it was simply a "social visit" by Mr. Hollingsorth, who called Mr. Whiten ahead of time and asked if he could come and pay Mr. Whiten a social call!!

I think Mr. Whiten will be VERY surprised when he receives an NAL in the mail, and is told to curtail his operations UNTIL HE IS COMPLIANT WITH THE NEW F.C.C. R.F. EXPOSURE LAWS!(THAT is how the FCC is going to nail these guys...)

We're called amateurs because we don't get paid. But that isn't an excuse
to be amateurish. The Amateur's Code says an amateur is progressive and
keeps his station up to the state of the art.

>
>
>

I have had a DR-605 for over two years now, not in mobile use, but here in the base, and its a great radio, and the price is definitely right. I got it when it first came out, and even then it was a bargain. The only thing that is slightly annoying is that the supplied microphone is a real POS because mine has so many problems, but the radio is fine. Maybe a base mic or a different mic wired for the radio would be good. I've used it for voice, packet, crossband, i've turned up the power, mic gain, and the radio is a great performer. Worth the $350 or whatever they get for it now...

Cathryn Mataga wrote:

> My friends
> when I tell them about ham radio stuff seem to find it kind of charming and
> amusing.

That is a very good observation. I think ham radio is very analogous to, say, home canning of vegetables, etc.

1) It's a generally positive sort of avocation. Not intended to hurt anyone else (although I suppose you could can some spoiled tomatoes having botulism, and slip them to your enemy as a food gift, but that's not really in the original definition --- neither is jamming and all the nonsense on 75 m, etc. :-).

2) It blends "science" (theory) with "magic"(luck) & "folksiness" (county fairs/hamfests, etc.) The outcome of your work is not totally predictable.

3) There's a minimal, manageable, element of risk involved, enough to make it appealing as a 'challenge' to those who need that.

4) The people who do it will tell you that it's cheaper than store-bought [especially if you grow your own produce in your garden, etc.], that you're not dependent on some retail distributer for your food supply [once you have the jars, etc. of course], that you really know how the food you're eating has been handled, and that you can be self sufficient in case of an emergency [much like the cellphone vs autopatch arguments].

5) You're doing something many other people can't [or wouldn't] do. That's awfully important to some folks it seems, as other discussions in this newsgroup reveal.

The point being that most people, especially today, get along just fine without home canned food even though its enthusiasts tout the above (quite valid) points in #4 for example. The same is true of amateur radio.

The original poster's point was well made.

And of course it is exactly that attitude which has reduced the audience
share of over the air broadcasters to less than 16% of the total audience.
The audience is watching the programs on cable and satellite which don't
fall under the censorship that over the air broadcasters must observe.
This is killing broadcast.

>Is there any freeeware/shareware out there?

Here's a bit of freeware for you. Ignoring terrain (which you can't do if you want a realistic answer), radio range in miles is equal to half the HAAT in feet. Power level is virtually irrelevant as long as it is at least a few watts.

The primary determinant of repeater coverage *is* terrain. If you ignore that, you might as well not bother trying to calculate your coverage area.

Thankfully, the world is recognizing the inability to
contain smoke from smokers as per the peeing in a pool
analogy. That is why smoking is (thankfully)
totally banned in airplanes. IF...there was any true
ability to contain smoke to ONLY those areas designated
for smoking, then there'd be no problem. The fact that
there isn't is why smoking is slowly being eliminated
from many areas. YES, you have a right to smoke...
BUT I also have a right NOT to be exposed to your
smoking exhaust fumes.

Yes - you need a new copy. The older version you have does not have the tables and questions about the RF exposure issues. Thus a new question pool exists as well. Your old copy of the book is only helpful to learn most ofthe theory but does not help you in the new area of RF exposure and does not help you with the new question pool.

I have heard from fellow hams that after they got a "deadmans call" they started prefering chirp on cw signals, and loved the AM mode. One even claimed his "new" call was haunted. Everytime he called cq on cw he heard CQD come back to him, very wideband and sounding like aurora on two meters.

The problem with your position, Bill, is that the
smoking Nazis have prohibited businesses from
establishing "smoking only" sections where people
could be fairly isolated and you would be protected
from their smoke. For instance, recently RI passed a
law which requires all restaurants to be 'non smoking'.
A restaurant which caters to cigar smokers has been
effectively put out of business, 'cuz they catered
to people who would come in, enjoy a nice dinner,
and smoke a cigar afterwards.

You're quite right that you don't have to breathe in
anyone's exhaust fumes. But, you also have the right
to pick your butt-cheeks off the chair you're sitting
at and move, or leave the establishment if you find
the atmosphere offensive.

In turn, if a business owner wants to cater specifically
to the smoking crowd, it should be his/her right to do so.

What is WTIA?

Is this meant to be an equation: BARF divided by StumpJumpers equals WTIA, or is it a definition that the SJ version of BARF equals WTIA?

I've seen this same type of post several times, and I'd like to understand its meaning.

I doubt that over the air broadcasters suffer much from censorship. There apparently isn't much, from the garbage I see there. Further most cable channels still have much smaller audiences than the network channels, it's just that there are so many more of the cable channels to spread out the viewers. As I look across the roster of my cable channels only a few would not be acceptable as over the air material. If porn and censored material was such a draw you would think the majority of channels would be doing it.

Well, Laura, I never did get to meet Weil and I'm sorry for that. Anyone who sits at a restaurant table burping and farting is pretty much my kind of person, and I would certainly like to meet Weil.

But it is also true that hams never fart. Only CBers do. If someone farts, you can be pretty damned sure that s/he operates on 11 meters.

Some hams burp, but no hams burp and fart. Everyone knows that.

That's why I hang out with CBers. They smell more interesting.

A great site...it's worth 115 bucks to you if you do it.

http://www.linuxmall.com/refund/

Windows Refund Center

You might be entitled to a refund for Microsoft Windows and any related OEM software that may also be included if you have installed Linux, a BSD, BeOS, OS/ 2, NetWare, or another OS on a machine which came preloaded with Windows*. These pages offer a place to learn the whys and hows, and to communicate and organize with other consumers who don't like paying the "Microsoft tax" for any OEM software they've never used on their machine.

Yours,
MF Luder

You bet. Do you think I'd be content with a Class C Technician callsign like KH6OO now that I'm an Extra? And do you think I'd want the FCC-issued NH7_ Extra call? No way!

I didn't plan on becoming an Extra - I would have been content as an Advanced with the KH6OO call; but the Advanced exam took so little work to pass that a month later I sat for the Extra.

(Here in Call Area 13, Techs, Generals, and Advanced are issued 2x2 callsigns due to the mandatory "H" in the prefix.)

For Sale: Icom Delta-1A Tri-Band Handheld
two-meter, 440 and 1.2 in one handheld radio

Includes:
Leather case (in poor condition, which is why the radio isn't dinged up)
Two (2) BP-102 Battery Packs (7.2v, 1200 mA)
One BP-100 Battery Case (for 6 AA batteries)
BC-79 drop-in rapid charger
AD-22 Charge Adaptor (the wall plug in thing)
UT-70 CTCSS encode and decode board
Comet CH-32 Miracle baby antenna (3 bands)
Maldol AH-212 Action Hunter antenna (3 bands)
Icom FA-38A antenna (3 bands)
HM-65 Speaker Microphone
The instruction manual
and even the box (I think)

-and- (the piece de resistance)

A custom built David Clark headset with split audio (i.e. transmit band
in one ear, two alternate receive bands in the other ear) from Racing
Radios in Forest Park, Georgia.

Why am I selling it? I got a Kenwood TH-D7A from Santa Claus and I want
to buy the visual communicator.

How much? $585.00

The process (and this may have been confusing the last time I sold a
radio in this forum): Whoever first sends me a cashiers' check or money
order for the amount takes the radio. If several people all say "I want
it" the first actually sending me $$ takes it. I'll take a personal
check, but I'll wait ten (10) days to see if it clears. If money shows
up after then and the check doesn't clear, the radio goes to the next
check or money order received. Unaccepted offers are returned - like if
I get a check the day after I have shipped the radio (it's not my intent
to rip people off).

My address is current in the callbook. I work in Sunnyvale, California,
if you want to see the radio first.

Yes, the FCC, including Riley Hollingsworth *himself* visited the QTH
of Richard, WB2OTK on 01/22/99. They gave his station a clean bill-of-health.
There was no corrective action(s) or enforcement activity performed during the
visit. Richard said that The FCC's visit was professional and cordial. This was
an inspection of radio equipment type visit. NO illegal amplifiers.

> Other amatuers on 20 meters have stated that they also

(snip) of massive amounts of incoherent rantings by an obviously
small & juvenile mind

What I am waiting patiently to hear is the transcript of the pending
FCC visit to Fat Al's house! Bet they walk into his shack and find
more noisemakers, jamming tapes and computer .wav/.midi files
that in a New Year's party store on Dec 31st! Also would be fun if
one of the Inspectors is a person of color, seeing 'OKA likes to
refer to people of color on the air as " boy, jigaboo, turnip farmer,
eubangie, shine and of course the traditional term nig%er ".

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
```

Here is a summary of news items covered on edition #303 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 29-Jan:

1. Committee Proposes New ARRL West Central Florida Section
2. More Changes Planned for ARRL After Houston Board Meeting
3. Well-known World Leader Returns Home After Extended Absence
4. WIA Reviews Plans for Changes to Amateur Radio in Australia
5. Special Event Station Calendar with George Bowen, W2XBS
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. Weekly Propagation Forecast
8. "Packet's Best Kept Secrets" with Bill Baran, N2FNH

Transmission and production expenses for the month of January
have been underwritten by a grant from Dieter Stussy, KD6LVW,
of Los Angeles, California, where "This Week in Amateur Radio"
is carried live via satellite each Saturday at 6:00 PM on the
KD6LVW repeater on 446.2 MHz, via the K6BDE club station downlink
and on the West Los Angeles VA Medical Center repeater on
1282.575 MHz, both serving the Greater Los Angeles Basin.

"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation. The program is heard on the
"W0KIE Satellite Network" each Saturday at 9:00 PM (EST) on the
GE-1 communications satellite, transponder 12 (V), 5.7 MHz
narrowband analog audio subcarrier (3.940 GHz), located at 103
degrees west longitude in equatorial geosynchronous orbit.

On the WorldWide Web, program audio can now be found in several
formats (including streaming audio) at http://www.twiar.org
through the courtesy of the Blue Ridge Video and Digital Society
of Roanoke, VA, and at http://user.icx.net/~ke4hsm/twiar.html
with thanks to Greg Williams, KE4HSM, of Knoxville, TN. The
service is carried on VHF/UHF repeaters throughout North
America and by WA0RCR on 160 meters at 1860 kHz. Contact
your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.

Production and transmission expenses are underwritten by
donations from repeater operators, amateur radio clubs, and
individuals. Further information is available from
W2XBS, packet @ WA2UMX, or e-mail to
w2xbs@twiar.org, or Stephan M Anderman, K2SMA, at 973.875.4772,
packet @ N2QAE, or e-mail to k2sma@twiar.org.

>or will my old book plus the new question pool be enough?

No, I don't recommend it.

There are new questions (and a new chapter) on RF safety.

There are enough questions on the test that if you missed all the new RF
safety ones that you would need a nearly perfect score on the rest...

At least find someone with a copy of the book (your library?) and study
the RF safety chapter.

Other than that, armed with the question pool off the net, you should be
fine.

Good luck.

I agree with your point but not with your signature. Smoking areas in
restaurants are havens from political correctness. When a hostess asks
if I have a smoking preference, I usually reply, "Yes--Winstons".

I've been down this road. You need to run every cable comming out of the
computer through a ferrite decoupler. Sorry can't think of the name of
the device at this time, but Radio Shack sells them for about & 5.00
each. They just snap around the cable. My problem was comming out the
modem cable. KB7VZZ.

Use double shielded cable like RG-214 or RG-223. The 100% foil shield of
9913 or LMR will work well too.

Also put your PC in a good RF shielded case. My PC in a cheap case causes
all sorts of interference and I used to interfere with it until I wrapped
all the cables around ferrite rods. My Mac has neither caused nor received
any interference at all. Its case is well shielded.

Yes, because of Yahoos like "HamMan" both on and off the air.

The hand writing is on the wall, and I suspect (IMHO) that at the next WRC the requirement for any kind of code test will finally be dropped for any radio operator including ARO's!!

I got into Ham Radio because of the NO-CODE Tech class license. Learning the code takes a lot of time that I just don't have right now. I work a full time job as an Electrical Engineer and I take classes at night (I'm 42 so I'm no kid) to finish up a degree in Math/Computer Science. Now for the record, I am getting a degree in computer science just for the hell of it, nobody twisted my arm to do it. I like computers as a hobby so I decided to get the degree. What I don't need is someone twisting my arm to take a Morse Code test for a mode I currently have zero interest in using. I don't have a problem with taking any tech exams, but singling out CW for special treatment (operator filter, gateway, hazing rite etc.), get a life! When and if I ever want to use CW I know that I will study and learn the code and will do a proper job of it. So if the FCC wants to take away my no-code Tech licensee (the PRO-CODERS dream come true), that's fine, I'll spend my money on a new computer instead of a new radio and get onto the Internet. Then I'll sit back while the membership of the ARS dwindle, the FCC sells off the Ham Bands to the highest bidder and smile.

There are more that you may suspect (Tech NO-CODES) who are more qualified to operate a radio than some of the smug PRO-CODE Extras I see posting in this NG. Just because we don't have that elite licensee class does not imply we are a bunch of lazy good-for-nothing dumb hicks.

Oh yes, Clinton has nothing to do with this thread.

Gee, you're a busy guy. You're so busy, one has to wonder how much time
you have to actually OPERATE. After all, you're SOOOOO busy that you can't
learn morse code, you must be SOOOOOO busy that you can't get on the air
and operate 2 meter FM on a repeater, right?

>I don't have a problem with taking any tech exams

Well, gooooool-leeee. Wonder why not? Maybe 'cuz you already KNOW all that
material, so don't have to expend an erg of energy to actually get a ham
license in that manner?

>Dan Starkenburg - kc0eao

While there does seem to be more rude people on the air today than in the past, it is not the main reason for the numbers problem. There are simply many more intresting things to do using other media that require no entrance exam. When the code test is finally gone, and the written test is reduced to simple regulations, you may be surprised to find how few will rush forward to become hams...

Hi Simon

Dont give up yet.

I've heard all of them at one time or another. You need to switch to a narrower bandwidth 1khz or less. 500hz would be better. I have an NRD525 + 62m attic wire + mlb which is well up to the job. It does take a good rx antenna and narrow bandwidth though.

Try at sunrise and sunset. The beacons are 100watts only maximum and come in best when conditions are good to excellent. OH2B and CS3B are usually strongest. I have heard ZL6B at 10watt level around 0740. The packet qrm dominates mainly during the day.

It needs a lot of patience and persistence and a tape recorder to get them all. Good luck ! 28200 24930 18110 are clearer generally.

This is just a minority of hams. Certainly you get non-ham non-tipping people. You probably even get some hams that you don't know are hams because they don't have antennae on their cars. It's always the bad people you notice, that's true of anything.

What Tees me off are all the freebanders (seem to be Asian) on AM
that are QRMing the 28.200 beacon frequency.

It appears that these radios are channelized every 25 kHz.

Would appear that establishment of some 100W beacons with beams
on Asia on these channels .175, .225, .250, .275 etc. might be
appropriate.

Anyone has a schematic or know where I could find some information to build
a 6M J-Pole antenna made from 300 ohm TV twin-lead?

Thanks
Daniel

Greetings Hobbyists:

Did you ever play that game when you were a kid where you take the significant words out of a story and let the people in the room pick new nouns and verbs etc. without them really knowing what the story is? It turns out all goofy and funny. That was the twisted frame of mind I was in when I read this post, and decided to have fun with it.

If you just substitute a few words for Dan's flame, it casts an entirely different light.

P.S...This is not an attack on Dan, but his writing style is easy to work with.
P.S.S...I really no longer give a rats #!*%& what happens with the code issue. Why should ham radio be any more noble that the society at large?

> --
> Dan Starkenburg - kc0eao
> dan.starkenburg@cwix.com

There's a reason why NAMBLA has offered a restructuring proposal: Pedophilia is dying.
This fact is evident by looking at the decline of new marriage licenses being granted. Also,
the median age of boys is getting significantly older. The North American Man Boy Love
Association figures that by doing away with the age requirements, it will attract more
creepy old men to the hobby.

Why is man boy love dying? Because people such as yourself are carrying on a "holier than though" attitude towards those who don't yet know the ecstasy. Your attitude disgusts them, and they have no desire to become what you already are. So, if people such as yourself would drop the young age issue, and be a bit more welcoming towards our prospects, perhaps there would not be a need for the proposal.

Man boy Love is in no way related to Clinton. Which brings me to my next point: Memorizing Sex Crime Laws (which is very easy to do with a program such as BoyQuickie) does not make a Boy Lover more knowledgeable about the hobby. It just allows the pervert to molest via another molestation method.

Finally, your posting describes how NAMBLA members "trash other people to make themselves feel better". Well, what do you think your entire posting just did? It's almost as if you are upset that you ever learned to live straight. Now, you are
just upset that others might not have to go through a ï¿½complete moral collapse" to get into
the hobby, like you did.

I support Man Boy Love and am currently studying it so I can get my marriage license.
In my opinion, a homosexual requirement should at least be kept. May Boy Love has been
proven to be superior to other types of sex in times of necessity, so
it would be preferable if the majority of perverts knew at least one child. The reason
I posted this message was because the attitudes of "heterosexuality" is really degrading to NAMBLA, a hobby in which good-sex is supposed to be so
evident.

Well CB Rambo wasn't a real great speller as I nailed him a time or
two for it , but if you'll notice this "new" CB Rambo has changed his
sig file. It used to read "Where's That Big _OLE_ CB Rambo" and now it
reads "Where's That Big CB Rambo" I doubt if the "real" (cough cough)
CB Rambo would forget part of his own sig file.

> you must be SOOOOOO busy that you can't get on the air
>and operate 2 meter FM on a repeater, right?

Wrong, I'm on the radio while driving to and from school from home/work. Now how would one work a code key while driving down the expressway at 65MPH? What does CQ sound like in Morse Code while driving over pot-holes? ;-))

>
>
>>I don't have a problem with taking any tech exams
>
>Well, gooooool-leeee. Wonder why not? Maybe 'cuz you already KNOW all >that material, so don't have to expend an erg of energy to actually get a ham

You sound pissed off to me. I probably worked harder than you did. Four years of engineering school and another 18 years working in the power electronics field. What did you do? Sit down and high-lite all the correct answers in the study guide, then spend a weekend or two committing them to memory (I really know somebody who did this), then rushed out to take the exam before you forgot most of it? Anyway, I don't care how you got your license. If you have a problem with how I got mine, well it's YOUR problem to deal with, not mine.

1826. Another proposal - progressive enforcement

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-25 00:00:00 UTC
From: Todd Ellis <tellis6@bellsouth.net>
Message-ID: <PE6r2.2382$FX4.2095282@news3.mco>
Source record: 152447
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I'd like to make another suggestion regarding FCC enforcement. In light of Riley Hollingsworth's visits to Rich and Al's stations, maybe this would wake up the rest who are still either not concerned or unsympathetic to the problems in ham radio today.

I'd like to suggest a "progressive enforcement" policy with a four-level penalty plan.

1. First time offense, following an official warning letter - $100 NAL
2. Second time offense, no additional warning - $1,000 NAL
3. Third offense - $10,000 NAL
4. Fourth offense - forfeiture of license and equipment

Note that all NALs should be collected within 10 days of notice of apparent liability, and if the offender appeals the complaint and they lose, the NAL goes to 150% of the original value. Each NAL would be collected sequentially, with a great deal of press detailing the offense and the punishment.

This plan is simple in nature and I believe does not depart too far from current policies. I think the $100 NAL is a great "smack in the head with a 2 by 4", and if more punishment is needed, let's step it up and get it over with.

We're very much on our way forward with the current situation, but I am so afraid that people out there are out there are trying so badly to spin it in their direction positively. Case in point, one certain person (who was called upon by RH last week) proudly read the ARRL members-only article over 40 times this afternoon on 20 meters. Frankly, if that was me, I'd be too embarrased to mention my callsign anywhere let alone read the darn article that many times! What happened to humility? Do we need progressive enforcement to regain civility and normality to ham radio?

Nobody's arm should be twisted... and I doubt seriously that "Code" will be a requirement for all amateur license classes ever. Code is fun once you learn it... when you have the time.. when you have the desire...

I think a few "rabid" individuals are trying to speak for so called "code enthusiasts"... well... ahem... they are not speaking for all of us.. I enjoy code, ssb, fm, etc... I will defend to my best ability your right to enjoy amateur radio as you see fit... I just wish that everybody would get off their soapboxes and get back to spirit of amateur radio.

The only HF mobile I work is CW. It is no more difficult working a key while driving than holding a mike. On any given day you will hear several CW mobile stations on the air. So although I know you were trying to make a point, not learning CW because you couldn't use it while mobile falls flat...

1833. Icom 2000 keyed in CW

I've got an Icom 2000 50w FM rig in the car that I'd like to use to work RS-13 in mode A, thats 145.965 up CW. While I can probably get away with not changing the transmit freq it doesn't make it very easy. Any Icom specialits out there with thoughts of changing the TX freq +/- 5 KHz? variable.

I haven't even looked at the schematic yet but was thinking about a varicap diode tapped into the LO and using a pot to swing it up and down. Can someone give me a sanity check on this? Am I headed in the right direction or is there a better way?

Tim

I hate to burst your bubble, but I am about as conservative as you can get, but I have no use at all for CW. If some people want to continue to use this archaic dinosaur known as code, thats fine. But to force others to learn this outdated crap is ridiculous.

As far as a DUAL bander, my recommendation is the Kenwood G707A...1. LARGE display 2. ALPHA-NUMERIC display (once you use one, you'll wonder how you got along w/out it!) 3. FULL function DTMF mike that is BACKLIT...compare features for the money and I think you'll come to same conclusion....$339.00 at AES./ same features in a 2meter would be the Icom 2100H...I have both and love them.

Try to ground the radio and power supply to true ground as close to the
radio as possible. Make sure that the computer is on a different
electrical circuit than the radio power supply. This might help. Make
certain that the coax is of good quality, and finally consider getting
some ferrite material for the cables on the computer. Hard to guarantee
well shielded cables on a computer any more. Everyone goes for cheap,
which means poor quality.

I'll take this one.

Thank you for writing. It's all true. CW is representative of the old captialist/conservative system, popular among angry white males, that emphasizes acquisition of licenses to operate a station much as he oppresses women and minorities on his non-ham life. We of the United Conspiracies believe it is time for a new age in communications, not governed by so-called standards such as Ohm's Law and other scientific principles named after dead white European males.

We propose a class-based system where the have-nots can modify standards to compensate for the generations of oppression at the hands of the techno-fascists. We realize this will distress the privileged elite, but the inevitable march of history cannot be stopped. Eliminating code requirements are only the beginning. Soon there will be a speech code enforced. Many on this group are making statements that create an atmosphere of hostility toward those in government who are trying to implement the New Radio Order. The American People will not tolerate this (polls show), and we will put a stop to it.

Wishing you a good seat at the re-education center, I remain

anyone know the frequencies used by the Goodyear Police. I know they use an
800mhz

I'm showing 855.4875, 856.9625 855.9625, 860.9625 and also 460.25

are these current or does my list need updating?

In the 1980's the Plessey co (in the UK), developed an on-channel repaeter for
tactical military use called Groundsat. This was described in TT in RadCom.
It was a manpack unit that operated over 30-76MHz and provided on channel repeat
or
full duplex operation. It operated essentially by phasing out the Tx signal from
the Rx path.
UK patent 1577514 applies, fully describes the operation.

OK, now are we trolling, or do we care a whit about the outcome of CW and license restructuring? I pose this question because a) many, like myself, have politics that would make Ted Kennedy look like a law-and-order plutocrat and unbelievably, still think CW testing for HF access is a a necessity.

And b) if we are being honest making analogies, isn't the No-code position more nearly that of the Neo-Con crowd, obsessed as they are with getting "Big Government' out of everyone's lives? I mean, its government interference in ham radio! We "liberals" like rules.

There's a reason why the ARRL has offered a restructuring proposal: Amateur Radio is dying. This fact is evident by looking at the decline of new amateur licenses being granted. Also, the median age of hams is getting significantly older. The ARRL figures that by doing away with the code requirements, it will attract more people to the hobby.

Why is Amateur Radio dying? Because people such as yourself are carrying on a "holier than though" attitude towards those who don't yet know the code. Your attitude disgusts them, and they have no desire to become what you already are. So, if people such as yourself would drop the no-code issue, and be a bit more welcoming towards ham prospects, perhaps there would not be a need for the proposal.

Morse Code is in no way related to Clinton. Which brings me to my next point: Memorizing Dits-and-Dashes (which is very easy to do with a program such as CodeQuick) does not make an Amateur Operator more knowledgeable about the hobby. It just allows the operator to communicate via another communication method.

Finally, your posting describes how No-Codes "trash other people to make themselves feel better". Well, what do you think your entire posting just did? It's almost as if you are upset that you ever learned the code. Now, you are just upset that others might not have to go through the "initiation" to get into the hobby, like you did.

I support Morse Code and am currently studying it so I can upgrade my license. In my opinion, a 5 wpm requirement should at least be kept. Code has been proven to be superior to other types of communication in times of necessity, so it would be preferable if the majority of hams knew at least 5 wpm. The reason I posted this message was because the attitudes of "Code-Enthusiasts" is really degrading to amateur radio, a hobby in which good-will is supposed to be so evident.

According to CIB enforcer Riley Hollingsworth, FCC engineering and legal staff conducted some surprise Amateur Radio station inspections last week.

"Commission personnel inspected the stations of John A. Abernethy, K4OKA, an Extra Class licensee in Hickory, North Carolina, and Richard Whiten, WB2OTK, a General Class licensee in Easley, South Carolina."

"In both cases, we were monitoring until a few minutes before we went in."
"We did a pretty thorough inspection."

Wonder what they found?

Hello Mike...

That begs the larger question. Why do we need government?

After all, that's the logical extension to your position, isn't it? Is your point that you could just replace the Government with your guns? Are you being deprived of poluting peoples lungs with your smoke? (great sport!) Do you believe that Flight Attendants are free to walk out and let someone who will jeopardize their health for somebody else's 'smoking enjoyment'?

I'm sure that you're being a non-smoker will preclude you applying for those jobs. Sounds like NIMBY to me. :-)

Thinking of starting a radio net / club / contest ??? that uses surplus military radio gear. Older gear would be (AM mode) welcome...BUT the newer stuff of the 60's thur current would be prefered like the>>> "AN/PRC-GRC-URC types"109,106,25,77,47,74,104,132,1009 etc with CW/SSB or FM modes. The idea would be to get out of the shack and into the field and operate this gear kinda like it was intended, but for>fun/contest or??? Anyway you get the picture. Since most of this gear is portable/manpack design, battery operated and low RF power output maybe QRP frequencys already known to amateurs could be used?? Anyway just thinking outloud to see what the world wide web thinks... If this sounds like something to do on a weekend, once a month, once in awhile or never... drop me an E-mail and let's get going and have some fun on the bands with surplus radio gear. (THE GREEN STUFF QRP CLUB) Thanks, CAMERON / WA6VVC E-mail AT > cogan@ladwp.com < PS: Past this on to help get the word out.

S.E.E. discontinued their picture stick 2 years ago - I now want to buy one. Any one have one one?

it is a scanning led display

a little pic computer chip flashes a series of 16 diodes that are mounted on a stick.

by physically waving the stick around, one can see a 2 dimensional picture or text display.

any alternative ideas from any of you smart guys out there?

(I fly radio controlled helicopters - I though it would be fun to fly at night - and see a moving picture on the "swept out" rotor !!)

this is similar to stamp application #14

Richard R. Plourde (Dick) <rplourde@worldnet.att.net> wrote:

>That begs the larger question. Why do we need government?

Depends at what level. Federal, to manage resources (like radio spectrum)
which are a national resource. State and local, to manage programs and
policies affecting the local areas.

>After all, that's the logical extension to your position, isn't it? Is your
>point that you could just replace the Government with your guns? Are you
>being deprived of poluting peoples lungs with your smoke? (great sport!) Do
>you believe that Flight Attendants are free to walk out and let someone who
>will jeopardize their health for somebody else's 'smoking enjoyment'?

Problem Dick, is where do you draw the line? Should states pass laws that
prevent you from passing gas, because the smell is offensive to others?
Should the state pass a law saying you can't eat at McDonalds, because
high-fat foods are a cause of heart disease and when you get old you will
be a financial drain on society?

I believe people should make informed choices. Shouldn't I have to
privilege of choosing whether or not I want to take a smoking flight as a
non-smoker? I believe so. Shouldn't I have the right to go to a restaurant
that caters to cigar smokers because I like the food, even though I am a
non-smoker?

Should we force chinese restaurants to offer low-sodium, fat-free dishes
because inherently their americanized dishes are high in fat? Or, maybe we
should force them to offer italian food to, so I can go there because I
like the atmosphere, but I don't like Chinese food, yet I'll be able to
get something I like.

At what point do you draw the line at what is acceptable government
intrusion and what is not?

It also annoys me, it is caused by inexperienced and selfish RACKET
RADIO op's who have never read the band plans.
They also spread well down into the cw allocation.
RACKET RADIO should be barred from use on HF,it serves no useful
purpose other than generating RF pollution.

I'd have no problem with that as long as they used different
aircraft. The smell and contamination from smoking doesn't
just stop when the passengers disembark. That is why
hotels have more and more NO smoking rooms.

Anyway, that's it for me on the smoking vs nosmoking front.
Puff your lives into obivian all you want...just don't
include me in the process.

The reason that smoking has been banned in restaurants has more
to do with protecting people who work in such environments, rather than
patrons.

Lemme see if I got this correct......

1) ARRL has been trying to get us another HF amateur band, maybe around 5MHz.
2) They found a group of traffic/emerg comm volunteers to help check things
out. 3) The obtained an experimental license from FCC to check out the
proposed environment. 4) You've got your shorts all bunched up because of
.............(what?)!

The proctologist called. Your head is ready.

1914. Re: Ham Radio People are weird:from a waitress

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-26 00:00:00 UTC
From: marceeeee@aol.com
Message-ID: <19990126120036.08195.00001159@ng50.aol.com>
Source record: 152278

I wish I had responded to the first post when I read it.

I'm a waitress. Although speaking in very broad terms, rarely using words like "every" "always" and "never" etc, I must comment on Lauras comments.

My tips are usually based on my service and ability to smile at jerks. There are both jerks with CBs and jerks with ham radios. Anyone bringing a radio into a restaurant who isn't a local cop is a potential nerd, not necessarily a jerk. Rude? Yes if talking on one and not turning the volume down.

While there are jerks all over in every aspect of life, when it comes down to who are bigger rude jerks who don't tip well, it's (and I'm using very broad terms, not addressing all) the CBers who are usually younger, ruder and yes, the bigger jerks and non-tippers. There are plenty of ham jerks who are rude non-tippers, but in the restaurant where I've been working for 8 years on all the shifts, we've had plenty of CB and ham meetings. Maybe all the jerk hams go elsewhere and all I see is the jerk CBers, but I've seen both and the hams are if nothing else, a little older or at least a little more well bred and mannered, and most realize that serving a somewhat large group is harder work and they usually tip bigger. Give me 20 hams any day over a group of 20 CBers. If there's a cheap non-tipper among the hams, the rest usually will pickup his slack. If theres a cheap non-tipping CBer, the rest of the group will laugh about it, but not help carry his weight.

The worst tippers of all are now and
always have been and always will be are those people who can very easily afford a decent tip, but have never really "worked" a day in their life except to study for medical school and law school exams. The ones with the most money are the ones who are least apt to part with it. Old people who demand extra assistance and attentionand feel that they have been on the planet so long and should be catered to...the absolute worst tippers! I'm not talking about the poor old couple on a fixed Social Security income and maybe a small pension who drive a 1979 Chevy, I'm talking about the very well dressed, 1998 Mercury Grand Marquee driving couple with a wad of money in their pocket and have no problem telling you just how much they still make every year through smart investing. You can bust your butt making sure their food is cooked a special way, you can yes Sir and Ma'am these people to death, and end up wishing you could. If they tip at all, they're probably reverting back in their minds about how glad they might have been to get a 20 cent tip back in the 40's and just can't seem to grasp why a service persons eyes might roll in disgust when after kissing their ass for 2 hours and serving them a $75.00 plus meal and only getting a 20-cent tip. I love the elderly...I just don't like being behind them in traffic or waiting on them. I guess an elderly rude CBer or an old jerky ham would really make me pop my cork?

The best tippers? Working class men who work hard for their money and really can't afford to part with it, but since they appreicate what hard work is, they have no problem dropping $2.00 for something that only cost 75 cents just to make sure the waitress gets more than just a quarter.

: >First time a ham has been in a SPEAKING TV role ?

: No, I think that goes to Herman Munster around 1966-68.
: Anyone remember that episode?

Others have commented correctly on Arthur Godfrey, etc. However, I know that there was at least one and possibly more episodes of the old McHale's Navy TV comedy program from the mid-60s whereby some of the sailors would contact loved ones at home via Ham Radio .. the calls, of course were completely nonsensical.

Another favorite was the comedy program from the late 80s early 90s called "ALF" .... the head of the house was a Ham and ALF would try to call home, too. I think the gear was old S-Line.

What about volunteer fire, EMT's, emergency management, security, and
business people who need constant access to their radios? Are they also
potential nerds? BTW this is not a flame just a reminder some of us have
a real need to have those radios with them. But I do agree it is very
rude not to turn the volume down, not every one wants to hear all that
squawking while they relax and eat!

Kris,

Don't let the idiots who profess that not knowing code makes you any less an Amateur Radio Operator. If you are licensed to operate by the FCC, you are an Amateur. I, personally, haven't seen any reason to want to learn code, I do what operating I want to do on 2 meters. I don't have a desire to operate in the lower bands because I have other things I want to spend my money on and my time doing. The people who scream NO CODE = NO HAM are just mad because they had to learn the code to get their licenses and they oppose change. Dollars to donuts, they buy their own rigs rather than build them. I bet they were the ones being derisively spoken of when they bought a rig instead of building it.

73 and enjoy your privileges,
Kevin, N1UYW

I always thought the young kids are the 2M jammers, while the old guys
jam HF.

Why would someone 'old enough to know' be a jammer? I think someone else
stated that the typical profile was of a male, divorced and
with a substance abuse problem, like alcohol. Jamming ham radio, unlike
stealing or something, doesn't even do you any selfish good. I think it's
the angry old drunks, lashing out. I've seen myself situations, where
psychologically disturbed people, pick out, like a neighbor, or perhaps
someone else on ham radio, as the focii of everything that's wrong
in their world. They sip down the old Jack Daniels, and spend all day
stewing about, whathisname. This hatred becomes the center of their lives.

...You know what I meant. Emergency personnel, public safety people, sure. It's understood you need your radios, and most of you turn them down a bit. But it's some CBers and some hams who have them on way too loud and talk on them almost constantly. If there is a need, no problem. Is it really necessary for a group of hams or CBers to talk on their radios with one of their group who is a few minutes late, and to talk to him from the time he leave his house, going to a restaurant he's been to hundreds of times and talk to him right up to the point where he's standing at the table? Like I said, it's only a few hams that do this. CBers are a little more rude, but the whole issue was that I was trying to stand-up for hams as being less rude and better tippers (IN GENERAL) than CBers.

Lithium Ion batteries DO NOT have memories like Ni-Cad batteries. Charge them when ever you want, just keep them charged when not being used often. My 3 year old Toshiba laptop came with a lithium ion, and it's still going strong.

You need to step and smell what you are shoveling. You also
need to look at the world, all of it rather than clinging to the myths
of the past

>code requirement exists for HF privileges. RF at HF respects no

RF respects no boundaries, that does not magicaly change at
50MHZ.
>boundaries, and as communicators first and foremost, hams the
>world over should have at least one mode in common. Right now,

And just why should they have a mode in common? And why must
that Mode be Morse Code?

>there is only one mode *all* the world's HF-licensed amateurs hold

Really, gee various ProCoders are very often saying that the
Current testing does not really mean that in the US. Witness the
snipping we have seen about how the Code test is given. It is indeed
possible to pass the Code test without knowing and being able to use
Morse Code. Indeed I personaly take what hope I have of obtaining HF
in near terms for that fact.

>in common: CW. Whether one chooses to use it or not does not matter;
>if the need arises he has it available to him (maybe at a slower

Is it truely there? Or is this yet another Morse Code Myth?
just what is it about Morse Code that means skill with it remains if
it is unused. I know of NO other such skill it is maintianed if left
in disuse for years.

>speed than when he was first licensed!). The ITU has this global
>view while many individuals have only an insular nearsightedness -
>their own personal goals out-weigh those of the global amateur
>community.

That is more BS Jeff, and proof of your near sightness. The
NoCode world does indeed see the needs of the ARS differently than
you. That you insist on making the leap form that fact to the stament

that they are only out for personal gain is pure BS. Many of the
leaders of NCI, will not be affected by a change in code requirements.
Some members, such as myself would gain from their elimination sure.
To claim that the prime motive is simple greed is an unworthy debaters
trick, as well as, par for the course from the ProCode side.

BTW just how many times have you troted out this exact
paragraph I really do think I have three or four times, word for word

Well unless they made a MAJOR audio modification from the TH-78A I wouldn't go there. While the radio 'worked' I found the audio to be very tin'ny and poor quality. This of course is partly due to the size, but there is NO comparison to my Icom 2GXAT's audio. I have not heard the Icom version of the FT-50 yet but if I were going to spend that much money I'd want to put them side by side and listen to the audio, after all, the buzzers and bells are just that. Now I'd like to know why you hate the FT-50?

and 'Fatal Attraction' ex-wives?

> RF respects no boundaries, that does not magicaly change at 50MHZ.

Please review your Tech license materials again, and study the ionsphere
D, E, F1, and F2 layers, please.

> And just why should they have a mode in common?

Gonna do a lot of good to have the Brits using NBFM, and us using SSB.
A-yup. We'll make a lot of overseas contacts that way.

>And why must that Mode be Morse Code?

Because it annoys you.

>It is indeed
>possible to pass the Code test without knowing and being able to use
>Morse Code.

Well, this is certainly true. One can pass the Morse exam on guesswork
alone. That is a deficiency in the testing system which should be
addressed, if the FCC opts to maintain a code test in the future.

>Indeed I personaly take what hope I have of obtaining HF
>in near terms for that fact.

I'd recommend taking a remedial English course.

> Is it truely there? Or is this yet another Morse Code Myth?
>just what is it about Morse Code that means skill with it remains if
>it is unused. I know of NO other such skill it is maintianed if left
>in disuse for years.

I know of many skills which I still have today even though I haven't used
them in years. Sure, I may be 'rusty' and need to practice to get fully up
to speed, but a skill is something you can learn and never forget.

> That is more BS Jeff, and proof of your near sightness. The
>NoCode world does indeed see the needs of the ARS differently than you.

Sure. You see a world of free hand-outs. You see a world where you get something for nothing, and when you don't, you stomp your feet and start crying "WAAAA! WAAAA! I'M BEING DISCRIMINATED AGAINST! WAAAA!!! WAAA!!! IT'S NOT FAAAAAAAAIR! I DON'T WANNA USE CODE! WAAAA! IT'S UNCONSTITUTIONAL! WAAAAA!!! WAAAAAA!"

Jeff beat me to the 2X3 "X" issue, you'll not find anyone with such a call with a suffix begining with X although Y is used.
While it may be an experiment with hopes of gaining another band, it's not an amateur call and it's not an amateur band.

> > due to their past performances as NCSs. What we *don't* need is some

Of course you must be refering to the WARC bands when you say the WORLD won't fork over any more spectrum, or perhaps 908Mhz was the band you were reffering to.
This isn't a free speech issue Bubba, not sure how one could possibly connect free speech to an experimental license issuance, but O.K. What I really want to know, is after the experiment is done and (if) the amateur community gets a new band on 5Mhz will you go there and operate or choose to never use the band since it was obtained under circumstances you find objectionable?

>radio grew to outsize ham radio by a factor of at least 10 in 1970).

HMMMm - pretty STRANGE that with all your keen analytical abilities, you NEVER connected the fact that the "easy to obtain" CB license just *might* have contributed to the far greater numbers - and poorer quality - of occupants on CB... OR, that ever lowering the "bar" to get into ham radio might deliver the SAME result... Dumbing down exams to increase our numbers MIGHT work, but at what cost?

"A thing easily obtained, is little valued"... Unfortunately, the very bands that are opened to those unwilling to "jump thru the hoops", in conventional style, will/have become the virtual communication pig-pens we are now "enjoying"... HELL, why not just GIVE the damn licenses away - look at the demand for equipment and lobbying power we would then have on our CB-style bands...

1947. MC13135/36 Vhf receiver

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-26 00:00:00 UTC
From: "M.Ursicino" <m.ursi@flashnet.it>
Message-ID: <36ACFD53.8245B881@flashnet.it>
Source record: 152376
Cross-posted to: rec.radio.amateur.homebrew,sci.electonics.design,rec.radio.amateur.misc

I have built a VHF receiver using the MC13135. I have reproduced the
circuit given in its datasheet. It is a dual conversion VHF receiver
using a very limited number of parts.
The circuit works fine, but the bipolar transistor based front-end is
not adequate to the rest of the circuit, high intermodulation and low
sensitivity.
Apart the low sensitivity, it seems to me to have an excessively high
intermodulation distortion. Despite the excellent selectivity, it is
completely dumbed by a 2W transmitter placed not closer than 30 meters,
even if it transmits 1-2 MHz from the receiving frequency. There must be

soething wrong. The data sheet did not indicate the supply voltage and I

used 5V. Maybe it is too low for the front-end?
Has anybody else faced and solved the problem, or can anyway help
suggesting a schematic for a simple but adequeate front-end?

Hi Leland,
I deleted .antenna, .equipment, and .homebrew - from the header - you
really shouldn't post code-related comments to those groups.

Your commute-time is an ideal period to be listening to code tapes.
The concentration required is no different than that needed for listening
to the news or talk shows on your car radio, or listening to the gang
on the repeater. Being an engineer, you know how to make use of every
free minute of your day, so why not learn the code during your twice-a-day
drive? You might never want to use it on the air, but knowing it *is*
required in order to upgrade.

Wow, a suggested linkage of the Clinton Impeachment proceedings
and code! That's a novel approach. You win a free happy meal from
McDonalds and you get to share lunch with Mr Happy, wa8pbm, as well.

Congratulations, and don't forget to tell him to soak his teeth in the glass
on the porcelean sink the nite B-4.

I'm sorry. I didn't word this very effectively. I don't have anything against extra class, or people who really like Morse code. The above sentence was a little misleading, as you can't generalize "Code-Enthusiasts" as the problem. I should have said "Code-Enthusiasts who think everybody else has to be a code enthusiast or they have no business being a ham".

I think the key ideas here are that this is a hobby and morse code is just another communication method. For instance, if somebody has a Tech No-Code license and are active in repeaters and simplex, but they don't care for packet, you can't blame them for not wanting to jump head-over-heals into packet. Somebody e-mailed me saying, "As long as conversations are rewarding, educational or otherwise stimulating, what difference does it make ?" If some people find CW rewarding, that's great, but it might not be everybody's cup of tea... and that's okay, too.

I had similar problems as described below!

About 3 or 4 years ago myself & 3 friends bought a shipment
of 4 batteries for Icom-W2AT ht's. They were having a really
good bargain sale so we all bought them at the same time to save on
shipping costs & the batteries were all the same model

Within 6 months 3 of the 4 batteries were broken on the area of
where the rails grip to the radio. I contacted W&W associates
since we made the purchase directly from them & NOT one of their
dealers. I explained the situation to a lady named "MaryAnne" who
told me I was being to rough on the batteries. I told her that
these 3 broken battteries were all on different radios owned/used
by different people. Her response was that we were all to rough
on them. I told her that was not true & that one of the guys takes
IMMACULATE care of his radio & it still looks like it is (was) brand new.
She became very bitchy & refused to do anything & eventually hung up
on me. Next I called AGAIN to the manager who said basically the same
as "MaryAnne" but did offer to re-case our battery packs. I no longer
remember the price he gave but I only remember that the cost of shipping
both ways PLUS the cost he was going to charge for the new battery
cases was nearly the cost of a new battery from a competitor. (W&W was
NOT willing to help or give us a break on the prices) The manager
was also very rude & bitchy. We bought new packs from another company.

The Dayton Hamvention was coming up very soon, so I found their booth
at the convention. I bitched as loud as I could so as many customers
could hear me to both (seperately) "MaryAnne" & the manager. I did
that every year for the next 2 or 3 years at Dayton hoping to warn
as many prospective customers as I could. Finally, After a few years
I heard that they had new ownership & management and that "MaryAnne" was
no longer there. I thought or hoped they had changed, but your
story sounds like it is still the same.

Dan, you are right. Ham Radio is big enough for each of us to find the area of interest we want. However there will always be those who can't see it that way. The really sad part is they don't understand your point, never will and there is nothing the rest of us can do about it.

You need to step back so as to get a global view of why the
code requirement exists for HF privileges. RF at HF respects no
boundaries, and as communicators first and foremost, hams the
world over should have at least one mode in common. Right now,
there is only one mode *all* the world's HF-licensed amateurs hold
in common: CW. Whether one chooses to use it or not does not matter;
if the need arises he has it available to him (maybe at a slower
speed than when he was first licensed!). The ITU has this global
view while many individuals have only an insular nearsightedness -
their own personal goals out-weigh those of the global amateur
community.

I'm all for it, I've been using this eqpt for QRP for 20+
years. Works just fine, hot, cold, wet, dry, just works
and works and works. That is, except for anything made
by Cincinatti (PRC-70, etc.) which never worked and still
refuses to work.

To find this stuff go to: "http://www.telalink.net/~badger/millist/mi.html" or
"http://www.sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/BOATANCHORS/millist.txt"

From these lists pick a radio you are interested in and go to any of the major web browsers
(alta vista,
lycos, yahoo, etc. and type in the radios designation (ie. "PRC-47") and push "go" and
you'll find that
there are many of these sets for sale, parts, manuals, accessories, etc..

>
Yes there is... SS Constitution. She sails around the Hawaiian Islands. Manned by AMO and SIU. There used to be another one on the same run, same company, the Independance. Soon there will be a couple more. There was a "deal" cut whereby the company could bring in two foreign built ships for the trade, on the condition that they have two new ones built in US yards.

There are also a couple of smaller vessels you could almost call Cruise Ships that sail in Alaskan waters.

As for using your HT aboard ship, the rules are clear. You must obtain permission from the master before transmitting. Other than that, just comply with the rules and good operating practices.

I have to agree with just about every view expressed so far in this thread... Farnsworth has indeed proven itself as a learning method. I used it myself to go from nothing to 20 in just a few weeks. I also agree that it does not meet the "official" specifications as far as timing goes. And I have to concede that testing should follow the specs as closely as possible. The way out of this mess might be to change the specs, to allow the alternate timing. What's wrong with that?
Actually, my own hand-sent code is somewhat Farnsworthed. It just seems more copiable to me, as long as it isn't overdone.
The purpose of testing is not just about rules, regs, and specs. It is also about normal, efficient, courteous and customary operating practices. Anything that makes handsent Morse Code more copiable is good operating practice. Testing should reflect this as much as possible. So if the rules are the problem, maybe consideration should be given to amend THEM, and bring testing more in line with good operating practice.
That's all I got to say about that.

Been there; done that; got the QSL cards. Of course you have to be able
to copy in your head. With a keyer and paddle, CQ still sounds like
CQ--even over potholes. An automatic transmission helps.

That's not precisely accurate. A number of contries (Japan being the most notable example) have HF license classes which do not include a Morse test.

I would guess that the ability to use speech modes is common to more amateurs than CW ability.

Hi,

A few days ago I asked about study guides for the written exam and Thomas Sefranek (WA1RHP) sent me to the URL below.

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

First, thanks for the help. This URL is great and gave me confidence that I can pass the novice and tech knowing what I know now. I have about two weeks until the next exam is given in my area, so the next question is what to do with the remaining two weeks?

Can you learn enough morse code in two weeks to pass element 1? I'm going to use the morse section of the web page above, but it's not much more than a generator for code at different speeds.

Any good ideas/web pages on learning the code?

Martin Heermance

Look, enough bashing of the Technicians. The ARRL simply wants to have a name that actually _is descriptive_ of its purpose: ham radio lobbying/organization. Really, if you were a non-ham, would you link the name "American Radio Relay League" with Amateur Radio? I certainly was confused when I was a Novice and first got my hands on QST. Most probably, the name will change to "American Amateur Radio League" or something similar. no biggie. Only thing I'll be angry about is if they ditch the cool "diamond" logo for some nuevo thingy.

BTW, if over half of licenced amateurs in this country can't even copy a 3 wpm longwave beacon, it is only logical that even the august ARRL will become somewhat compassionate to their wish for CW-free HF operation. 10, 20, 30 years from now, we CW ops will be in the minority, and the no-coders will lead. Unfortunately, the days of CW's reign are over.

Ever have to do something you didn't want to, to achieve an end result? Maybe it was as a child, or taking a class in college that had nothing to do with your degree. Maybe your line of work requires you to do something you don't like. It's a fact of life. We all have to do things we don't like. Too many people are dumbing us down because they don't want to hear the whining, and want to be politically correct. This has become a no-skills hobby. Just memorize some answers from a question pool and get a friendly VE examiner and you're in.

Hello Jeff and Mike,

There is also the safety issue. I know of at least one airline accident that resulted in loss of life (Air Canada, about 1983) that was due solely to an in- flight cabin fire caused by careless smoking. (Somebody just had to light up in the john, then threw the stub in the trash - but it wasn't totally extinguished).

The trouble with substances like tobacco, heroin, and crack is that they are addicting for 99+% of the population. That means the user becomes so dependent that their rational judgement is seriously affected. Alcohol is addicting for some, but not all, people. In the general US population, anyway. (There is a genetic component to various substance addictions).

1983. Re: ham radio dying?

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-26 00:00:00 UTC
From: Jim Martin <jjm@shore.net>
Message-ID: <tKir2.339$h95.88452@news.shore.net>
Source record: 152412

It's not ham radio itself that is dying....it's the spirit of ham radio that is dying. It is unfortunate that so very many of those coming into the hobby today will never experience that spirit. It's what drove so many of the more experienced hams into the hobby. It's also what is causing the rift between the haves and the have-nots. There are so many who are stabbing the spirit of amateur radio in the heart...just to get into something they don't want to understand. They just want to be in it because their friend, or father, or mother, or roommate, or sister, or uncle, or mother's sister's cousin's roommate got into it and then they get swept up in the "we want it with little or no effort" crowd.

I mourn the spirit of amateur radio. I haven't been a ham that long, almost 20 years, but I can remember when it was a prestigious thing to get into. Now, I am almost ashamed of it.

1984. Found this interesting

The FCC has begun to crack its amateur enforcement whip. A New Jersey ham has been ordered off 40 meters until further FCC notice after allegedly causing interference to the ANARC Net on 7.240 MHz October 18. The FCC also issued an Official Notice of Violation October 21 against James C. Thompson, KA2YBP, of Waretown, New Jersey.

Thompson, 58, was accused by FCC inspectors out of the Langhorne, Pennsylvania, FCC office with illegally retransmitting programs from a Standard Broadcast (AM) station on 40 meters and willfully interfering with the amateur net. The FCC also charged Thompson with failing to properly identify.

It's the Commission's first amateur enforcement action since the FCC announced it would consolidate

<snip>

What I find really interesting about this blurb is the age of the offender. I had thought that most of this kind of activity was the work of people much younger. Why would someone who is "old enough to know" better do this type of thing?

I just finished reading all of the "anti-cw" bla bla bla. Wow, what a mixed bag.
But the truth is, morse code is the root of all forms of electronic communication devices. I've been a cw only operator for 30 years, and don't begrudge anyone
that wants to talk with their mouth or a modem. But those of you who don't use a key are really missing a unique form of expression. Copying one another's code can be like listening to and creating music.
(especially up around 30 wpm).

1990. VX-5R accesories big help needed! =)

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-27 00:00:00 UTC
From: firewave@REMOVE.videotron.ca
Message-ID: <firewave-2701992344040001@192.168.1.4>
Source record: 152219

Hi,

i m in the process of looking at a place to buy my VX-5R (i live in montreal (sorry for my english) if you have an idea of how i can order it without paying the local tax or if its from the US how not to pay the canadian tax (if any) when entering the country (custums taxes?) or any other suggestion for the cheapest price with the best things :))

I have questions about accesories mostly, because all i have is there name and i d like to get feedback from people who have them or who have pictures of them etc any information is useful! :-)

First of all, what is the VX-5R comming with? i heard it was charger/ battery/ antenna/ clip...Is that all? the charger is the radio right? or is it an external one? and does it comes with a DC cable?

Accesories:

What are the NC-72B(18$US?) (Charger for Lithium-Ion battery & Rx AC adapter) and CD-15(29$US?) (Rapid charger for use with NC-72B charger) for? Or more exactly how do they fit together? are they really useful together? and the NC-72B alone? How long for a full charge? (considering i heard the radio was taking 4.5hours) and what is the E-DC-6(7$US) (DC power cable; plug, wire and fuses only) cable for? doesnt that comes with the radio?

E-DC-5B(26$US) (DC cable with voltage regulator and cigarette lighter plug) is a good choice?

FNB-58LI(69$US) (Lithium-Ion battery 7.2v @1100mah) is there a better battery than that? is buying a second battery that useful (Read: will the first one die within a year or 2?) and if i buy a 2nd one is the above charger + quick charger add on needed?

FBA-23(25$US) (Case for 2 AA alkaline battery) What is the Tx power when i transmit with this? is there a better AA case? 4 or 6 batterys?

CN-3(8$US) (SMA to BNC adapter) self explanatory but im including it anyway for others who are looking for accesories :)

CT-44(12$US) (Converts to 2 pin microphone connections) Ok, what is this? is it only a one hole plug like the small sound plug used on Soundblaster/radio etc? or else, are there any earphone/mic like the MH-34B4B(30$US) (Compact speaker microphone) or the MH-37A4B(30$US) (Compact lapel mic with earphone) that also have a normal sound plug(so i can plug the radio into my soundblaster)? How do these or other

earphone/mic performs? any suggestion for a small earphone/mic on the shirt with a normal sound plug that works with a VX-5R ?

SU-1(35$US) (Barometric pressure sensor for pressure and altitude) Is that really accurate(how accurate in pressure and in altitude?)? is it worth it? does it use a lot more batterys? Is it conflicting with radio hardware or software modification? how does it plug to the radio?

CSC-73($19US)(Case for the VX-5 radio) is that case worth that much money? shoudnt i just make my own? :)

VC-25(62$US) (Lightweight VOX headset) what is this exactly? the same as the earphone/mic but for home use? (big headset?)

Computer DB9 cable...here i have a bigger problem...i dont want the cloning software i ll just enter things by hand but i d like to be able to modify the radio with the software mods...is there a place where i can only buy the cable at a much more reasonable price? (http://www.icongrp.com/~sllewd/pcware.htm this is a shematic i found i think its the same for the VX-1 VX-5 IC-Q7 and more)

Users: what are your impressions? how much can you transmit before the battery dies? etc? :-)

THANKS A LOT in advance for all the answers, it ll probably help other choose their accessories =)

Alexandre

A few months ago, I was gettting rather frustrated with CBRA.......
I was frustrated at his attitude toward many messages from inicent individuals.
As time progressed, I realised that I was letting him bother me.
Initially I stopped reading his messages and started to feel better.
Then I would respond to some of those he was irritating.
Soon I stopped doing that as well.
Why was I letting him get to me soo much.
Because I 'was' letting him get to me.
I rationalized, to myself, that he is only one person, why was I letting him get to me. I had better things in life to do.
I see his name on the newsgroup now. He doesn't bother me.
I am only sending this message to give some food for thought to those others that he is bothering.
Don't concern yourself with him.
In my 30 plus years as an amateur, I have met many people like him.
They thrive on the attention.
Why should you give him attention.
Why should you be part his daily meal.
Why should you let him bother you.
If he bothers you find some other aspect of the internet, or amateur radio, to develope an interest in until he no long bothers you.
You'll soon start to feel better too.
Start re-enjoying the internet and amateur radio.

Except with Ham radio, one is NOT charged a per minite charge like in
Nextel's 2 way radio DORK!!!!!! You are really stupid Al. And it takes a
lot for me to say that to someone in a news group.

Mike,

I think it is plainly very clear to all what you are attempting to do with your posts in the spirit of the above sections which I have quoted from one of your posts. You don't really have a serious point you what to debate in an adult manner. Your real agenda with these posts is to inflame, irritate, denigrate, annoy etc. people while placing yourself at the center of attention, just like the class clown from the old grade school days. The more outrageous your remarks (and the reactions you get from other people) must be satisfying some deep psychological need you have. I would also guess that this form of behavior (on your part) suggest a person with low self esteem too. Mike I think you need to get some professional help. In the mean time, the best thing the rest of us can do would be to politely ignore any of your posts.

Does anyone have any experience with EMI in a Ford Power Stroke diesel. Even when running only 5 watts on 40 meters the motor stumbles and loses a couple of hundred RPM. When you run 100 watts it stops. I have tried a lot of the easy fixes, toroids around the coax, power cord etc. These make no difference. I have not had any luck with getting information from the dealer either. Shielding the computer or wiring is no easy task on this truck, so I am trying to avoid countless hours of experimentation. Any help, or first hand experiences would be appreciated.

Thanks,
Paul K7PN

Indeed Ole MD comes though again. Lets according to Oh say the
ARRL handbook to pick a source F layer props is noted to occour at 2M
at time, certanly above 50Mhz, not to mention E layer, EME, Sats, rain
scatter and in the right places simply LOS will get across borders.
Or is the problem that MD does not know anything about the world
50Mhz. The quote was that RF does not respect broderies. That is
simply a fact MD. You don't have to like it, but it is a fact. you
can get into DX even. Above 50Mhz you just have to work a little
harder the world is not handed you like on HF.

>>> > RF respects no boundaries, that does not magicaly change at 50MHZ.

Yes it does. By choosing the correct frequency at the right time of
day one can have reliable distant communications. The sporadic events
one encounters above 6m are just that - sporadic.

>> What about aurora, meteor scatter, tropospheric ducting, and sporadic
>>E?

Those events are not reliable. What makes them exciting is their
spontaneous behavior.

>at time, certanly above 50Mhz, not to mention E layer, EME, Sats, rain
>scatter and in the right places simply LOS will get across borders.

Not very useful for consistent world-wide communications. If I want
a reliable daily Hawaii-California circuit, 20m CW is my choice.

Vero Beach (AP) - In a unexpected twist of events, Richard Lee, of the FCC, went to the house of Robert Youngblood, KT4TR, with a special letter. It was a proclimation signed by the FCC and The ARRL board of Directors - making KT4TR "Commander and Chief of 14.300"

After a successful appointment of K5ZU to "Commander and Chief of 3950" It was decided that someone should be chief of 20 meters. With the recent FCC enforcement and the recent FCC visit of WB2OTK's QTH, it was decided that KT4TR should take the post.

A party will be held this weekend at the KT4TR QTH. Guests will include DX302MAN, who will present this award, Talk show host Art Bell, Party music will furninshed by W2YEE, and the Guest speaker will be Brother Stair.

I have a Kenwood TS570 ham SSB connected to a Compac laptop. I have been trying to receive Weather Fax with this rig. My problem is with my receiver. I cannot hear anything on any of the WE FAX channels (I have a long list of stations, most of which broadcast continuously). My information is that the stations broadcast in FM mode. I do not know what WE FAX sounds like for sure but expect modulated tones indicating information.

Does anyone know of an FM station that I can receive to check my rig? I live near Philadelphia, PA USA. I have no trouble receiving or sending SSB but have not been able to verify FM receiption. I would like to verify whether the set is broken before incurring the service charge from the Kenwood repair center (for a set that is possibly working).

Any suggestions???
TIA

There is no charge for Nextel two way radio service. Only when you use the Nextel transceiver as a cellular telephone you get charged. All other two way communication is free.

Nextel sucks here in New England. The calls are delayed, the disconnection rate is high, and the interference is terrible. I haven't met one satisfied Nextel customer up here in the Northeast.

Dude! Slow down a minute... Did you try the charger, or are you
just having a fit because the terminal arrangement is different
and the ebp-28n is not in the list of batteries that came with
the charger?

Just looking in the catalog, it looks like the only difference
between the ebp-18n and the ebp-28n is the capacity. They are
both 12 volt batteries, so if the charger does the ebp-18n, is
should also do the ebp-28n but will take about 15 percent longer.

Now about the other terminal... do you even know what is is for?
Probably, it's not needed and the charger you have will work
just fine... but it sounds like you've already made your mind
up to unload it.

I would suggest contacting Ford in Detroit. They have helped several hams with running related and interference problems. For example, I have heard where they have replaced fuel pumps with other units to alleviate the whining noise in HF receivers. Wouldn't hurt to attempt it. 73 de N3WJA

Great radio. The ONLY thing that I got my knickers in a twist about was the battery and case. If there is moderate stress on the battery, it cracks the radio case, then you could have a bad connection and the battery will not stay seated. Don't put it in your back pocket... Duh! Been there, done that. So I put it in my top shirt pocket.

Also, don't drop the beggar out of your shirt pocket. If ya hit the ant, it is only a half ring of pot metal to hold the BNC. I laid epoxy around the BNC to lock it down again, and the wire to the BNC to PCB might work loose. Works like a charm after I dropped it and fixed it. It's gonna happen.

I KNOW it's not built like a Motorola brick, and perhaps with that in mind, I should have been nicer to the radio, but it worked so good in receiving and transmitting, I couldn't let it go.

I put one of those 1 inch high, (cannot recall the name-brand), tri-band ants on it to keep the radio profile short, and it worked fantastic. I thought it would behave like a dummy load, but I was wrong. Reception and hitting repeaters work fairly good.

The 300Mhz reception is marred by stong images from the VHF band. I thought I was listening to something, found out it was from the ham band. Oh well. It will not listen to the 220 band though.
But it does pick up the alarm remote for the car's key fob great. It's the only thing on the 300 band around where I live.

After unlocking the band stops, I found receive to be pretty hot for doing what it did. Of course you loose a bit at the edges, but not bad. There is a text file on the ARRL FTP site with the out of band specs listed.

You won't be wanting to rid yourself of this rig. It will be a work horse if you don't treat it like I did and drop the cuss constantly. I now have a lanyard now attached to it to help me from dinging it.

Hi, guys!

I have a Pentium-class PC and an FT-920. I never worked RTTY but I want to do it! Where can I find advices and tips for newbies on the net? Also I am interested if are there some softwares for Windows NT4.0 or Windows 95 to work RTTY without TNC, just with the PC and the rig / maybe through the soundcard.

Thanks for any help.

HEy Dan the Man. Your friend BUCHU DIEN CAI DAU
agrees.

dx302 man???? more like dx302 school boy. no call operator,illegal use of others call signs. Little school boy going about harassing combat vets. Not too smart.

All transmissions without a call sign are QRM. When someone else is the control operator they need to be present not in another state or "downstairs paring another high ball"Nor would a good operator encourage a child,Franky,to violate regulations. I know what frankey needs. A trip someplace.Someplace with a an old Sergeant wearing the old round brown.I thing there may be hope. A good DI could have a shot at making a human being of him. Once you do that last pass in review you are no longer a maggot. A sissy,a miserable excuse for a human being.Once that occurs you become a part of an exclusive group of men. Untill then a maggot.

Semper Libre

The IC-2000H is very similar to most other VHF/UHF FM radios, that it
is a single-loop, single VCO PLL design that has a moderately long
PLL lock-up time (I believe greater than 100mS). During this
lock-up time, the transmitter bounces onto frequency. It doesn't
sound pretty and the speed with you can send is quite limited.
Before you try operating Morse with the radio by keying the
PTT line, try listening to the signal. You can get a much better
transmitted signal by keying the driver stages in the transmitter,
holding PTT down the entire time, but this might not be trivial.

What are you going to do for a receiver? The FM receiver won't
make much sense, but it occurs to me maybe you could use the
AM receiver mode with the addition of a 455KHz BFO. You've
got to build this carefully if it is to be even remotely reliable
in a mobile.

> I haven't even looked at the schematic yet but was thinking about a varicap
> diode tapped into the LO and using a pot to swing it up and down. Can
> someone give me a sanity check on this? Am I headed in the right direction
> or is there a better way?

Not for transmit, maybe for receive, but I think you're better off
with a tunable BFO. It won't work for transmit because there's no
LO to adjust, the loop synthesizes on-frequency.

And for those who didn't go the interesting web site recommended at the
beginning of this thread,

http://www.cadex.com/cfm/index.cfm?Pg=314&Lp=55&Db=&Mo=

Overcharging is particularly bad for LiIon batteries; can cause metallic Li to
plate out, which apparently is bad and potentially dangerous. Trickle
charging ala NiCads is verboten.

OTOH, LiIon chargers take this into account. So, don't try charging them in any
charger that wasn't designed for the job!

Greeting to the group,
I have a Kenwood TS-430s and a Solorcon 10,11,12 meter vertical antenna antenna is less that a month old at the time of posting and really works great!
The radio has been mobile before and looks like it from 1-10 I'd rate it a 7-8(hence the price) but works fantastic and comes with docs, mobile mounting bracket and stock hand mic. This radio would be perfect for a new Ham on a budget.

I would like to sell or trade for: Cash $350 + shipping
or trade for a 2 meter amp like a "Mirage 2516g" 25 in 160 out and we each pay our own shipping.

If interested, shoot me an email and we can talk it over
I'll guarantee against DOA!

>
>Any suggestions???
>TIA

FM WEFAX is recieved via USB. I am a little fuzzy on EXACTLY why it is called FM, but trust me, that there is good old Upper Side Band. You may be tuning to the wrong frequency, too. Tune around 1.9 Kc BELOW the listed frequency. Ham convention is that we tune to the frequency of the supressed carrier. Commercial practice is that the frequency is listed as the actual RF frequency of the space tone, or in the case of FAX, whitest white.

You might also let us know if you are a ham, how much experience you have with radio, etc, so we don't neglect to explain things that are obvious to us, nor waste bandwidth explaining basic topics that you already know.

Your geographic location has a lot to do with the stations you will receive, along with the time of day, solar activity, desired recieve frequency, location of the station, and to a degree, the weather. Propogation is not something that can be well explained in just a few paragraphs. If you are a non-ham interested in radio, you might consider adding the ARRL Handbook to your library. It is sort of a mini-encyclopaedia of topics radio, and though aimed at the Ham, it is of inestimable value to the non-ham as well, often consulted by electrical and electronic techs and engineers in the performance of their jobs. A fairly good explanation of HF propogation is presented, as well as many other topics that will improve your enjoyment of your hobby.

Another thing... many coast stations no longer broadcast FAX, and many have cut back their operations, even doing away with human operators. consult a current issue of one of the shortwave listening magazines... see what others are hearing and where/when they are hearing it.

You haven't mentioned whether or not you are hearing other non-fax signals like RTTY, CW, etc. Also, do you know what a fax signal sounds like? Typically, it

sounds like static or white noise that has a sort of rhythm in it, dominated by a loud click, with a period of 1/2 second. kind of like shshshshCLACKshshshshCLACKshshshshCLACK, repeating itself twice a second.

Hope this helps. If reading this helps to narrow down your questions to something more specific, please post again and we will see what else we can come up with.

Anyone have any experence with the IC-R2? It has receive from 500khz ti 1.3 Ghz (minus cell of course). I saw an ad for it and checked out the web site http://www.icomamerica.com/new/
Just wanted to see if anyone has one and if they like it.

2049. formula for bearing bewteen two locations ?

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-27 00:00:00 UTC
From: Jesper Kristiansen <jkristia@yahoo.com>
Message-ID: <36AF9733.EE59E0F8@yahoo.com>
Source record: 152360

Hi

Is there anyone wh knows the formula for bearing between two points
given by longitude and latitude,
og QRA locators. I know how to convert from locator to longitude /
latitude, and I have the formula for
distance, but I can't find the formula for direction. I have searched
the net, but without any luck.

Thanks
Jesper

IC-T2A FM 2m handheld (136-174 RX including auto weather stations
scanning feature). Transmits 140-150 MHz out of ham band. (Caution:
It is illegal to transmit outside of non-type approved band...). You
do not need battery case because battery attaches to the transceiver
itself. Uses 8 batteries, 1W low 4.5 W high. Extra Radio Shack
speaker mic and carrying case will be attached free.
Asking $150 Canadian or $105 US. Serious inquiry only. First come,
first serve with price listed. Payment can be made by money order,
bank draft, certified cheque or bank transfer. No personal cheque
please. Please send me an e-mail if you are willing to take it
"as listed" to: webmaster@radiotelephone.net.PAS_DE_PUBLICITE
Please do not forget to remove ".PAS_DE_PUBLICITE" before replying.

Thanks.

well, it should be obvious that they have to have the film shot well before performance to account for editing, mixing, and such that goes on.

the earlier the show is in the season, the longer ago they usually shot it.

Collins certainly stays up with the state of the art. But then most folks not in it for the money don't have 4 or 5 grand to put down for a receiver either.

Maybe a visit to http://www.collins.rockwell.com is in order.

Jones wrote in message ...

another "induhvidual" here. probably low radio experience.

whole number caps are pf.

fractional numbers are uF.

unless otherwise noted.

this saves a lot of time for a draftsman putting down all those mu's and p's
with his leroy set. (and plotter time too..)

that's where it comes from. the standards for how you should typeset a
value are different yet.

the space is used because both comma and period are used as a "decimal
point" so it's left out to avoid confusion.

most parts when all this was decided were +/- 20% so 2 digits were all you
need to represent all the standard values (so that's how 103 can be turned
into 10000 pF easily enough). Parts with lower tolerance have to use more
numbers.

Many Garmin GPS units can have updated software downloaded into the unit, providing corrections and additional features. It requires a computer cable, costing about $40, and the proper software. I will update your GPS for $15 plus shipping. Usually done in one day. To see if updates are available for your unit, see the Garmin site at http://www.garmin.com/support/download.html

> suggesting a schematic for a simple but adequeate front-end?

I don't think the front end is saturating, I think it's more likely the
MC13135 is saturating. This is a very low power device drawing 3.5 ma
that seems to be intended for toy walkie talkies. The spec sheet says
the input 3rd order intercept point of the 1st mixer stage is -17 dBm
referred to the input. That's not too good for a communication receiver.

If you put a preamp in front of it, then the IP3 referred to the preamp
input is probably below -30 dBm. (It's lowered by whatever the preamp
gain is.)

Also the 2nd mixer has an even worse input IP3 of -27 dBm or -40 dBm with
the preamp! Anything that gets thru the 1st IF filter will really overload
the receiver!

I think the bottom line is you should choose higher level mixers for
your receiver if you want to operate around even a 2 Watt transmitter.

Realistic (Radio Shack) HTX-100 10 Meter Mobile (with 11m coverage)
Realistic (Radio Shack) TRC-496 Full Featured AM Mobile 40 channel CB

I am asking $140 for both units. (See below...)

Realistic HTX-100 10 meter SSB/CW mobile. Unit tunes 26-30 MHz and puts out 25 watts (5 on low power.) 10 memory channels, RIT, RF Gain, Noise Blanker, etc. Has one small problem, the volume control doesn't seem to function which means no matter where you turn the VOLUME knob, it stays the same (at a pretty comfortable base station level, but the audio is too weak for mobile usage.) I simply hook it up to a cheap pair of RadioShack amplified speakers and works great (or you can even just use a pair of headphones without any audio amplifier) This has absolutely no affect on the performance of the rig, the incoming and outgoing signals are loud and clear all the time. I was told this can be easily fixed, but I don't have the tools to do that. I can also get the schematic for this radio (so you can easily fix the audio), and I do have the manual. Unit comes complete with microphone (with freq/channel up/down buttons) and power cord. Serial number 95004545. These units go for around $120 used.

RadioShack TRC-496 Full Featured AM Mobile CB. 40 channels AM, 10 WX channels, digital RF Gain and Mic Gain (all digital buttons and settings, not knobs), memory channels, Dual Channel Receive Mode (with both channels readout at the same time), Busy Channel Scan Mode, Clear Channel Scan Mode, NB/ANL, Instant Ch 9/19 button, PA function, Mic with channel up/down buttons, very nice Amber LCD Data Bank Readout (excellent for dark viewing) Excellent condition with mounting hardware, power cord, manual, and mic holder. This unit has almost everything you would want in a AM CB rig and is in PERFECT condition. Serial Number: 65004694 RadioShack catalog price: $119

$140 plus shipping for BOTH units shipped to the 48 states. Money order only, please (sorry, no CODs). Sorry, no trades. Package deal only. If you are interested, please email me. Thanks for reading.

Message-ID: <19990127235836.21004.00000265@ng94.aol.com>
Source record: 152229

A couple of months ago, I got an Azden AZ-61 HT at a local auction. It was mint condition, in the original packing, even had the battery fully charged. The previous owner was swapping over to all Icom. There was no manual, but I figured I could fake it..I figured wrong. While I can do fine on the 2 repeaters programmed ni that are local to the Boston area, I can't do anything else. Buttons like "TM/WR" and "MAO" (isn't that something that some tranquilizers inhibit?) are pure gibberish to me.
What I'm looking for is either a mannual or at least some clue to how to use all the bells & whistles. Thanks much.

Source record: 152230

Could you have in mind the National Weather Service SKYWARN program? I'm in the Boston area rather than in the Gulf (since '66 anyhow; Texan before that), but there's a very active group of ham spotters here using the local 145.23 and 146.64 repeaters to gather info & relay it to the Taunton, MA NWS office. Training consists of a 4-hr session to make certain we know what to report and what the different types of storm look like. So far, I've only been involved in spotting 2 rotating wall clouds (triggers a tornado watch) and one brief funnel cloud. On the other hand, I only got my training last August.

I think there's a NWS web site that includes info on Taunton and the SKYWARN setup.

Good hunting!

>
> The ARRL board makes me want to vomit.
>

Yo, Save CW,

That's quite the editorial. Too bad you don't give your real name,
whassa matta, you no like to mix it up with the big boys cause
you're too cowardly to post your name? You have zero credibility
when you hide behind your keyboard and use idiotic emotional
diatribe instead of a logical argument.

Just how is it that CW will save ham radio? By making people
pass morse code tests so they can get on 3.950 and 14.313?
Those clowns all passed code tests, just how the !@#$%^&
will it prevent more clowns?

While you're at it, answer me this: If the Coast Guard, FCC
and Congress saw fit to do away with morse code on the high
seas because they are convinced it is no longer required for
SOLAS (safety of life at sea) then why the !@#$% should it
be required to pick up a microphone and talk on HF?

The answer is simple and it has nothing to do with CW. It's
called lack of self-discipline. The troublemakers on the bands
are troublemakers because their mothers didn't kick their teeth
in when they got sassy. They became playground bullies and
graduated into neighborhood bullies and then got ham radio
licenses, then ultimately hide behind keyboards and use phoney
names. These are the same idiots who cause QRM on the ham
bands and bootleg on illegal frequencies, no self-discipline and
no respect for the law. Simple, yes? Wanna save ham radio?
Stop being a coward and lobby for tougher technical exams and
quit whipping that dead CW horse. It's dead, bury it already.

In a message dated 96-07-24 08:18:29 EDT, Scott Rosenfeld wrote:

<< and ended up with a 45-minute QSO with a gentleman in Huntsville, AL.

It was so refreshing and invigorating of a conversation that I truly hated to
close down the shack.

Yes, it was CW. Yes, 25-30 wpm. Definitely not boring - I filled out the card
then and there, and sent it off the next morning. >>
++

I have always enjoyed *conversational CW*, and advise it to people who want
to increase their CW speed. Put the paper and pencil away, kick back and
shoot the breeze, with CW.

Shortly after I upgraded early 80's, I was listening to a conversation (A3)
where they were talking about CW. One gentleman said that he has known how
to talk almost all of his life, but he really had to work at learning CW and
getting his speed up to upgrade. So that he doesn't lose his CW skills from
lack of use, he always gets in 3 CW QSO's before switching to phone.

"GREAT IDEA", I thought. "I think I should do the same". But my 3 CW QSO's
(15-20 wpm) ended up lasting several hours, and then it was time for bed.

So I ended up keeping my microphone in the box in a drawer, and pulling it
out from time to time to see if it still works.

2080. Re: formula for bearing bewteen two locations ?

Sure, Jesper, though it is rather complicated.

For short distances, simply use plane geometry. For anything over a couple hundred miles, though, you are necessarily dealing with spherical trig.

Your bearing to the other station will be 000 or 180 degrees, plus or minus a value 'C'. By inspection, you determine whether to use 000 or 180... if the other station's Latitude is SOUTH or your own, it is 180 and vice versa. If the other station is EAST of you in Longitude, the value 'C' is added to 000 or subtracted from 180. If WEST, subtract from 000 (use 360 instead to avoid the negative number) or added to 180.

Tan(C) = Sin(DLo) / ((Cos(L1) x Tan(L2)) - (Sin(L1) x Cos(L2))

Where DLo is Difference in Longitude, L1 is your Latitude, and L2 is the Latitude of the other station.

A quick and dirty method of solving is to use one of those little hand held GPS receivers. Set your position as a waypoint, and the other station as a waypoint, and let the machine do the work.

A curious thing... you might think that the bearing from your station to the other would be exactly reciprocal of the bearing from the other station to you, but it ain't so, except when the two stations are on theEquator or the same Longitude. Also, You would think that anywhere on the path between your stations, the bearing to the other station would be the same as it is from your station, but that ain't so either. This stupid sphere we live on screws everything up, heh heh. The Great Circle is not curved or bent in relation to the surface of the eartth.. the earth is bent under the Great Circle!

Check this out... Take a straight strip of stiff paper and line it up on a globe between two points of dissimilar Lat and Lon. Carefully measure the angle between the Meridians (Longitude Lines) and the edge of the paper. It changes as you progress along the paper. Also note that on the globe, the line formed

by the edge of the paper is straight, but if you transfer the intersections of the line and the meridians or parallels of Latitude to a Mercator Projection, your common flat map, the points are on a curve and no longer straight.

If you perform these calculations often, consider writing a small program in one of the Basic languages to do the grunt work for you. There are also many progs out there that will do this for you. Such involved number crunching can take the fun out of radio if you let it.

Hope this helps.

Like it takes any talent to work DX on 20. This is a satellite newsgroup,
your comments are hardly appropriate. BTW how do I determine the needed
Doppler shift to work a bird programmatically?

I am beginning to think these little outbursts are from a commercial
lobbing group trying to fragment ham radio so they might acquire the
frequencies.

If a CBer (like me) were tired of the fighting on 11 Meters and wanted to try amateur radio and saw this mess, he wouldn't want to invest in the code anyway. I can pass the technical parts of the tests, need to study the rules and want to learn the code (EGO!) maybe I'll like maybe I won't.

I disagree. Ive been licensed for many years and I can tell you that if Hiram Maxim where still alive, he'd want the hobby to continue to expand in many diverse directions. It sounds like you have "my fathers syndrome". He was a man that made a person do something because "thats the way he had to do it". Times change and people change. Its time for a big change regarding licensing practices.

What happens when digital transmit transceivers come out in a few years? Are all those Extra class license holders (including myself) going to be tested to see if they know all the ASCII characters in binary code????? If that we ever required you'd see all the higher class license holders picketing the FCC in protest by torchlight.....Its time for a new generation with new and different ideas to enter into our hobby.....It was time 10 years ago but the ARRL was still controlled by too many "old timers" then.

It's FM because it is - the information is in the frequency changes,
not the amplitude. To receive it you heterodyne it to audio (e.g.
with an SSB receiver), where certain audio frequencies then become
black, white, and shades of grey.

There's certainly no mistaking the sound...

CW is a MODE. Nothing more, nothing less. And as such CW should not be given any special consideration over any other mode.

You talk about "Dumbing down" the ham tests. I couldn't agree more. But why is it only a travesty when we talk about reducing (or eliminating) the CW requirement? Why do the vocal nay-sayers have nothing to say about the fact that the "theory" tests have become nothing more than a formality. People memorize the questions and answers, pass an easy multiple guess test, and presto!, they're hams. I guess it's ok as long as they sweat and learn CW.

I would much prefer the elimination of CW as a requirement, and at the same time, go back to comprehensive theory testing. No more multiple choice. Put those formulas to work, draw a colpitts oscillator schematic, design a simple 2 transistor QRP transmitter from memory. That way, we can be fairly certain that the new "hams" will have a better knowlege of radio, not just one mode of it.....

Nope, Jeff's got it right when he said:

You need to step back so as to get a global view of why the
code requirement exists for HF privileges. RF at HF respects no
boundaries, and as communicators first and foremost, hams the
world over should have at least one mode in common. Right now,
there is only one mode *all* the world's HF-licensed amateurs hold
in common: CW. Whether one chooses to use it or not does not matter;
if the need arises he has it available to him (maybe at a slower
speed than when he was first licensed!). The ITU has this global
view while many individuals have only an insular nearsightedness -
their own personal goals out-weigh those of the global amateur
community.

Your so called Japanese HF license boils down to a US style CB license
if you read the fine print. Unfortunately this what the ARRL has been
spooked into going after, turning its back on the desires of the
majority of its membership.

Hi Miles,

Go ahead and try for your license. Don't let the butt-heads in this news group
scare you off. It just seems like some other people can't accept what others choose
to do with their Ham ticket or how they got one.

I know this must have been asked a zillion times...but i couldnt find it anywhere here or dejanews or altavista etc...

Could anyone point me to a place where i can find Mod(s) for the ICOM IC-T2A radio? (is it the same as the T2H?)

thanks a lot,

alex

I have the ARRL Repeater Directory. I think it was around $8.00. It's very small (3x4 inches and about an inch thick?) and fits in my glove compartment nicely. It lists thousands of repeaters across the US separated by Band, State, City, and County. I use it when traveling. Is this what you had in mind?

Greg OM,

Does the rig receive OK? If so:
Since you have proper idle current, the final tube voltages are probably
OK
Make sure the jumpers are in the external VFO plug on the back.
Verify plate and screen voltages are present on the 12BY7A driver, and
that
you have plate current on the 12BY7A. Troubleshoot the XMIT RF drive to
the
12BY7A.
The TS820 and TS820S are excellent, rugged and REPAIRABLE rigs. I have
been
using mine for almost 20 years now (thousands of hours on the air on CW and
FSK), and I would not part with it. It also has FSK (which the
TS520/530/430/440/830
do not), and is an excellent rig for Pactor/Amtor. Lastly, this rig can
be converted to
the WARC bands too.

You'll get it working. Enjoy!

73,
Don, W6JL

COLOMBIAN QUAKE SPRINGS HAMS TO ACTION

Amateur Radio nets activated in short order on 20 and 40 meters following an earthquake January 25 in West Central Colombia. The quake, measuring 6 on the Richter scale, killed more than 1000 people, injured thousands of others, and caused major structural damage. The Salvation Army reports more than 150,000 people missing in Colombia's mountainous coffee-growing region. The initial tremor and some aftershocks were felt in the capital city of Bogota. News media in Colombia were reporting "chaos" in the city of

Armenia, where some residents stormed and looted stores and supermarkets when relief supplies failed to materialize. Martial law was declared there.

"In most cases, the problem is in the distribution," said Dallas Carter, W3PP, in Laurel, Delaware. Carter monitored some of the first reports of the quake via Amateur Radio on a 20-meter relief net run by HK3SA and HK3RQA and has been assisting as a US net control--sometimes for as long as 12 hours a day. Amateur activities were taking place on 14.347 MHz and locally on 7.085 and 7.090 MHz.

Ham radio was a major source of information out of the affected area in the hours immediately following the disaster. "They are requesting blood, water, medical assistance, rescue equipment," Carter said this week. He said HK3SA was flown into the city of Armenia and has set up an HF operation to maintain contact via 40 and 20 meters to directly handle international health-and-welfare requests as well as keep in touch with the capital. He said 2-meter repeaters were being used for local emergency coordination.

The Salvation Army Team Emergency Radio Network (SATERN) has established contact with hams in Colombia and a net on 14.265 MHz and was helping with inquiries about victims. At this point, most of the health-and-welfare traffic was coming into the US from the stricken regions, while not much was going into the area. The Salvation Army's Michael Koenemund, KB1CKF, reported that the Salvation Army had dispatched a 10-member assessment and first response team from Bogota to the affected cities of Pereira and Ibaque. "The team will render primary services, including food, water and shelter," he said.

The International Red Cross in Colombia has dispatched a team of 80, plus relief equipment and supplies "There's an extreme shortage of doctors," Carter said. "They're still digging people out."

The ARRL has offered its assistance to the Liga Colombiana de Radioaficionados (LCRA), the League's IARU sister society in Colombia.

Media in Bogota have set up Web sites with information from the affected areas including lists of individual names and status. See http://www.rcntv.com.co or http://www.eureka.com.co/terremoto/ (Spanish) or http://www.eureka.com.co/terremoto/indexEn.html (English).

TORNADOES, CLEANUP KEEP DIXIE HAMS BUSY

Additional severe weather hit parts of the South January 22, less than a day after tornadoes killed eight people in Arkansas and injured many others in Arkansas and Tennessee. Amateur Radio operators volunteered as needed in the wake of the January 21 tornadoes as well as the storms the following day reported in Louisiana, Texas, Mississippi, and Alabama. Few additional injuries and no deaths were reported, and damage for the most part was minimal.

Arkansas Section Manager Roger Gray, N5QS, reported several amateurs working with cleanup crews, disaster assessment teams, or Red Cross mobile feeding stations after the January 21 tornadoes that swept the Little Rock area and

badly damaged the town of Beebe.

ARES nets were activated on both local VHF repeaters and on 75 meters after more than 30 tornadoes touched down in White County. "I personally saw one pass within one mile of my house and within a half mile of [ARRL Vice President Joel Harrison] W5ZN's house. Gray says White County ARES closed down January 26 after nearly a week's operation. Gray reports that on several occasions as the storms developed, various net control stations were forced to take cover and hand over NCS duties to another station. White County EC James Wiles, KK5WM, in Beebe, was forced to seek shelter after his home suffered tornado damage. "He was later able to return to salvage his radio equipment and set up a station at a shelter and man it single-handed through the night," Gray said.

A health-and-welfare and disaster recovery net evolved from the storm-spotting net after the storms had passed through, and net control moved to Red Cross headquarters. Gray said more than 70 hams assisted with traffic for the Red Cross and Salvation Army as well as health-and-welfare inquiries, emergency, and general disaster recovery. "Three crossband repeaters were in operation to allow low-power stations to access distant repeaters," he said. Hams also made temporary repairs to the local ambulance service base station antenna.

In Tennessee, Madison County EC Kenny Johns, AB4EG, worked with volunteers from several areas to assist the Red Cross with damage assessment in 19 affected counties. Johns said in Jackson and in Madison County, more than 300 homes, apartments and mobile homes were completely destroyed. Another 357 received extreme damage. ARRL Delta Division Vice Director Henry Leggette, WD4Q, visited the Jackson area January 28 and met with members of John's club, the West Tennessee Amateur Radio Society, who were coordinating activities on VHF and UHF. He reported that more than 200 hams helped out in some way after the storms. "This made me very proud to be an Amateur Radio operator," Leggette said.

The town of Clarksville, Tennessee, also received significant damage from the January 22 storms. Under the direction of Albert Furlow, KA1FFO, members of the Clarksville Amateur Radio Transmitting Society's (CATS) disaster team activated a SKYWARN net. After the storm, CAT members worked with the Red Cross and emergency officials, passing spot information and later assisting with damage assessment. Furlow reports hams also will help with the cleanup effort this weekend.

Also on January 22, National Red Cross Headquarters requested Virginia ARES to follow up after a reported F4 tornado struck the northeastern Mississippi town of Corinth, cutting off contact with the community of approximately 14,000. The Red Cross contacted Virginia ARES to attempt to get information on possible damage and injuries. Volunteers were able to get information via the Mississippi Emergency Net indicating trees and power lines down and some property damage, but no deaths and only one injury. Virginia ARES relayed all information to the Red Cross, which indicated that it was the first news they had received from the affected area.

FCC COMES A CALLIN' IN THE CAROLINAS

FCC engineering and legal staff conducted unannounced Amateur Radio station inspections January 21 and 22 in North and South Carolina, reports FCC amateur enforcement honcho Riley Hollingsworth, K4ZDH.

"Commission personnel inspected the stations of John A. Abernethy, K4OKA, an Extra Class licensee in Hickory, North Carolina, and Richard Whiten, WB2OTK, a General Class licensee in Easley, South Carolina," Hollingsworth said.

In both visits, FCC officials were accompanied by local law enforcement personnel. Hollingsworth said both amateurs cooperated with the inspections, which lasted approximately two hours apiece. FCC officials said that both operators "were the subjects of many complaints about their operations on the 75 and 20 meter Amateur bands." The officials said the results of the inspections were "under review," and declined further comment.

Earlier this month, the FCC issued a stern warning to an Indian River County, Florida ham who, the FCC said, had been using the amateur airwaves to transmit information on, among other things, the credit reports, criminal records, and mortgage foreclosures of other hams and their families. "You have apparently made these disclosures and broadcasts for the purpose of deliberately and maliciously interfering with licensed Amateurs operating on those bands, and for harassment or perceived retaliation," said the letter, signed by Hollingsworth.

"We view this matter as extremely serious," he told the ARRL. Hollingsworth called the alleged operation "contrary to the purpose of Amateur Radio" and said that it "endangers the entire Amateur Radio frequency allocation internationally."

LEAGUE SEEKS ULS CHANGES

The ARRL has asked the FCC to make some minor alterations to its impending Universal Licensing System rules. The ULS, being phased in by the FCC throughout 1999, will consolidate application forms and procedures for several FCC services. Among other things, it will replace the venerable FCC Form 610 series with a new Form 605 and will provide for electronic filing, modification, and renewal for amateurs.

The ULS Report and Order was issued last October by the FCC, which also took the occasion to amend the rules to make it easier for foreign hams to operate temporarily in the US.

In a petition for partial reconsideration, the League said it wants the FCC to continue to issue paper license documents; to come up with a way for applicants not having a Taxpayer Identification Number--typically a Social Security Number--to meet ULS requirements to provide one; and to include on Form 605 a section for Volunteer Examiners to certify that an applicant has met the requirements for a new or upgraded ham ticket. In addition, the League plans to ask the FCC to restore wording in Section 97.15(e) that references the limited federal preemption, PRB-1. The section was inadvertently deleted during the Commission's redrafting of the rules to accommodate the ULS changes.

The ARRL already has expressed concerns over FCC suggestions that the agency might do away with paper license documents altogether and rely instead on the "license grant"--the virtual document that resides within the FCC's computerized amateur database. In its latest filing, January 12, the League said that in some states that regulate possession of scanning receivers but exempt amateurs, inability to produce a license document could result in "arrest and criminal prosecution as well as seizure of equipment by local law enforcement." The League said hams operating overseas also often must produce a paper document. The ARRL noted that the CEPT agreement requires US hams traveling in CEPT countries to possess a US government-issued license document and that ITU regulations "appear to require" a government-issued license document.

The League also called on the FCC to devise a means for those not holding a TIN--such as foreigners who hold US ham tickets--to comply with the ULS rules which require an applicant to provide one. "One possibility for these persons would be for the Commission to issue them some substitute TIN or some other type of registration number," the League proposed.

Finally, the ARRL pointed out to the FCC that neither the main Form 605 nor the Amateur Radio Schedule D contains a section for VE certifications and called on the Commission to modify the form to include the section as it now appears on Form 610.

SAREX WORKING GROUP CHAIRMAN CALLS FOR COMMON SENSE AND COOPERATION

The Chairman of the Space Amateur Radio EXperiment Working Group, Roy Neal, K6DUE, has lashed out at those he says have "sought to destroy" the Amateur Radio International Space Station (ARISS) program. SAREX, an ARISS partner, coordinates the Amateur Radio efforts of AMSAT, ARRL, and NASA for manned space flights.

"I have been distressed by the recent actions taken by some individuals," he said. "They are waging a war on our international cooperation." Neal's remarks, issued January 18 as a "White Paper to ARISS" focus on ARISS' concerns about the direction of the independent so-called MAREX-NA project headed by Miles Mann, WF1F. Neal does not mention Mann or his program by name, however.

"NASA and its partners have enough problems putting together an international space station. NASA does not want or need problems with Amateur Radio," Neal said. "These individuals have written messages saying they plan to create such problems if they don't get their way."

With cooperation from some Russian space officials, Mann and his colleagues recently deployed an amateur slow-scan TV system aboard the Mir space station. The system has been operating on Mir's normal 2-meter packet and FM voice frequency, however, instead of on the 70-cm frequency coordinated for the SSTV system.

"Unfortunately, they apparently have little appreciation for the complexity, level of detail, and effort required to ensure a permanent Amateur Radio presence in space," Neal said. "These people have demonstrated their willingness to flout the coordination program by announcing that the SSTV

system will continue to operate on 145.985 MHz instead of the 70-cm frequency coordinated for that purpose."

Saying the time has come "to turn off the nonsense and turn on the common sense," Neal said he does not plan to engage in a contest of words "which no one can win." At the same time, he said, the door is open to consideration of all viable Amateur Radio projects for the International Space Station.

"The ARISS team welcomes participation by all," he said, in an apparent reference to claims by Mann that ARISS was turning away outside projects.

ARISS partners met last weekend in Houston, Texas, to discuss project status as well as plans for the initial, interim, and permanent deployment of Amateur Radio equipment aboard the ISS.

SOLAR UPDATE

Solar sage Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity was down slightly this week when compared to last. Average sunspot values were 35 points, lower, but solar flux was off by less than 6 points. Average solar flux for the previous 90 days was 140.1, and daily solar flux values were below this level on the last three days of the reporting week. Expect solar flux to continue lower at 112, 110 and 110 for January 29-31. Planetary A index for the same three days is projected to be 8, 5 and 8, which is not too bad for the CQ WW 160-Meter contest.

The projected solar flux for January 30-31 of 110 is quite low, all of 30 points lower than the average for the 90 days previous to the reporting week. Flux values also dipped down to this level on January 10, but prior to that had not been this low since late October. Solar flux is expected to rise next week, to above 130 around February 8, above 140 three days later, and around 155 by mid-month. Look for unsettled geomagnetic conditions around February 9-11 and February 19.

During the same week last year average sunspot numbers were 17 points lower, and average solar flux was about 55 points lower.

Sunspot numbers for January 21 through 27 were 134, 141, 117, 107, 81, 47, and 64, with a mean of 98.7. The 10.7-cm flux was 175.3, 177.9, 165.9, 161.8, 138.1, 133.2, and 125.4, with a mean of 153.9. The estimated planetary A indices were 5, 10, 16, 13, 9, 4 and 9, with a mean of 9.4.

IN BRIEF:

* This weekend on the radio: The CQ WW 160-Meter DX Contest (CW) is January 29-31. Also look for the REF French Contest (CW), the UBA Contest (Phone), the YL International QSO Party (CW) and the Kansas QSO Party. See January QST, page 84, for more information. Just ahead: The North American Sprint, the Minnesota QSO Party, the Delaware QSO Party, the Vermont QSO Party, the New Hampshire QSO Party, the FYBO Winter QRP Field Day, the Ten Ten International Net Winter Phone QSO Party, the YL-OM Contest, and--last but not least--the Spring Classic Radio Exchange are February 6-8. See February

QST, page 91, for details.

* BT1WW on 160: The Chinese Radio Sports Association (CRSA) will air a special event experimental station for 48 hours to participate the CQ WW 160-Meter Contest from Beijing. What is unique is that the antenna is some 300 feet above the ground, thus it can almost see the Statue of Liberty! But the sad news is that the location is rather noisy and mounting a receiving antenna is impossible. So you may hear BT1WW, but you will have to boost your signal to get through to downtown Beijing. The operators of this event include BA1AB, BA1OK, and OH2BH.--Tim Totten, N4GN

* Vanity update: The FCC office in Gettysburg reports it has completed processing vanity applications received through January 7. In a processing run January 21, the FCC issued 169 license grants. Another 158 applications landed in the work in process, or WIPs, stack.

* 5 MHz experiment--no additional help needed: In response to inquiries about the ARRL's recently granted WA2XSY Experimental Radio Service license for investigations on 5 MHz, the League has been requested by FCC staff to advise that no additional participants are being sought at this time. Additionally, operating schedules have not been established but will be announced if monitoring reports are solicited as part of the experiment.

* ARRL E-Mail Forwarding Service: Starting February 1, ARRL members will be able to sign up via the Members Only Web Site (http://www.arrl.org/members-only/) for the League's new E-Mail Forwarding Service. The forwarding--or alias--service is available at no additional charge for ARRL members. It will provide members with a uniform "callsign@arrl.net" e-mail address that remains the same even if the user changes e-mail service providers. Details are available on the Members Only Web Site at http://www.arrl.org/members-only/emailfwd.html. The service does not affect usability of your original e-mail address, which will continue to be the one reflected in outgoing messages.

* King Hussein, JY1, back in US: Jordan's King Hussein, JY1, headed back to the US January 27 for what press reports are calling "urgent medical treatment" after he suffered a relapse in his recuperation from non-Hodgkins lymphoma, a form of cancer. Before leaving Jordan, the king named his eldest son, Abdullah, as his future successor and as regent in his absence. Hussein, 63, had returned to Jordan January 17 after six months of chemotherapy at the Mayo Clinic in Rochester, Minnesota. He'll return to the clinic for further treatment. During his earlier stay in the US, Hussein had occasionally taken to the amateur airwaves, much to the surprise and delight of those who encountered him--usually on 20 meters.--from press reports

* SUNSAT launch delayed: At first frustrated by numerous weather-related delays, the Boeing team that's attempting to launch a Delta II rocket carrying the SUNSAT amateur satellite and other payloads aloft ran into a technical snag during the January 28 launch attempt. Eric Lemmon, WB6FLY, reports: "At 1044 UTC on Thursday, January 28th, the Delta-II rocket experienced an engine cutoff immediately after the engine start command was issued. The shutoff is sent automatically when an anomaly in the engine

sequence is detected. The cause is currently under investigation. No damage occurred to the rocket or to the three satellites that comprise its payload. The delay will probably be a few days, and no further information is available at this time."--WB6FLY

* K6STI goes out of software business: Ham radio software developer Brian Beezley, K6STI, has gone out of business. Beezley says he's dropping distribution and further software development as a result of the piracy of his RITTY radioteletype program. He says an overseas ham broke the copy protection on a demo version of his program and posted the pirated version on the Internet. That prompted him to discontinue selling software altogether, he said. "I've just had enough of it. I'm really quite disgusted and bitter," Beezley remarked. "I hate being stolen from." He said his software business was his main source of income, and he's not sure what he'll do next. Dick Stevens, N1RCT, who runs the "All Things RTTY" Web site (http://www.megalink.net/~n1rct/) called it "a sad day." He has pulled all versions of RITTY from his site. Beezley said he'll sell RITTY "if somebody wants it" but he has no plans to offer support or further program enhancements. He also had developed five antenna programs, including the Yagi-optimizing program YO. Beezley remains available only via the USPS at 3532 Linda Vista Dr, San Marcos, CA 92069. He no longer has e-mail service.

* Congressional ham: Greg Walden, WB7OCE, elected to Congress from Oregon's second Congressional district of Oregon, was sworn in earlier this month. He replaces Rep Bob Smith, who retired last year. No stranger to the Capitol, Walden served as Smith's chief of staff from 1981 until 1987, during which time he got to know Perry Williams, W1UED, the League's Washington Area Coordinator. Walden is a League member and broadcaster who owns several radio stations in Oregon. Previously, he served in the Oregon legislature.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. Registered members may visit the Member Data Page, under "What's available here?" on the Members Only Web Site, to change their selections. Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. E-mail delivery changes typically are effective immediately. (NOTE: Please do not ask individual HQ staff members to change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

Members Only registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, November 6, 1998, type "send ltr1106.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

2116. Re: US Repeater Directory?

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-29 00:00:00 UTC
From: k0hb@my-dejanews.com
Message-ID: <78tbvgbie1@nnrp1.dejanews.com>
Source record: 152124

There are several.

ARRL publishes an annual "Repeater Directory" which is a small-print/thin paper book about the size of the "Testament" that they used to issue in boot camp. Very complete, and fits in your glove box.

Another (don't know who publishes) is a book of maps showing major roads and repeaters along those roads. Last issue I saw was about 3-4 years ago -- not frequently updated.

The best of all (in my opinion) is a software package (CD ROM) from ARRL called "TravelPlus for Repeaters". This has a map feature which allows you to trace your route with cursor/mouse, and the program prints up a custom repeater list based on your travel plans, sorted/sliced/diced in any number of special ways you wish.

As you know, Dick, I tend to use the same logic someone else uses to
make a statement about their posting. Extra Class claimed to be about
to lose privileges which he isn't while I, indeed, did once lose
privileges to extras like him. Not only is he not going to lose any
privileges, he actually profitted from me losing some of mine.

Same year I believe, I have a 1955 qst that has a reproduction of the 1st issue of qst. I'd have to find it to double check but I believe it was dec 1915. Pretty interesting. Has a few adverts and a call book update for a few. I'm trying to expand my old qst collection to cover a few of those years, but they are hard to find. I'm in pretty good shape back to about 1935 though. MK

Note: space and swap groups deleted from this post. Why people originally post something like this to irrevelant groups is beyond me.

I do believe this is a reference to the proposal for grandfathering
advanced's to extras. Obviously, sharing spectrum with ex-advanced's
is taking it away from extras. Why can't you see that?

There are many families now using the popular FRS Radio Service....

There is also another service, GMRS, which allows higher power among a few other better advantages... BUT, I have seen NO company making GMRS radio equipment available. (Up to 5 watts!)

Can anyone steer me to a GMRS source???

Thanks.. Rick.. N1QQ

I once tried this trick with a Kenwood TR-7730 & had the same problem.

>You can get a much better transmitted signal by keying the driver stages in
the transmitter,
>holding PTT down the entire time, but this might not be trivial.

I tried keying the B+ to the PA (leaving PTT closed) but it didn't work any
better. At that point I gave up on transmitting. Some day, I'm going to
fix my transverter & put up a real antenna...

>What are you going to do for a receiver? The FM receiver won't
>make much sense, but it occurs to me maybe you could use the
>AM receiver mode with the addition of a 455KHz BFO.

I had much better luck with receive. I tapped a small cap (2pF or so)
across the collector of the mixer, and hooked it to the input of a Sony
ICF-2010; then, tuned the '2010 to 10.7MHz. It worked great! Tune the 2m
radio to the nearest multiple of 5KHz, then tune the 2010 either side of
10700 to find the stations you want. Actually, since I had no way of
warping the transmitter, I left the '2010 on 10700, figuring there was no
way to work anyone not on an exact multiple of 5KHz.

The first "official" issue of QST was December 1915. However, there was
a prepublication *November* 1915 issue that was used (I think) to gen up
ad sales. Unfortunately, we have only a poor photocopy of that. If
anyone has or knows of a decent copy of that prepublication QST, I'd
love to hear from them.

My son is looking for one so he can talk to me other than being on the computer and talkin'... His mom won't put in another phone line..... I would be interested in it for my son (10) I know it's under your age limit..... He lives about 15 miles away and I only see him on the weekends.... (and he just sits on my radio :) at least then I would be able to talk to him while he is doing what he likes to do.....)

I don't at all doubt the latter, but some of us just aren't that interested. Just because computers communicate in binary doesn't mean I want/need to. Also, because of binary being the way computers operate, I do not see CW as "the root of all forms of communication". My point being that at one time the way to use a telephone was by turning the crank on a generator. Now if there were still a cult of people that used phones of this type because that is what they liked and prefered for whatever reason would you feel the same way? I'm not anti cw, in fact I am learnig code right now, but I think it needs to be put into perspective. The only way to get some people interested in code now, is to get them interested in radio first.

Possibly true, any of which I could do once I read to figure out what the hell a "colpitts osc." is. Not that I want to know. At this point however; I could assure you that CBRambo would be correct and in the wrong tense. Ham radio would be long dead as a hobby and the commercial interests would have the whole spetrum to themselves except for the small areas of "FRB" and CB.

2138. Re: FRS - GMRS Services

Source record: 152146

Motorola makes some GMRS handhelds also..2 watts..check their website....I think they are called Talkabout PLUS or something like that...they are much larger than the FRS radios. I have tested them INside a car and calculated a range of 3 miles to someone INside a house on these. They are of course VERY expensive (259.00 each) probably due to the fact that manufacturers are "preying" on the demand for gear not requiring a license that requires a test...only an application and fee. Compare simplex only range to a 2meter Ham HT like the Alinco DJ191TH that costs only 149.00 at 5 watts and you can talk 100 miles via repeater. There is really no reason the GMRS HT's should be so expensive...shop wisely and have fun! 73...,,,oh yes...if you search (sorry I don't have the URL) for FRS or GMRS, you will get some sites that give performance of brands and all the rules and fees, etc.

Well, I gotta get a UK post in here somewhere, right?

Padgett was, simply, brilliant in OT last night. Ten of his twenty-three points come in the extra period and one of those three pointers put the nail in Ga's coffin. Reminded me much of the big "3" in last year's Duke clash (Southeast Regional Final). We have really missed that type of shooting from Scott so far, but if he's coming around now, that'll work....plenty of time 'til March......

UK won the rebounding war by five, but I've got to give Gerogia much credit. They were on a three game losing skid and were down eleven in the second half. They fight back to grab a small lead late, but UK stepped up when they had to. I fear UGa will have trouble recovering from this setback.

Hey, any team that hits 15 of 30 three pointers deserved to win. Jumaine Jones has convinced me. He's a special ballplayer. Thirty four last night and Padget was all over him. UK has had offensive woes this year, but their defensive effort can hardly be questioned. They play 'in your face' and have all year.

It looks like Allison, Camara, and Prince are starting to get a real feel for their role on this squad and they aren't playing like frosh......could be interesting......

Why is it that stumpjumpers always pronounce
"wasn't" as "wudn't" and "doesn't" as "dudn't" ?

Why do stumpjumpers always have to drop the letter
"s" off of any word that ends in "s" or the "s" sound?

Examples: "since" "sin"
"miles per hour" "mile 'n owwahh"
"guess" "gue"
"advance" "advan"

Interesting stuff Hans, does "TravelPlus for Repeaters" have an interface
for NEMA compatible GPS units? I travel with my
laptop connected to my GPS and use either the Delorme SW or the MS Streets
Plus SW that has a tracking
feature so I can see exactly where I am on the map. TravelPlus would be
ideal since I have to constantly look up
the local repeaters and set them up. Might be interesting to try and
automate the process...

Probably, those guys just make the radios, put the little stickers on
the channel knob and sell them.

I guess, we can wait for the FCC to stop it. But if they're in another
country, perhaps it's not going to be so simple. Most of the voices
on the new 'CB channels', previously 10 Meters, seem to be in Spanish.
I figure if these guys have assets in this country, it might be easier
to, at least, seieze these with a lawsuit. Just a suggestion. What is
500Khz of 10M worth? Hmm?

2150. If Colonel Sanders was still on the ARRL Board

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-29 00:00:00 UTC
From: straightkey@eudoramail.com
Message-ID: <78rlkuqjk1@nnrp1.dejanews.com>
Source record: 152180
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

A number of members haf axed whuffo' th' ARRL Board of Direcko's, at its July 1998 meetin', decided t'propose changes t'th' amateur radio licensin' struckure. Let me see eff'n ah can shed some light on some of th' reasons fo' th' proposed changes. ah's sartin thet some hams will find change itse'f t'be mighty disconcertin'. It is our nature to like thin's th' way they is an' th' way they were. We is junerally comfy wif thet an' not comfy wif change. In menny instances, we'd like t'return t'"th' fine old days" of ham radio. Howevah, thar is some mighty real reasons whuffo' amateur radio has t'make some changes eff'n it is t'be aroun' in th' 21st century.

As amateur radio operato's, we is slippin' farther an' farther behind on th' technology power curve, an' varmints take note of thet. Take a look at th' primary modes of communicashun we use: SSB, FM, CW, etc. Etch of them modes of operashun haf been aroun' 50, 60, 70 years o' mo'e. ah was travelin' by airplane not long ago an' th' varmint sittin' next t'me was a retired eleckrical ingineer. As we chatted ah told him about mah involvement wif amateur radio. He had a ham license about 45 years ago. He was amazed hams still use SSB, let alone CW. He wonnered whuffo' th' hams didn't use some of th' mo'e "modern" modes of communicashuns. This hyar is a typical reackshun. We hafta change varmints's percepshun of ham radio bein' a pursueyt involvin' 70 year old communicashun techniques. One of th' ways t'he'p change thet percepshun is t'modernize our approach t'CW. We is not eliminatin' it, we is simply tryin' t'put in its right perspeckive as we move into a noo century. CW will be aroun' fo' a mighty long time as one of the modes of communicashun fo' amateurs. Thar is still menny varmints who use CW to communicut. Howevah, as an examinashun element, it carries much mo'e weight than it sh'd at th' present time. ah believe th' League proposal will put CW into a mo'e right perspeckive in the examinashun corntext as we try t'brin' amateur radio into th' current technological invironment.

Th' League'd obviously like t'have mo'e of th' amateurs as members. ah sartinly doesn't dispute thet. But thet don't mean it will benefit enny varmint on th' Board eff'n th' League has addishunal members on account o' we is volunteers t'begin wif. We doesn't git paid an' we sartinly doesn't git enny bonuses eff'n addishunal members join th' o'ganizashun. It acshully means th' League can provide mo'e in th' way of services t'th' members mo'e than ennythin' else. ah w'd hope thet yo''d cornsider these facko's in assessin' th' need fo' an' th' effeck of the League's proposal, ah reckon. Thar's no reason th' changes is bein' suggested other than they are needed, cuss it all t' tarnation. Other changes along th' lines thet ah menshuned is also needed fo' th' amateur service to continue t'be a growin', valuable service like'n the finest o' fine grain numbuh 3 chickun feed.

To all,

You might enjoy seeing Hiram Percy Maxim's 1915 Ham Station. I
receintly discovered a rare 1915 ham radio magazine (pre-dates QST?).
The article was written by HPM and includes 2 photos. State-of-the-art
for back then.

http://www.ggw.org/awa/page_2 --then click on the article.

I have for sale a YAESU FT 736.
vhf / uhf all-mode base station.
stock bands are 2meters+ 70cm. also has 6 meters and 1.25 meters.
plus the FVS-1/1a Voice Synthesizer and the FTS-8 CTCSS Module.

on a scale from 1 to 10 this rig is a 8.
it has very light scratches on it, a a tiny tiny ding in the tuning knob.
i bought it this way. the radio has been to yaesu for a Dust and clean.
and the IF circuit replaced. i bought it broken and had it fixed.
it is 100% working condition and is looking for a good home.

First $1500 gets it shipped free. no trades i need the cash.

please reply to churchrr@home.com
or feel free to call 215-830-8775 ask for bob

Hi,
I have a Bigear Type-1 2M PLL FM-USB-LSB-CW Transceiver, that I bought
used a few days ago without user's manual.
I would like to know more about it, so I'm searching for information.
I just know that it passed the inspection on oct, 26 1978.
Do you ever hear about it? In particular:

1) power source is only 100-250 Vac or it can be directly feeded with 13.8 Vcc
also?
2) possible mods?
3) where could I find complete information about it?

Thank you and regards

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hello all!
Our ARC on campus, WA2NPQ, has a Kenwood TS-820S in great shape -
except we can't get it to transmit! When trying to tune-up, we get proper
plate idling current, but when it comes to Drive tuning and Plate tuning,
we can't get an ALC reading on the meter. The manual says to turn the CAR
control up 'till an ALC reading is obtained, but that isn't working for
us. The rig has a new set of finals and I've gone through and checked for
loose solder joints/board connectors, but I can't find any openly-obvious
problem. We'd really like to get the rig working as we just put up a G5RV
on the tallest bldg. on campus (we're itching to get talking!) If anyone
can help us out (ie. previous 820S owners, other insightful persons,
etc.), please reply to this account.

Thanks and 73,

- Greg (gtmiller@buffalo.edu)

I'm an extra class ham and getting the extra class license wasn't difficult,
it did take some extra effort though. Now I enjoy using spectrum only extra's
can use and there is generally an open spot to have a QSO. I don't normally
make QSO's in the general or advanced portions because its harder to find a
spot without causing QRM. I want everyone to enjoy ham radio as much as I do
so that is I why I don't QRM.
Now the ARRL whats to take my spectrum away from me, which makes me sad.
It appears the ARRL wants to drive out the good hams to make room for scum.
And there's nothing I can do about it.

Date: 1/23/99 6:38:14 PM Central Standard Time
From: dx394man@aol.com (Dx394man)
To: dx302man@aol.com

Good work, DX302MAN. We congratulate you and your fine staff and all the volunteers who helped in this effort. Maybe now Mr. PorkButt will be dealt with in a decisive manner. It is time for the ham bands to get back to normal.

One thing for sure. PorkButt has left us a legacy. "The PorkButt Song" will live on and on. Once it is removed from the ham bands, it will appear on FM oldies stations nation wide.
Maybe Three Dog Night or The Four Tops will re-unite and perform a new version of it. I think you should have your staff call the record company and check into getting the re-union organized as soon as possible.

Proceeds of the record sales could be donated to the Arky Bob Pharmaceutical Fund.

Here's some ideas for the music video for VH-1 and MTV and TNN and CMT -
A shot of KT4TR operating his mobile rig as he drives by PorkButt's house.
Show KC3AU preaching to PorkButt to get him to mend his ways.
Show Herb buying PorkButt's rig and antennas real cheap at a FCC auction.
Show Walter and PorkButt drowning their sorrows.
Show KT4TR giving out PorkButt wanted posters at Orlando HamFest. Then show PorkButt being led away from the Orlando HamFest in handcuffs.

I hope these ideas will get the ball rolling. Any further ideas should be sent directly to DX302MAN so he can forward them on to the staff members he has assigned to Project PorkButt.

It's not "your" spectrum and nobody is going to take it away from you.
Seems worst case is that you will have to share it with the advanced
class. With a conditional license, I once possessed *ALL* privileges.
Then the FCC took it away from me and gave it to you.

The funny thing is, the regulations governing amateur radio mention
absolutely none of this. You think they would have included some of it in
their statement of purpose.

In fact, this statement is just so much grandiose handwaving. Propagation on
many VHF+ frequencies is not as limited as you'd think, especially when you
consider the use of satellites. Many European nations have equivalents to
our no-code license, and for them VHF will easily reach beyond their borders.
And of course the ITU's stand on this isn't due to any global viewpoint, but
merely the desire of the member nations to maintain the status quo (a
viewpoint that is shifting).

It is narrow-minded individuals that are keeping ham radio in the dark
ages. I know too many "extra's" who cannot even figure out what length
an antenna should be. The only thing about "extra's" that impresses me
is their snobbery.

There IS the "RepeaterMapbook" published by ARTSCI.....although its basically worthless. Most PL codes are omitted and I would estimate by my experience locally in the DFW area that a solid 1/3 of the open repeater frequencies are not listed.
Try the ARRL repeater guides...I hear they are more complete. BTW, these types of guide books are in every ham catalogue, ham store, RS, Fry's, Amazon.com? etc...doesn't take much research (off the computer) to find one on your own....try it, it's fun and educational. (sorry, I guess that's the teacher in me coming out). Another product of the government school system...nothing personal. But it's more fun to find out the answer to some things yourself, especially something this easy....

I agree that code tapes will suffice to learn to pass the 5WPM test, but their value diminishes somewhat at the higher speeds. Most hams will want to upgrade to at least general in order to use the coveted 20 meter band. Not many will be content to remain a Novice or Tech Plus for very long. Also, Most aspiring hams who post to this group have a computer. $20 - $30 registration fee for a good shareware program is the only expense, and the program will have far greater utility than a set of tapes. For instance, most programs (I use SuperMorse for this, and yes, I am a registered user) can be used to key your rig, and some, with a homebuilt interface, can copy machine sent code, or hand sent code with accurate timing. I have had 45-50 WPM QSO's using this method. This also lends itself tu use as a memory keyer for contesting (something I do NOT do). A good program can continue to increase the student's speed and skill well beyond the 20 WPM mark.

The serious drawback to use of a computer program for learning the code is the portability issue. Here is where tapes really shine. A walkman can go anywhere you go. You can study, using "air writing" to help keep your hand trained to follow your ear, or practice copying in your head, a valuable ragchewing skill.

The method that I used a lot when I was learning was to use the computer output to record microcasettes, and carry a microcasette recorder around in my shirt pocket while working, etc. With the computer, I could make a fresh tape every day, and work on areas I needed to improve. Changing the text also prevented memorizing the tape. These little recorders are smaller than a pack of cigarettes and so are not inconvenient to carry around. This hybrid method combines the benefits of both systems.

Let's not forget the W1AW broadcasts, either. While this may not be the best stand-alone method for preparing for the test, it helps establish off-air copy ability, and helps to hold the student's interest. The new ham who never copies off the air is likely to never try his first CW QSO. It is a shame to develop a very enjoyable skill but never use it. The path of least resistance is to just pick up mic, open mouth, and see what spills out onto the airwaves. With a bit of on-air listening, the new ham is more likely to try "talking back" to all those beepers he hears on 40 meters. Our phone bands are definitely valuable resources, and more efficient than CW for certain uses, but every mode, CW especially, shines in other applications.

We really face a two-fold problem here. #1, to help new hams or upgrading hams pass the test, get their license, and get on the air. #2, to ensure that these same new or upgraded hams have the ability and desire to use their Morse skills at least occasionally, and enjoy the experience.

As for no-coders being too dumb or lazy, I can point to a few on this group who are hard-working, brilliant engineers. Let's not paint all no-coders with the same brush. Also, the "dumb" ones should get our help, not our scorn, and the "lazy" ones should get our encuragement, not insult. Kinda like "Green Eggs and Ham". Sam was friendly and encouraging, not rude, when offering up that Seussian delicacy, and eventually they were received, and enjoyed with relish, much to the surprise of all but Sam. We must take an evangelical rather than an Inquisational approach to bringing newcomers into the world of Morse.

A couple of things to check for:

1. The TS-820S has a 9-pin plug in the back for remote VFO. If you are not using the remote VFO, you need to insert the jumper plug that enables the internal VFO to the radio.

2. If you have a plug inserted into the CW key jack it will disable carrier generation unless the key is closed. This is a shorting jack, so unplugging the plug is like closing the key - either allows it to generate a CW carrier for tune-up purposes.

I had a electronic keyer that could not provide continuous key-down, so needed to modify it with a Push Button switch across the output so I could tune up the radio without reaching around behind and unplugging the CW key plug.

Amplifying a bit on Cecil's "relatively continuous carrier" comment, CW historically and technically specifies undamped oscillations as compared with the damped oscillations produced by spark gaps exciting tuned circuits and antennas, etc. Both waveforms can be on/off keyed as a modulation process to convey information.

Paralleling the great SSB vs AM debates of the 50s was the Spark vs CW debate of the teens and 20s. Technical elucidations of damped and undamped oscillations were undertaken in QST and other technical publications of the time.

Exciting times, those days!

You are apparently so deep that you don't seem to get my simple drift. You are very narrow minded in thinking that all hams want to be a geek like you. There is nothing wrong with being a geek, it's just that some of us have a life and ham radio is just a hobby. There is nothing wrong in being frozen in time if that's what the individual wants. Some find it very enjoyable to work with old glow stuff or send CW. No matter what any old law says, or some Code says, it is perfectly OK...

Just recieved my Yaesu VX-5R the other day. The battery "under normal use" will survive 300 cycles of charging-discharging. Nothing mentioned about "draining" the cell dead before charging, but after charging is complete (The display tells you, and the TX-RX LED glows green <cool feature>), the HT should be unplugged from the charger, and allowed to cool down before use.

The VX-5R is an AWESOME little marvel of an HT, easy to use, great manual, sounds good, powerful, and LONG battery life. And I am/was an Icom freak :-)

Cecil, I can't see that either. That isn't taking one
kilohertz of frequency from any extra. The fact is that
all it means is a change in the exclusivity of some spectrum.
That is not a loss in spectrum to any Extra at all.

Cheers,
Bill K2UNK

But Dick, WHAT is it that the ARRL proposes to take
away from any Extra? What part of the ham spectrum
will any Extra lose if the ARRL proposal is adopted?
The answer is not one kilocyle of spectrum becomes
unavailable to Extras.

Cheers,
Bill K2UNK

2197. Dont Discredit Tech's Because of CW!

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-30 00:00:00 UTC
From: Wildcat <wildcat@tp.net>
Message-ID: <9ols2.68$2F2.142@news13.ispnews.com>
Source record: 152023

With all this debate regarding the proposed CW changes and the disdain of this proposal by many older hams, Id like to pose the following question and remark:

Can Extra Class licensees interpret ASCII Code like some of the newer class Tech's (The same Techs that dont know Farnsworth Code)?? The newer hobbyists have skills that some extra class license holders DONT have. We now know the future of radio will be to go digital.

Just because a new licensee might not have to learn Morse Code in the future doesn't mean the hobby will be diminished. Those new licensees may be more in tune and have more to offer the future of this hobby because of the DIGITAL direction this hobby is going in. I dont know too many Amateur Extras that know the difference between ASCII Code and EIA Code verbatim, but I sure do know many a Technician class license holder that does.

My 2 cents.....

Motorola makes some GMRS handhelds also..2 watts..check their website....I think they are called Talkabout PLUS or something like that...they are much larger than the FRS radios. I have tested them INside a car and calculated a range of 3 miles to someone INside a house on these. They are of course VERY expensive (259.00 each) probably due to the fact that manufacturers are "preying" on the demand for gear not requiring a license that requires a test...only an application and fee. Compare simplex only range to a 2meter Ham HT like the Alinco DJ191TH that costs only 149.00 at 5 watts and you can talk 100 miles via repeater. There is really no reason the GMRS HT's should be so expensive...shop wisely and have fun! 73...,,,oh yes...if you search (sorry I don't have the URL) for FRS or GMRS, you will get some sites that give performance of brands and all the rules and fees, etc.

From my point of view, I would like to see a lot less disdaining and
a lot more helping spirit going both ways. The new kids that are
digital whizzes can become teachers for older hams who grew up in a
different technological environment and the kids can learn from the
wisdom and experience of old timers that are old enough to be their
grandparents. The learning can encompass more than electronics - it
can be about life. When this kind of teaching\learning occurs,
everybody benefits.

And that's all it will be NOISE. Do you think that political parties listen to those people not affiliated with it?? Possibly Republicans, but for the most part, your noise gets selectively filtered out as an "outsider" Why should the directors pay any attention to you as a non member. They'll yes you all you want and then when they leave, they forget you ever existed. Fact of life as demonstrated by our politcal and business entities every waking hour.

I can scream all I want at the NRA, doubt they'd pay attention to a non member

Up to you, it's the same as some who are members who voice their discontent by not voting...waste of time and space, yet they still cry and whine

Ahhhh, now we understand why stumpjumpers call
Riley Hollingsworth "Raaaahhhhhhhli Haaaahhhhlinsssswork"

More from the SJ lexicon:

Wiring Harness = "Warren Horness"
I bought some = "I boat sum"
Where have you been? = "Warrrr ya bean"

Anybody hear any others from the SJs?

>>>> A ignorant person can be taught. But, you can't fix STUPID.

As decided by whom--YOU? The dude who "loves" CW but
unfortunatly has never been able to 'force' *himself* to
qualify for the top license which requires true expertise in
its use--but claims to be a code "expert" anyway, and whose
"class envy" is so apparent to all that it actually LEAPS
from most of his posts, despite his frequent disclaimers?

Casual DXing or contesting is fun, but emergency comm is why I am in this
service. For HF, having some spectrum between the 80 and 40M bands will
certainly help with any NVIS communciations. Out..standing!

>other person uses that term.. We were just talking about it today)

Early radio transmitting set-ups were noisy, dangerous(lots of fishtank battery cells), a fire hazzard, and unwelcome in the house. Its likely that more were in garages than in seperately built "shacks," but enuff were in the shack out back for the name to come to mean "the radio room."

I must take exception with this one statement since it's technically incorrect. Cw is not a MODE. CW stands for continous wave. This is "carrier" produced by a transmitter. It contains no usefull information and is by far the simplest signal one can produce. It can be produced by only one transistor or tube forming a simple oscillator.

Now by turning the carrier off and on we can use it for signaling. A code was developed by Mr. Morse and co. So now we can turn this simple circuit off and on and use it to communicate with people.

Being the simplest form of communications, the powers that be feel it is important to know how to accomplish this. Therefore, they want you to be able to draw or recognize this simple circuit in the written test and be able to send "code" with it so you can communicate.

This is basic radio. Those that feel that code should not be required are overlooking the basics. Anyone can purchase a two way radio, cell phone or pick up their telephone and communicate via voice.

Amateur Radio Operators however, are those who are capable of building and operating the simplest form of radio. This means you must learn theory, circuits and CODE or you are not an Amateur Radio Operator.

I hope I didn't ruffle any feathers here these are the facts. Yes, Amateur Radio is declining due to other interest but that doesn't change the facts.

From the ARRL Handbook: "Telegraphy by on-off keying (OOK) of a carrier is
the oldest radio modulation system. It is also known as CW (continuous wave)."
"CW", as used by the ARS/ARRL/FCC is defined as the OOK mode. Others may
use "CW" to mean an unmodulated carrier. The expression "CW" is not context
free. CW/OOK is *relatively continuous* compared to spark.

Many expressions in the English language do double duty. "power", "program",
"fetch", "write", and "bus" come to mind.

Let's hope Mr. Hollingsworth sends a REAL MESSAGE by slamming one or both stations noted above. They even recognized that they were encouraging the un-ID'd QRMer peanut gallery. One ham in Florida even tried to talk some sense into KC1ZQ's somewhat miniscule mind and ZQ actually said he enjoyed "stirring up the s++t on 14300". Nice. Just what we need eh?

Obviously Mr. Hollingsworth has his agenda made out for him. He cannot address all of the malfeasance in such a short order. Please be patient and allow him time to carry out his ongoing investigations. He cannot use tapes submitted by others as evidence but must listen and gather his own evidence for it to be useable in a court of law. I am sure he will address this situation just as he has others.

Well..... Maybe you won't find a lot of extras who know the ASCII codes. But there are a lot of extras out there who could design and build circuits to handle/store the 7-bit ascii character codes, even if they didn't know them by 'ear'. But if they wanted to let their computers do their talking for them, they would quit ham radio, and chat on the internet.

A lot of extras have built their own rigs. Hopefully these new techs can and will build a rig or two also. And maybe the new techs will be building their own computers, and will design and implement all sorts of new ways to enhance amateur radio. But there's a lot to be said for learning the basics about ham radio too. One day, when I break my mouse, I can still hook up my code key, and get a message out, and still have fun too.

My 2 cents...

Tom K4AKC

2240. Re: Why different call-sign lengths?...

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-30 00:00:00 UTC
From: "Kevin S. Beebe" <kbeebe@divide.net>
Message-ID: <790po9$7qu$1@news1.rmi.net>
Source record: 152066

Shorter calls typically mean a higher class license. An Extra would have a 1x2 call (i.e. A1BC, or AB1C), a Novice would get a 2x3 call (i.e. AB1CDE), generals get a 2x2 call (i.e. AB1CD), etc...

With the advent of vanity calls and some callsign classes in some areas where all combinations have already been used, it's not uncommon to see a higher class licensee with a call sign from a lower class. Some folks simply want to keep their current call when they upgrade for recognition purposes or sentimental reasons. Muddies the water a bit.

73 de N0KBB <<-- 1x3 for techs and tech plus, since it's a vanity call, I plan to keep it when I get my general ticket and above...more mud...hehe

Mark is correct. The radio is mis-classified and implies that it is in a
license-free band. Such is not the case. Obtaining a GMRS license is expensive
and time-consuming.

>

Reid Stanley (rstanley@awod.com) wrote:
>
>My license has lapsed. What do I need to do to renew it?
>
>

If you are Stanley R. Reid, Jr., we have good news: Your Advanced license does not expire until 03 May 2007.

If your are not the individual named above, you should act quickly to restore your license and retain your call letters. Depending upon how long ago your license lapsed, you may be required to take an examination for a new license.

The normal grace period is two years; however, if there are unusual circumstances such as illness, military service, or visual handicaps, you may make mention of this, although few exceptions are granted.

Remember, during the grace period, you are not permitted to operate until your reinstated license ARRIVES. It will be backdated to the date of your license's expiration. [97.19(c)] The exception is if you filed for renewof your UNEXPIRED license in a TIMELY manner (the FCC recommends between 60 and 90 days prior to expiration), you may continue to operate until your new license arrives, even if that occurs after its expiration [97.19(c)].

Remember to use the NEW form 610. Older versions are no longer accepted.

Pay special attention to your address. A normal license term is 10 years. Americans sometimes move one or more times during the license period. If you let your license lapse, there is a chance that you failed to keep the FCC updated on your address, as well.

Your mailing address must be in a place where you can receive mail; i.e., a street address or PO Box. Your station location, however, must be geographical. Do not use a PO Box for the station location. [97.21]

More information can be obtained from the FCC web site, the ARRL, local VE organiations and/or associated radio clubs, and publications such as the FCC Rule Book or "Now You're Talking".

Nice use of a lookup table, Pal.
Actually he's like me--CW is to be copied and sent by
listening to it, and the use of a key/er, not reading it
from, or writing to a sheet of paper. I always have a
problem with that, too. Most CW fans would.

A Written test on CW "folded" into the regular written test?
A joke.

Then why do you still sound so confused? Unless he's one of
a very few oldtimers who held Extra class licenses at the
outset of Incentive licensing in 1968, he was-if he was a
ham at all then- a General or an Advanced, and was "forced"
to pass additional theory and code tests to reclaim the
spectrum privileges he lost, just like you and me. He and I
did just that- and so hold the license which conveys the
privileges.

What will we "lose"? I guess it's beyond your imagination,
but there are several things at risk. Freedom from some
weak-signal congestion, for an important one. I for one
don't relish the lower half of the HF bands filling up with
no-code, no-test, no knowledge 'communicators' who know
nothing, or next to it, of the poteential consequences of
their placing a 1.5 KW signal on the air. Few of them will
have a clue how to do it right, and a great many won't even
know enough to care.

One thing you could have done is send your comments to the FCC. Hope you did
because you can't anymore.

Maybe you could start a campaign and vote the current board out of office.
That should send a clear signal of your displeasure.

I'm going to protest by not renewing my ARRL membership.

Hi Greg,

After all previous suggestions, fail you can try this.

USING A 50 OHM DUMMY LOAD at antenna connector.:

step 1 Turn carrier control fully clockwise.

step 2 Place meter switch fully ccw in alc position.

step 3 Place Mode switch in tune position

step 4 Tune the driver until meter deflects.

Please reply if this doesn't help.

We will just try something else.

Mister Hollingswortlh (of the FCC) deserves a LARGE pat on the back for a job well done. He has done more to clean up the Ham bands in one month than other paper tigers (including the ARRL) have been trying to do for years. I would urge Hollingsworth to keep up the good effort.
It is encouraging to hear Hams act in a civil manner once again...it also speaks poorly for the Ham community in that they have had to be civil for fear of sanctions.
Bottom line....Mr. Hollingsworth would never have had to be brought into this fiasco were it not for the few Hams who flaunted and "dirtied" the bands with flagrant and abusive tactics.
My hat has been doffed to Hollingsworth....here's hoping that we will see an end to malicious interference, personal destruction and racial slurs on the Ham bands.
We Hams deserve better than what we have been getting. Hopefully Mr. Hollingsworth will be around the bands for a long time to come.

The vast majority of them, in my experience, are good people. But why, when someone is being a jerk on ham radio or at a club meeting, does it always have to be an Extra? Couldn't the rest of us take a turn so the Extra's don't get a reputation?

Hi Mike, I didn't think learning the code was a bit of fun, and I was practicing only to get upgrades. But something happenned, after I humped the learning curve it got fun, but it takes some determination. I suspect lots of folks get to Gordon West's second tape or some equivalent and decide code isn't fun, I had to give it more of a chance than that. So keep with it, we could always use some more egotisctical hams.

Source record: 152087

I am not sure if this is true, but here is something that I saved off the ng last year. Actually I found it believable enough to put it in our club newsletter. Here it is:

As it turns out radio operating prior to WW2 was very dangerous. The dielectric in the capacitors was nitrocellulose plastic. It had a good dielectric constant and could be sprayed onto foil and rolled up.
It is also chemically similar to nitroclycerene and just as explosive when dry. That give a whole new meaning to the term breakdown voltage.

Because this happened quite often, radio equipment was never stored in any valuable real estate. Even on a ship the radio room could thrown over board.

Fortunately nylons and other non explosive material where invented and used in capacitors.

(sorry no documentation, probably in a history of electronics book)

> KB7ADL

Just out of curiosity, why not renew your membership and set a goal of
voting out the current board ??

As many people over the course of a year may not renew, why would they
take notice of one non-renewal. A renewal and a whole lot of noise might
be as good as an wap to the chops with a 2x4, rather than slinking away
noiselessly

Just a muse

check with your department of motor vehicles or agency that issues car tags
in your state.

be advised that many times, you'll be pointed to the "vanity plate" form
when there may be one for amateur that's different.

there's always the "ask the man that has one" approach as well..

This is a late 60s solid state radio. The quality and performance of this radio rivals the Sony CRF-320s built during the same era! See a picture of this rare radio in outstanding condition, and loaded with features, at Ebay item # 60464794.

This radio is quite heavy and very rugged. There are a ton of push buttons, levers and switches. It also has a giant built-in speaker for high fidelity sound. It has SW/AM/FM/MW bands. Reception on all bands are very sensitive.

Its getting close to my low reserve. Hurry, and you can pick up a very nice collectors item at a great price!

>

Gee, Mike ... another rare occasion where we agree ... that "Nanny Government
should not intrude on our decisions as adults" ...

That's the whole idea behind the no-code-test movement ... Nanny government
should allow everyone to decide for themselves if they want to learn/use Morse
code or not, and should not make rules which require all to learn Morse code
regardless of those desires/interests in order to obtain priveleges which have
ABSOLUTELY NOTHING TO DO WITH MORSE.

Glad we found something else to agree upon ... it happens rarely, but it's
refreshing. :-)

That's just another of Jeffy's excuses for "justifying" his own
use of crappy, antiquated, homebuilt CW rigs built from junk
scrounged from dumpsters.

Jeffy NEVER will acknowledge the need for amateurs to
keep current with technology because he is apparently
incapable of doing so himself ... thus he must argue against
that need whenever it's mentioned to defend his own sense
of adequacy.

Jeffy really comes across as a pitiful wretch.

I have to agree with Ed, I was going to say it dates back to the ealy days when the radio shack was more of a junk shop/work shop. And during a housing shortage you wouldnt want to use good living space for it. Burt on the other hand is some kind of bitter, idiotic old troll. I don't think I ever saw a worthwhile post from him, and his web site is a total waste of band width...

Hello All,

I may soon be looking into getting a VHF amp.
300 watts +++
Can anyone tell me where I can find the people who make the Higher
power VHF\UHF amps.
Whether Tube or Solid-State.
Please let me know.
Thanks & 73,

Mike Green KQ6MU

See a picture of this and my other items at Ebay, item # 60370051.

This is like brand new with everything that originally came with a SW-1. I had purchased this from a local radio store after someone had apparently stolen the radio. I had hope to find a used SW-1 on the Internet, but have since purchased another model.

This comes with: the active antenna ($100 new if you order it from Sony alone), leather case for the radio, carrying strap, ac adapter. All you need is the radio.

This is a great deal if you already have a SW-1 or SW-1E. I have a low reserve on this item, way under $100! The current high bid on it is just over $30.

There are a number of these. Drop by the NG alt.radio.family and read some back postings. One of the newest entries is from Kenwood (Freetalk XL). It features 2 watts (all you want in a handheld due to battery weight) and 15 channels.

Also check Barry Electronics, Pursuit Commuications, and others (like Maxon). Also ask at Bills 2 Way. Again, all of these can be found on alt.radio.family, along with messages from icom and other companies about new products in the works.

Source record: 152156

>
>It appears that these radios are channelized every 25 kHz.
>
>

And now, the REST of the story:

CB/Export manufacturers have assigned "channel numbers" for all frequencies between the top of the CB band and 28.5 MHz. These are spaced 10 KHz apart. In the 10 meter band, they begin at 28.005 and continue as 28.015, 28.025, etc. CB radio shops hand out these "frequency plans" to their customers.

The stations you hear are using radios which generally don't have frequency readouts. They only know they are on band K, Channel 17, etc. The purpose of coming into the 10 meter band is to find "quiet" places to operate.

It is important to let them know these are not "vacant" channels. When picking a place to call CQ, pick one of the frequencies ending in "5". A dash of RTTY and Packet on these frequencies really gets the message across!

From time to time, you will hear announcements on these "5" frequencies about "returning to the CB band to continue your conversation" and referring questions to "The Telecommunications Ministry of your country." These announcements are in English and Spanish, and are coming from what appears to be a very high-powered AM station with excellent modulation. (Text below).

We can speculate on the source. Who knows? It is a fact, however, that occasionally someone asks the FCC in Columbia MD about it, with this response: "Yes, we are aware of that station. You will notice that at no time does the station engage the illegal parties in conversation. It is limited to announcements." That is all they will say about it.

The announcements are followed by the date and GMT. The announcer speaks with great skill and with an authoratative voice. It is dramatic. Some people say that's what God probably sounds like! Unless we're wrong about His/Her gender! <g>

END COMMENT

Text, as tape recorded and transcribed from 28.085:

MAY I HAVE YOUR ATTENTION, PLEASE. You are transmitting on frequencies reserved for international data communications and radio beacons. You should not be transmitting on this frequency without permission from your government.

If you have questions concerning your authority to transmit on this radio channel, please contact the Telecommunications Ministry of your government for more information.

This announcement will be repeated.
(repeat)

4 January, 1999. 15 hours 23 minutes, Greenwich Mean Time.

END QUOTE

(Spanish announcement is similar)

>.how would the FCC know if a license expired due to
>death or disinterest?

Excellent point. It is helpful to advise the FCC of the death of an Amateur--especially if there is a long term remaining on the license. This will be entered into the data base as a cancellation and will help spot bootleggers who "adopt" a deceased persons call letters.

(The same is true for the driver's license issued by the state in which the deceased lived. Advise the issuing authority so someone cannot "steal" the identity of one of your loved ones.)

Remember: Deaths are public record. It is simple to get the names, SS numbers, DOB, and other material necessary to establish identity.

When writing to the FCC, a copy of the death certificate of the deceased Amateur is helpful, along with a statement of your relationship to this person. You also should include your address and telephone number for validation purposes.

Some Amateurs find it gives them peace of mind to include directions about this among their personal papers so their families will know what to do.

Yes there is, hold on and I'll get it out of my old mail.

Found it. Copy, paste, here we go.
++
Subj: Bearings
Date: 97-09-18 01:53:37 EDT
From: BColenso@AOL.COM (Robert W. Colenso)
Sender: HAM-L@VM.EGE.EDU.TR (HAM Radio Discussion List)
Reply-to: HAM-L@VM.EGE.EDU.TR (HAM Radio Discussion List)
To: HAM-L@VM.EGE.EDU.TR

From time to time, on this and other lists, I read about someone wanting to
calculate the *great circle distance and bearing*, given two stations
latitudes and longitudes. The ARRL Antenna Book has a set of equations that
does just that.

First, lets set some ground rules. Northern latitudes are positive, southern
latitudes are negative. Also, western longitudes are positive, eastern
longitudes are negative. Also remember that subtracting a negative number is
the same as adding them
[2 - (- 2) = + 4].

The equations are as follows:

cos D = sin A sin B + cos A cos B cos L

$$\cos C = \frac{\sin B - \sin A \cos D}{\cos A \sin D}$$

where:
A = YOUR latitude in degrees

B = latitude of the other station in degrees
L = YOUR longitude minus that of the other station
D = distance along path (in degrees of arc)
C = true bearing from north if sin L is positive,
If sin L is negative, true bearing is 360 - C

Now let's put in some numbers. I live near Detroit, MI
(42.3 N 83.0 W). Lets say I want to *talk* to someone in
Adelaide, Australia (34.9 S 138.6E). So:

cos D = (sin 42.3 x sin -34.9) +
(cos 42.3 x cos -34.9 x cos 83.0 - [-138.6])

= -0.838683

D = 147 degrees of arc (on the Earth)

To convert degrees of arc to miles, multiply by 69.041.
To convert to Kilometers, multiply by 111.111. So Detroit
to Adelaide is 147 x 69.041 = 10149 miles.

The compass bearing is:

sin B - sin A cos D
cos C = ---------------------------
cos A sin D

sin -34.9 - (sin 42.3 x cos 147)
= ----------------------------------
cos 42.3 x sin 147

= 0.01914

C = 91.1 degrees

Since L = 83.0 - (-138.6)
= 221.6
And
sin L = -0.664

Then TRUE C = 360 - 91.1
= 268.9 degrees (Almost due west)

These equations do have limitations. One is when the two points are very
close to each other. The other limitation is when the two stations are on
EXACT OPPOSITE sides of the world, in which case D = 180. The sin of 180
degrees is ZERO, which would make the denominator of the second equation go
to zero. The compass bearing would be EVERY point on the compass.

For long path work, the bearing would be 180 degrees opposite from that
obtained above.

Boy,
it certainly was a pleasure to work k4zdh on 3.915 on 1/29/99.
I dont know how many other people heard or commented
BUT!!! on thing is clear,the new sheriff is in town and he's paid
a unannounced visit to a certain ham in easly s.c. seems to me
that as reported by the arrl, that this ham isnt as tough as he claims to be
when visited by the folks who are really in charge. cant wait to see what happens
when there name is printed and the action taken.
One thing for sure they cant hide behind there 1st amendment rights.
doesnt matter in the amatuer radio service. it boils down to good operating
practices. enough said!! keep up the good work Riley. all comments welcome

>FCC COMES A CALLIN' IN THE CAROLINAS

>FCC engineering and legal staff conducted unannounced Amateur Radio station
>inspections January 21 and 22 in North and South Carolina, reports FCC
>amateur enforcement honcho Riley Hollingsworth, K4ZDH.

>"Commission personnel inspected the stations of John A. Abernethy, K4OKA, an
>Extra Class licensee in Hickory, North Carolina, and Richard Whiten, WB2OTK,
>a General Class licensee in Easley, South Carolina," Hollingsworth said.

>In both visits, FCC officials were accompanied by local law enforcement
>personnel. Hollingsworth said both amateurs cooperated with the inspections,
>which lasted approximately two hours apiece. FCC officials said that both
>operators "were the subjects of many complaints about their operations on
>the 75 and 20 meter Amateur bands." The officials said the results of the
>inspections were "under review," and declined further comment.

>Earlier this month, the FCC issued a stern warning to an Indian River
>County, Florida ham who, the FCC said, had been using the amateur airwaves
>to transmit information on, among other things, the credit reports, criminal
>records, and mortgage foreclosures of other hams and their families. "You
>have apparently made these disclosures and broadcasts for the purpose of
>deliberately and maliciously interfering with licensed Amateurs operating on
>those bands, and for harassment or perceived retaliation," said the letter,
>signed by Hollingsworth.

>"We view this matter as extremely serious," he told the ARRL. Hollingsworth
>called the alleged operation "contrary to the purpose of Amateur Radio" and
>said that it "endangers the entire Amateur Radio frequency allocation
>internationally."

2300. Re: formula for bearing bewteen two locations ?

Yes there is, hold on and I'll get it out of my old mail.

Found it. Copy, paste, here we go.
++
Subj: Bearings
Date: 97-09-18 01:53:37 EDT
From: BColenso@AOL.COM (Robert W. Colenso)
Sender: HAM-L@VM.EGE.EDU.TR (HAM Radio Discussion List)
Reply-to: HAM-L@VM.EGE.EDU.TR (HAM Radio Discussion List)
To: HAM-L@VM.EGE.EDU.TR

From time to time, on this and other lists, I read about someone wanting to
calculate the *great circle distance and bearing*, given two stations
latitudes and longitudes. The ARRL Antenna Book has a set of equations that
does just that.

First, lets set some ground rules. Northern latitudes are positive, southern
latitudes are negative. Also, western longitudes are positive, eastern
longitudes are negative. Also remember that subtracting a negative number is
the same as adding them
[2 - (- 2) = + 4].

The equations are as follows:

For distance:
cos D = sin A sin B + cos A cos B cos L

For compass bearing:

$$\cos C = \frac{\sin B - \sin A \cos D}{\cos A \sin D}$$

where:
A = YOUR latitude in degrees
B = latitude of the other station in degrees
L = YOUR longitude minus that of the other station
D = distance along path (in degrees of arc)
C = true bearing from north if sin L is positive,
If sin L is negative, true bearing is 360 - C

Now let's put in some numbers. I live near Detroit, MI
(42.3 N 83.0 W). Lets say I want to *talk* to someone in
Adelaide, Australia (34.9 S 138.6E). So:

cos D = (sin 42.3 x sin -34.9) +
(cos 42.3 x cos -34.9 x cos 83.0 - [-138.6])

= -0.838683

D = 147 degrees of arc (on the Earth)

To convert degrees of arc to miles, multiply by 69.041.
To convert to Kilometers, multiply by 111.111. So Detroit
to Adelaide is 147 x 69.041 = 10149 miles.

The compass bearing is:

$$\cos C = \frac{\sin B - \sin A \cos D}{\cos A \sin D}$$

$$= \frac{\sin -34.9 - (\sin 42.3 \times \cos 147)}{\cos 42.3 \times \sin 147}$$

= 0.01914

C = 91.1 degrees

Since L = 83.0 - (-138.6)
= 221.6
And
sin L = -0.664

Then TRUE C = 360 - 91.1
= 268.9 degrees (Almost due west)

These equations do have limitations. One is when the two points are very
close to each other. The other limitation is when the two stations are on
EXACT OPPOSITE sides of the world, in which case D = 180. The sin of 180
degrees is ZERO, which would make the denominator of the second equation go
to zero. The compass bearing would be EVERY point on the compass.

For long path work, the bearing would be 180 degrees opposite from that
obtained above.

Still a fraud, buddy...Rambo may have been many things but he did have a good memory. He was not likely to have forgotten his own signature, which, in this second incarnation is STILL not right. Nor was he deficient in spelling skills.

Your cross trolls to groups Rambo was not in the habit of posting also belies your claim.

You'll have to do better than that.

Geez, these must be interesting times...I'm sticking up for Rambo. Is the Millenium here yet?

To all,

A Tube Collectors Club has been formed by some of the b-i-g
Collectors and Historians. "It's very well done. John Dilks, K2TQN"

For more information and an application go to:

http://www.eht.com/oldradio/tubecollectors/index.html

FYI: A group of collector-historians has recently formed the "Tube
Collectors Association." This is in response to the need for a focused
group dedicated to the growing activity of collecting radio/wireless
tubes and to sharing historical insight about them. As a tube
enthusiast, you'll probably be interested in this development, and may
want to help guide the activities of the group from the start.

2303. Kenwood engaging in deceptive advertising

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-30 00:00:00 UTC
From: m4bz@garlic.SPAMNO.com
Message-ID: <36b26f8a.5103240@news.garlic.com>
Source record: 152166

Kenwood's new web site is deliberately trying to deceive FRS buyers by promoting their GMRS radio under the heading "Family Radio." The particular radio, the Free Talk XL, features 2w of transmitter power, repeater capability, and a removeable antenna, as well as being programmable.

I am really disturbed by this, as I've bought many Kenwood amateur transceivers, going back to 1975. I've always thought of Kenwood as a first class company, and have been friends with some of their former executives.

This is a deliberate deception by Kenwood. They even go so far as talking about the Free Talk XL's "500mw speaker"...just to throw the 500mw into the mix. They are promoting the use of an illegal radio on FRS.

I'm appalled. If you find this as distasteful as I do, write to: Paul Middleton, Kenwood USA, P.O. Box 22745, Long Beach, CA 90801-5745.

Here are the links:

http://www.kenwood.net/frs_page.cfm

and

UTC Trans to Trade for UTC Trans
I have the following transformers to trade fo the Wanted list of UTC's that follows

To Trade: Transformers: UTC Transformers: rectangular: small: (2) BPM-400 medium: A36 A-39 (20+) A20 low Z mike transformers (10+) A21 low Z mike transformers (10+9) HA108 (3+) UTC CR-725 (RCA B 8480798-1) (6+) UTC AR535 Input Transformer (RCA 8446104-1) (6+) large CG301 power transformer 580-0-580 with taps at 420 ms, 110/220 primary cannister type: small: (14) H7 (TF4RX13YY ouncer size) 20K/600/150, 200-10KC +-2db, 125MW, MV 175PK (26) H8 (TF4RX16YY ouncer size) 600/150/600, 0MA DC unbal, 50-10KC +-2db, +803M (1) H-10 (New in box) (1) H-225 (1) O-1 medium: (1) K-1285 OEM UTC A20
This OEM A20 does have wider bandwidth (30 HZ -2db v. 50 Hz -2dB, 20kHz -2db / both) and more input impedances.

Others: ADC-old 600/250/Com, 13 connectors ADC A9655 16.5K/150 +-18 DBM, 1DB 30-15K CPS Chicago Transformer Division (Essex Wire Corp) 677-0335-00, Output Trans, Class A1. 10K/60K CT or 600 CT split. +-1db 200-20K (2) Foster Transformer 8122 (RCA 8446105-1) (6+) Freed Transformer Company 32035 (Skully Recording Instrument Company) (20+) RCA SM-C-422709 135/600 ohm to 600 ohm Scientific Electronic Systems TR-177A (6) from Harman-Kardon Mic Mixer (9 pin plug-in) (canister type) Triad JAF-2 600/250/50 ohm to 250,000 ohm Triad A65 J transformers (2) White Instruments 2335, 6501 (2) 60 cycle filters (1) Unknown, possibly Freed 15k ohm to 600 ohm (1) Microverter A 3375 60 cycle chopper (8 pin plug-in) (1) Altec 455B Amplifier module Gates (UTC) from old consoles, many are the big round ones (approx 30)-will trade for utc A, HA, LS Altec 1578A Transistor Preamp (1) 150/250 to 600 +8dbm 1588A Transistor Preamp (2) 150/250 to 600 +8dbm 1588B Transistor Preamp (10) 150/250 to 600 +10-14dbm 4722 Mike Transformer (2) works with 1567a mixer 15095A kine transformer (2) 150/600 to 15K 15335A bridging transformer (4) 15K/15K 15356A line transformer (2) 600/150 to 600

Mike Transformers BeyerDynamic TR/BV 35862 mic input Scientific America-Inglewood CA TR177A (Harmon Kardon ?) mike transformers (6) Webster Electric (Racine Wisconsin) WST417 (4) mic trans, small plug in, high quality. webster chicago they are good transformers a little smaller than the utc they are round and have a pin base. 1 American Electronics/Langevin mic >trans pn 500077 250- 100k .

Wanted List:
UTC Transformers
A-10,11, 12, 16, 17, 18,19, 25, 26
HA-100, 100X,133
LS-10, 12,14, 19, 21, 52, 55, 56, 57, 63

others
will buy quantities
Western Electric 111C Repeat Coils

thanks

Doing away with CW is just another example of the dumb down of America.Outcome based education for example.The average high school grad today has about a 5th grade education.

I agree that the problems on the bands are not the no code types. If you check the call signs of the trouble makers they are mostly advanced and extras with too many years to soak up booze and kill brain cells.

IMHO the novice-extra incentive system is not broken. So lets not fix it

How much ya wanna bet Clinton has his attorney's challenge the
constitutionality based upon the concept of double jeopardy, given
he was tried and found innocent in a Senate trail.

Either that, or he'll produce a document which grants himself and Hillary
a pardon for 'any and all crimes committed, past and present', signed at
the 11th hour just before the next President is sworn in to office.

Novice-class operators are permitted CW and SSB operation. According to
your logic, then, all of the material on the subsequent license
examinations is irrelevant since a Novice has already been tested on
"stuff to be competent to operate a radio" (in those modes, at least).
Especially since that material does little more than grant them access to
bigger and better chunks of SSB spectrum.

Message-ID: <36b4a2c7.4025877@news.garlic.com>
Source record: 151928

I disagree 1000%. It is deliberate deception. I would bet fewer than 10% of FRS users know what the maximum legal power is. If someone says "this is a family radio" and hands them a 2m HT, they'll think it's FRS.

Look on the base page (www.kenwood.net/frs_page.cfm) and also note the address "frs" not Family Radio.

Directly under the FreeTalk XL paragraph, they begin a paragraph with "What is FRS? The FCC authorized...as a(n) unlicensed..."

If this is not deceptive, why not put the ham gear on this page? How about all the Land Mobile radios under "Family Radio"? They'd make GREAT family radios too!

This is VERY deliberate and is an attempt to get unsophisticated FRS buyers to go out and buy the FreeTalk XL because they want to "Get some distance out of your fun.." as they say. Why? Because the FreeTalk XL "is essential gear for hobbies, sports and leisure time activities."

Of course, a LICENSE isn't mentioned as essential.

Me thinks this is crap and doth stinketh.

SB DX @ WW $OPDX.394
Ohio/Penn DX Bulletin No. 394

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 394
BID: $OPDX.394
February 1, 1999
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WA2MOE, WB2RAJ/WB2YQH & The 59(9) DXReport, W3HC, W3UR & The Daily DX, KN4T, N4JF, N4GN, WB4ZNH, KL7AK, W6/G0AZT, K8PYD, W8UVZ, WD8MGQ, KI0LO, New York Times, CO8TW, DJ2MX, DJ5AV & DX News Letter, EA5BYP, F6AJA & LNDX, G4BUE & DX News Sheet, G0PSE, HJ3PXA, JW5NM, LU1DZ, OH2BH, OK1RD, PY7ZY, RW3RQ, VK3AKK, YO2LDE & South-West DX Bulletin and ZS5BBO for the following DX information.

3A, MONACO. Leo, K8PYD, reports to us that he will be on the air from February 18th to March 2nd, possibly as 3A/K8PYD. Operations are to be mainly RTTY with some CW.

3B8, MAURITIUS. The "DX News Letter" reports to look for Hans, DJ7MI, to be active this week from February 2-20th as 3B8/DJ7MI. He will be on the air especially on CW on the lowbands. QSL via bureau to DJ7MI.

3W, VIETNAM. The "DX News Sheet" reports Nikolay/UA0FM (3W5FM) is now active on 160 meters (1825kHz) at his sunrise (2316z) for Europe. QSL via his home callsign.

5A, LIBYA. Abubaker, 5A1A, continues to be active on 10 meter CW mostly weekends around 28040 kHz between 1545 and 1630z. Also, check for SSB activity on 28445 around the same times. For low band activity, check between 2100 and 0000z on 160/80 meters. He says QSL by "Registered Mail" ONLY to Box 74421, Tripoli, Libya.

5H, TANZANIA. Ralph, 5H3RK, is another very active station from here. Some may remember Ralph who was previously active as Z21HS a couple of years ago or so. He is a very active CW op who likes low bands when possible. Over the last week, he has been heard on 20 and 40 meters between 2000 and 0400z. He will be attached to the Swedish Embassy for the next couple of years. Between Ralph and Dave, 5H3US, they should provide a lot of DXers with Tanzanian QSOs. He has met Dave, 5H3US, and

perhaps they will get together for a serious CQWW 160 effort. So far, from temporary quarters, he just has a multi-band vertical on the air. But he has a yagi and will probably put it up soon now that he's in permanent quarters. QSL via Ralph Karhammar, 5H3RK, PO Box 9274, Dar es Salaam, Tanzania.

5H, TANZANIA. The "DX News Sheet" reports Maurizio, IK2GZU, will be active February 8-28th, while working at a mission. No callsign was mentioned. He will be active on the HF bands using a tri-band beam and dipoles. QSL via home callsign direct or bureau (E-mail request can be sent to ik2gzu@spidernet for bureau cards).

9G, GHANA. The "DX News Letter" reports that Seth/9G1OO, Arie/PA3ERA, and Bert/PA3FUE intend to activate the club station 9G1AA in Dormaa-Ahenkro during February (no specific dates given). Look for them to be active mostly on CW on 20/15/40 meters. DO NOT QSL via PA2FAS. The correct QSL route is via PA3ERA, Arie Barendrecht, Taankade 10, NL-3311 TN Dordrecht, The Netherlands (also for 9G1OO and PI4DEC).

BT1WW, CHINA. During this past weekend, the Chinese Radio Sports Association (CRSA) aired a special event experimental station BT1WW for 48 hours to participate in the CQWW 160-meter Contest from Beijing. What was unique is that the antenna is some 300 feet above the ground, but the sad news is that the location is rather noisy and mounting a receiving antenna was impossible. The operators of this event are BA1AB, BA1OK, OH2BH and others.

CT3, MEDEIRA ISLANDS. Alain, F5LMJ, will be active as CT3/F5LMJ from February 13-20th. He will be active on CW on 10, 14 and 18 MHz (10110, 14030 and 18080 kHz). However, his activity will be limited because he is on vacation.

HK0, SAN ANDRES. Carl, WB4ZNH, reports that he and his wife (Martha, WN4FVU) are going on a contest DXpedition with a group from the Woodbridge Wireless from Northern, VA, as HK0/W4DC. He states they will be there for two weeks in San Andres, "alternately relaxing, building the station, killing ourselves during the contest and then packing it all back up again." Their operation will take place during the ARRL DX Phone Contest the first full weekend of March. He also mentions that they are attempting to get a special distinctive Columbian callsign for the duration of the contest and that it might not be possible, so if not, they will be signing HK0/W4DC. For more information, check their Web page at: http://www.pwcweb.com/wwi/DXpedition/

IOTA NEWS......
IOTA 99. The annual convention of the IOTA will take place in Alicante, Spain, April 24-25th. All the details of this great event can be found on the URE's WEB site at: http://www.ure.es

NEW ONES. Joe/I2YDX and Roberto/IK2WXZ will be signing E30LA and E30MA resepectively by the time you read this, but their first activity will be from Dahlak Archipelago (AF-038) and may be over (QTH February 1st).

However, they plan to activate two non-number Eritrean IOTAs, one from February 2-3th and the other February 6-7th. The dates of the two unnumbered ones will depend on the weather and any local problems. QSLs will go via their home callsigns.

NA-074. KL7AK will be active from Nunivak Island, Alaska, located in the Bering Sea about 150 miles West of Bethel, Alaska. This is a RARE ONE for IOTA. KL7AK will be active June 4-7th. There will be two stations on SSB/RTTY/CW. Check the usual IOTA frequencies, but mainly 14260 kHz. QSL to KL7AK via the callbook address or Bureau.

SA-008. The crew of the Ushuaia Radio Club activate LU8XW during the CQWW 160 Meters Contest this past weekend. Their location was on Tierra del Fuego Island.

SA-046. Ciro, PY7ZY, reports that between February 6-17th, he will put Itamaraca Island on the air as PY7ZY/7 on CW/SSB. QSL to: Cicero Xavier da Silva - PY7ZY, P.O. Box 501, 58001-970 - Joto Pessoa - PB - Brazil. This visit is in preparation for the IOTA Contest in July when the callsign ZX7XX will be activated. Operators will be PY7XC/Jim, PY7ZY /Ciro, PY7ZZ/Fred, PR7PO/Alex and PR7FB/Jack.

EU-011. TOM/G0PSE and STEVE/G4EDG will be active July 22-29th, on CW/SSB 160-10 meters on St. Mary's Island (Isles of Scilly) using the callsign GB0SM. They will also be participating in the IOTA Contest (July 24-25th) with the callsign G5M. QSL via Bureau or Direct via G3WNI: Bill Lindsay-Smith, Way Close, Madford, Hemyock, Cullompton, Devon EX15 3QY

ITU NEWS. From Saturday's (Janaury 23rd) New York Times: "In a step towards virtual statehood, Palestinians are about to be granted a form of long-distance independence, their own country code for international telephone calls..... Over Israelei objections, the International Tele-communications Union quietly announced this month that the area code 970 had been reserved for the Palestine National Authority territory in the West Bank and Gaza. The union, a United Nations affiliate based in Geneva, agreed in principle to give the Palestinians a code at its membership meeting in November..... The International Telecommunications Union governs the global allocation and regulation of area codes, broadcast frequencies, Internet bandwidths and satellite signals. It voted to give Palestine its own country code, as well as its own radio call signs and broadcast frequency assignments."

J3, GRENADA. "The 59(9) DXReport" states that Bill, K4LTA, plans to be active as J3/K4LTA from March 10th-April 10th. QSL via homecall.

KH6, HAWAII. Look for Richard, K5NA, to be active this month as KH6X, February 16-27th. Activity includes an entry in the ARRL DX CW Contest.

PIRATE ALERTS.....
Rob, HJ3PXA, reports that a station signing OA4CRK is operating from Bogota un-licensed. This station has operated several of the last contests and has recently given out QSOs leading everybody to believe

he is operating from PERU. He never says portable /HK3.

Elmo, EA5BYP, QSL Manager of 3C1GS, reports a station using the callsign 3C1GS has been active on CW. He states this is a pirate because 3C1GS only operates SSB.

More on VK4XN. Ken, VK3AKK, suggests that the reports of a VK4XN may not be a pirate but a case of "poor hearing". As a DXer, Ken states that he has been watching the 80m DX window since it was opened to VK. He has spoken to other VKs and they have never heard a VK4XN there. But, there is a VK2XN, Wayne, and he is very active there as well as 40m and other bands. Wayne is located in northern VK2 and is usually on the air with a group of VK4s. So, this may be the reason, perhaps, a check of the bogus QSLs against Waynes log may reveal the answer.

POSSIBLE NEW ONE? Foreign Minister Ali Alatas announced Wednesday, that Indonesia will propose to the People's Consultative Assembly, the nation's highest constitutional body, that East Timor be allowed to become independent. Alatas said the Indonesian government will put the proposal to the assembly by the end of this year. The assembly would then vote on whether to allow East Timor to become an independent country.

QSL INFO AND NEWS.....
Daniel, YO2LDE, reports that he has received the QSL cards from the printer for his past DXpedition to Albania (ZA/YO2LDE - 1997). He states that he has sent all the QSL cards out for this DXpeditions via bureau or direct. If anyone has not received a QSL, Daniel suggests to go to his Web Page to first check the interactive Log Book for their contacts before re-QSLing. His Web site is:
http://www.qsl.net/yo2lde/search.html

Juan's, CO8TW, QSL Information and Log for this past weekend's CQWW DX CW 160 Contest are as follows. QSL to: Juan Carlos Veranes, CO8TW, PO Box 8, Santiago de Cuba, CP 90100, CUBA. QSL Manager is W3HNK. His E-mail address is: co8tw@co9nla.uo.edu.cu
His contest log will be available on the NFDXA's page Web at:
http://db-sales.com/nfdxa/logs/logs.html

Harry, RA3AUU, SRR Vice President/Contest Committee, reports that the ONLY incoming IARU affiliated bureau for Russia is Box 59, Moscow, 105122, Russia.

QSL CARDS FOR ZS75SIG. QSL cards for this special event will be sent out towards the end of February/March. A request to all stations that worked this event is to please send QSL cards as soon as possible as Edwin, ZS5BBO, wants to get the QSL cards all posted ASAP. QSL to ZS5BBO, PO BOX 211032, Bluff, 4036, South Africa.

QSL Manager Mario, DJ2MX (ex-DL1FDV), has a new address. He is the QSL Manager for following stations: T94DX, T94DO, VK4SK and 4N4MX. Please use the address: Mario Lovric, Am Oelberg 11, 61231 Bad Nauheim, Germany/EU. Mario mentions many USA and JA stations are sending ONLY 1 USD for return postage. He states that this is not enough because

it cost him 3 DM (that is about 1.8 USD). For Europe, 1 USD OK. All other countries, outside of Europe, must send 2 USD or 1 IRC. Mario will answer ONLY if enough return postage is enclosed! All other QSLs would be sent via the bureau.

SPECIAL EVENT. Operators CO8DD, CM8SW, CM8YK, CO8TW, CO8HF, CO8KL, CO8YL, CM8UF and CO8IK will activate the station CO9NAA in commemorating the 146 anniversary of the birth of Jose Marti, the Cuban's national hero. They will be active on all HF band with two stations. QSL via CO8RCB: PO Box 5, Santiago de Cuba, CP 90 100, Cuba. E-mail request: co9naa@co9nla.uo.edu.cu

SPECIAL EVENT. Another country/station (please refer to OPDX.393) has announced that they will be active with a special callsign to honor the work done by the coast radio stations around the world for almost 100 years. Communication on CW will stop on February 1st at most of the world's coast radio stations as the new GMDSS system will take over communications with ships. Look for JW0LGS to be active February 1-28th. Operations will take place form Svalbard Radio/LGS - the world's northernmost coast radio station. JW0LGS will be operating CW only 1830, 3510, 7010, 10110, 14010, 18070, 21010, 24890 and 28010 kHz. Operators will be JW5NM and JW6MY. QSL via JW5NM, Box 498, 9170 Longyearbyen, Svalbard Island, Norway.

SPECIAL EVENT/PREFIX. From February 1-7th, look for operators RK3RWR and RW3RQ, from the "Michurinsk Contest Groupe", to activate the special callsigns UE3RCG and UE3ROM, respectively. Activity will be on all bands CW/SSB and the WARC bands. You can receive a "MCG-MEDAL" trophy for QSOs with these 2 stations during this period. This trophy is free, but please send QSLs and LOG data to: Andy B. Yatskiv, RW3RQ, P.O. Box 30, Michurinsk 393740, Russia. For more details, send E-mail to: valer~su@html.ru

T3 DXPEDITIONS (Also 3D2). Members of the OKDX Foundation, Jarda/OK1RD, Jiri/OK1RI and Slavek/OK1TN will be active from West Kiribati (T30) and Kanton Island (T31) or Banaba Island (T33). The team will first start their activity on February 25th from Nadi, Fiji, for 4 days as 3D2TN. On February 28th, they will take a flight from Nadi to Tarawa, Kiribati. From March 1st, for about a week, they will operate as T30RD from Tarawa. During their time spent in Tarawa and depending on the current situation there, they will hire a boat with 2 sailors to sail to Kanton Island or Banaba Island. They are hoping that on March 10th or about, their activity will start from Kanton Island as T31RD or Banaba Island as T33RD and last until March 28th. They spend more time operating in Tarawa until April 8th, where they will take a flight back to Fiji and further via L.A., Frankfurt to Prague. The crew's operations will be on all bands including the WARC bands with two comLplete HF stations on CW/SSB modes only. QSL cards for all operation via OKDXF.

T9 & ZA OPERATIONS UPDATE. Daniel, YO2LDE, provided OPDX with another update and states that these operations are a "GO". Operation will start February 15 and end on February 25th (He did not say which country he will start in). Daniel will operate with the callsigns ZA/YO2LDE and T9/YO2LDE. Suggested frequencies are:

RTTY - 3588, 7038, 14088, 21088 and 28088 kHz
CW - 14020, 18090, 21020, 24900 and 28020 kHz
SSB - 14215, 18145, 21215, 24945 and 28495 kHz
QSL direct ONLY to YO2LDE: Daniel M. Vuescu, Zadei F3-1-7, RO-1700 Resita, Romania. Or to N1NJ: Tony Naglieri, 22 Sherwin Street, Ware, MA 01082-1020, USA. DO NOT SEND QSL VIA "YO (Romania)" BUREAU !!!

VP9, BERMUDA. Dick, N1RCT, will be on a RTTY DXpedition now through Thursday, February 4th, as VP9/N1RCT. Activity will be from the North Shore on 20 meters RTTY. He will use a multi-band dipole and a 100W. Special attention will be given to JA/SE Asia from 2200-2300z each day. Send direct QSLs (with SASE, etc) to: Eddie Schneider, W6/G0AZT, P.O. Box 5194, Richmond CA 94805. QSLs can also be sent via Bureau to N1RCT ONLY (no bureau to W6/G0AZT!). There is a minor Web page setup on:
http://www.megalink.net/~n1rct/dxcc/vp9.html

ZD9, TRISTAN DA CUNHA. Ian, ZD9IL, is not very active at the moment as he is having transceiver problems. His QSL Manager ZS5BBO will advise us when Ian has his transceiver up and running again.

ZS, SOUTH AFRICA. Edwin, ZS5BBO, reports to OPDX that he is still active daily on 20 meters (+/- 14205) from 1500z daily.

Hi!

I believe someone out there may have info on how to build a PC serial interface to control my Kenwood TS950S ham rig.

Any information would be very gratefully received.

Maany thanks and 73

Mike G0EFO (Guildford, England)

2318. Re: Why hamshacks?

>>Why do so many people have "ham shacks?"

Love that Jargon. Along with ham shack there is rig and handle and using Q signals on phone and referring to yourself as "we" and destinated and kerchunk and CW and fine business and old man and sky hook and flat top and ham and XYL and full gallon and bottle and drinking 807's and home-brew and HT and on and on and on.

Some shacks are in the closet and others are in the garage. It is wherever you keep your setup. Much ham jargon has fallen in disfavor over the years. Much has been created. Some has slipped over from CB (horrors). That is the beauty of a hobby's jargon, we can make or destroy it at will. Keep your eye here on Usenet for the word police. They post from time to time and will let you know what (they think) is currently correct jargon...

PSK31 has taken off like a rocket since the release of G3PLX's excellent
freeware Windows sound card program. In the last couple of weeks, activity
has grown to the point you hear more PSK31 on 20m than RTTY. S/MT-Hell
is gaining popularity too, thanks to the excellent Gram42 sonogram software
and simple BASIC transmit programs. Both of these modes are conversational,
and work very well with weak signals and in the presence of interference (better
than CW). Plus there's a group (mostly Canadian) still using Coherent and Africa
on HF for very weak signal work. The ARQ protocol modes may be a bit stagnant,
but the FEC stream methods seem to be experiencing a good surge of activity.

Full MT-Hell might run foul of FCC regulations for those of us here in the states,
but it is also gaining popularity overseas (New Zealand mostly). MT-Hell is much
faster than S/MT-Hell or Feld-Hell, but it transmits multiple tones at the same time,
like Piccolo (which sadly, we would need a STA to use).

I originally thought that the FCC's baud and bandwidth limits on HF put us at a
disadvantage for many of the digital methods that can be used for voice and
image transmission. But a careful rereading of Part 97 shows that we can do
digital voice, in the voice subbands. The baud and bandwidth limits imposed
in the data and RTTY subbands don't apply to digital voice. I haven't seen any
amateur examples of this technique yet, though the military has used it on HF
for some time.

We can't do SS or higher speed data, like Clover 2000, on HF without a STA however.
That's a real pity, Clover 2000 has practically taken over the maritime HF niche
from the now defunct CW messaging operations, and would work well for amateurs
too. SS is, of course, an excellent technique for band sharing, and would allow us
to have more stations operating in a band segment without the serious interference
problems that manual frequency choice often imposes. It also is very robust against
skywave multipath. The military has been operating HF frequency hopping systems
for over a decade with very good results. But the rules don't let us experiment
with this on bands where it would be most useful. (Most of the advantages of SS
are moot on our nearly vacant upper UHF bands.)

In a different context, we're seeing digital radio becoming more and more real as DSP moves closer to the front ends of our radios. The excellent Kachina 505 is one example of this. The DSP augmented R2 recently presented in QST is another example. Switchmode PAs are also coming closer to amateur use, with another article on them in QEX. I haven't yet seen that taken to its logical conclusion with envelope elimination and restoration techniques to give other than CW/FSK capabilities, but that will certainly come. It is now standard practice in broadcast systems. The classic superhet, and Class AB1 PAs, may be set to rapidly fade from the stage on HF.

There isn't a lot happening at VHF/UHF. Better techniques than 1200 baud Bell 202 have existed in amateur radio for over a decade (notably the 56 kb WA4DSY RF modem), but relatively few amateurs have adopted them. Except for APRS, packet activity is actually declining in many areas. TAPR is playing with 900 MHz SS, but frankly I don't see that going much of anywhere. It seems to be a solution in search of a problem on that band (if they were doing it on 2m now, that would be a different story, but the rules don't allow that).

A good part of the decline of packet seems to be due to the lack of imagination shown in *applications* of packet technology. With little beyond BBS stations on packet to provide something to do, and no real packet networks, packet seems pretty dead. Until some new applications come along demanding a real packet switched network, I don't see this changing much. (There are pockets of activity where real packet switched networks exist, GRAPES for example, but they are few and far between.)

>>.how would the FCC know if a license expired due to
>>death or disinterest?

Oh, I suppose they have computers linked to the government's other computers. When someone goes SK, usually a local government office is notified (FD, PD, EMS, ME). Somewhere along the way, the federal government is then notified so that the person's fingerprint card (Criminal, Personal, Applicant, if any) can be pulled and placed in a "deceased" catagory. Because the FBI receives over 27,000 cards per day, there is a serious attempt to remove cards belonging to deceased individuals.

The FCC could also be pinged by the Social Security computers, or by computers from any of a dozen other government offices.

Hi. I have a question or two that you might be able to help me out with. Untill yesterday I was a No-Code Tech licensee. I passed the 5 wpm test to upgrade to a Tech Plus licensee. My question is how soon can I get on the air using my new privellages? Do I have to wait for my license change to show up on the FCC database, or can I operate today signing /KT. Any help answering my question will be greatly appreciated. If posssible, please email me at KD7DBL@aol.com.

Thanks and 73's

Well, Christmas this year was good to me and I was able to get that HF rig I wanted, along with a tuner and a power supply. It seems I'm all set to go, except for one thing: I see that both the radio and the tuner have GND screws for connecting them to a ground source, I suppose it must be to get rid of unwanted RF and currents.

My equipment is located on a second floor, and the nearest point where I can bring in a ground cable is about 10-12 feet from the ground, so between the equipment and the copper rod there'll be at least a 10 feet of wire. Will grounding still be efficient under these conditions? What caliber wire should I use to maximize ground efficiency? Any other grounding strategies which might work better than the one I have planned?

I just moved to a new house here in Tampa FL.

The ground is sandy.

For a ground I got 2, 10 foot sections of 1/2 inch hard copper pipe.

Clamped a water hose to one end and let it drill it self down.

I then soldered the next section on and went down another 10 feet so now IM down 20 feet into the water table.

My questions are:

1. Am I down far enough? I could probably go to china.
2. Should I put down more grounds?

Thanks,

John Finley N4SPL
Tampa, Florida

Why is so much importance placed on CW? It is just another mode!!
The testing process should be revised to to permit demonstration
of proficiency in a number of areas rather than CW. For example,
passing a more difficult theory test.

It is time for change. CW is nothing more than a hazing ritual that
facilitates admittance into the "good old boys club".

The radio room on board ships very early in the century were in fact external shacks on deck, separate from the interior of the ship. See Baarlag's "Famous Sea Rescues" (formerly titled "SOS To The Rescue"), c1935. Early radio equipment was electro-mechanical in nature and very noisy. It was segregated from living spaces to help isolate the noise it generated.

Jim,

Amateur radio is not declining because of the code requirement. Amateur radio is declining because amateurs no longer build "simplistic transmitters"... It is a sad comment but true... I doubt that more than 5 to 10% of amateurs are interested in building anything...

But the really sad part is that the exams for a "General" class license are easier now than the novice license I took 28 years ago... so.. how many of you out there know the difference between a "Hartley's" and a "Collpitts" oscillator?

We need more Amateurs who are willing to put in the effort to learn Electronics, Morse Code and whatever to help advance the art of our hobby... to many are just willing to sit back and enjoy the fruits of the labor of a few... I ask you all.. how many "tower raisings" have you been to.. how many receivers or transmitters have you built (I'm not asking you to design them... just get a schematic, read it and build the device)???

I think the tests should be tougher, more code, more electronics theory, more everything... Amateur Radio does not need to be the next "CB"... we need serious hobbiest's who's ability to communicate is not based on the balance in their checkbooks to buy 10KW amplifiers. The original grant of frequencies to amateurs was because we were adding to the general knowledge base of radio theory... it's about time that we got back to our roots (And I will take the time her to thank all those amateurs who have strived to continue to advance the art of radio communications... :)

For those of you who are no-code fanatics and consider this a "Pro-Code" argument.. here is my message to you:

"-... .. - . -- ."

>licensing requirements.

My friend, a long-time shipboard CW operator, would like to become
a ham, but he's only interested in CW communications. He feels that
learning about satellites, FM, SSB, pulse, RTTY, FAX, SS, AMTOR,
CLOVER, packet, SSTV, FSTV - all are *unnecessary* to amateur
radio licensing requirements. He never plans on using any of these
modes, yet, he'll flunk the exam if he doesn't learn about these topics.
How can we accommodate him, Cec?

Which of us are qualified to determine just what is necessary and
unnecessary to get licensed?

You are DEFINITELY deep enough if you are below the water table. At this point I think you would benefit from more, and not deeper, ground rods. With two, you probably got a pretty fair setup already, though.

Is the water salt or brackish there, which it may be if very near the coast, or fresh? That will make a difference.

Watch out that you don't have 1/4 wave run to your ground, though. This could be a problem with upstairs shacks on some frequencies.

Wire will provide a DC ground, but may not provide an adequate RF ground due to skin effect, especially on the higher bands like 10 meters. I use copper strap about 2 or 3 inches wide and have had pretty good luck with it. Of course, the second floor location complicates things because of the length of the run. As a start use whatever you have available and see if it is satisfactory. Be sure and use a single point ground configuration to avoid ground loops between the tuner and the rig. You might try grounding only the tuner and then allowing the coax from the rig to the tuner to be its ground path. Of course, all of this supposes that you are using an antenna the requires the use of the tuner to begin with. There are no black and white answers, each system is different and the band can also affect the result. Experiment with it and see what works best.

This appears to be a "serious" question, so I shall try to answer it in a like manner.

Back before any regulation of the radio spectrum "hams" basically picked their own calls. Usually the operators intials. This was followed by a number later on...i.e. 1AW. Later on this had to be ammended to a PREFIX to denote the country. In the US it began as "DE". This was replaced by W shortly after. I.E. W1AW. As you can see the original "hams" were identified by a one by two call. Shortly followed by one by three calls i.e. W4NTI. Then by K one by two and K one by three. (this may not be in exact order).

To answer your question: Until the late 60s when "incentive licensing" was shoved down our throats you could tell if a person had been around a while. At the inception of incentive licensing a person with a one by three or whatever could get a one by two, if he was a extra class licensee. Thus the confusion began.

After all the one by two and one by three W/K calls were issued the FCC went to WA and WB and WD prefixes. In the 70s the FCC opened up a whole bunch of new callsign blocks, which is what you have today. Now you can pay your money and get a one by two or whatever. So as usual the government has screwed up a good thing.

Dan/W4NTI

> Great!!!!! Another excuse to avoid learning cw. It bad for your health.
Look...I have been licensed for nearly 38 years.. I started before that to
learn cw with a hand KEY. I stayed with a handKEY until I passed my general
3 months after getting on the air as a novice. I went to a BUG, and later
to a KEYER. I am a HEAVY user of CW and I use my right hand. I do not have
carpal-tunnel and after 38 years don't expect any.

OPerate with the /KT as soon as you have been told you passed and have the paper from the examiner in hand. As soon as the update shows up in the FCC data base, you can drop the KT. You nolonger have to have a license in hand to operate.

>Doug, Ive seen many FRS HT's however Ive never seen a base style unit. Do
>they make them?
>
>

There has been speculation about developing a base unit for FRS. Because FRS, by law, must use an antenna attached to the radio (no coax allowed), one theory is that the radio could be mounted at the antenna location and controlled remotely.

There also has been a discussion about using Radio Shack's store-and-forward simplex repeater for FRS.

One manufacturer just came out with a mobile FRS which has a mag-mount antenna and a permanent cable. No one is sure how this works or what they did to pass type-acceptance. Early reports are that it is not any better than a handheld INSIDE a car. Otherwise, I would be telling you to try it as a base unit with a fixed power supply.

For more information, visit alt.radio.family.

:in ohms too..)

Hey NewKirk, I was being facetious when I said that. I wasn't REALLY thanking you. I was trying to point out that your assessment was WRONG. I have been reading schematics MUCH longer that you have.

The discussion was not with schematics in mind... 'til you got into it. Your comments were off base. (apples and oranges) I was talking about manuscripts and you're talking about schematics. I had even said I realize that what I was saying was not 'CONVENTIONAL' and yet you have to say what I had said is wrong. Next thing you'll be trying to tell me which way the current flows.

2352. Best use of limited power?

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-31 00:00:00 UTC
From: brewsterc@excite.com
Message-ID: <brewsterc-3001991822110001@dcp2-21.msp.infi.net>
Source record: 151976

I'm operating from alternative power and am trying to find the best
compromise between a real QRP rig, which is probably a little lower power
than I have to use, and standard 100W sets, which eat up 200 or 250W. Some
of the mobile units look like possibilities. I asked similar questin
earlier, and people suggested the Yaesu FT-7, Icom-730, and Ten-tec Scout.
Are these real QRP or are they in the gray area that I'm trying to
describe? I'm thinking of output power of, say, 20-40W with as little
extra power consumption as possible. Thanks for any further information.

Source record: 151977

>
>Why do call-signs range anywhere from 4 characters to atleast 6?
>Do fewer characters mean older license?

It did until 1970. Prior to that, calls were issued sequentially, with 1X2 patterns. (W1AW). Then they ran out so they went to 1X3 (W4AAA). Then they ran out of these, so they started with K's in 1X3 patterns. (K9ABC). Then they ran out of those, so they started with KA#XXX. Some areas are up to KG#XXX.

But, in the 70's, Extra Class licensees could, for a short time, request any call they wanted. I traded in WA5ZEM for K5PF.

Only recently did the FCC again attempt a vanity call sign program. Today, the shorter calls indicate a higher grade of license. Keep in mind, however, that some Amateurs do not change their calls, even after upgrading. A call sign is kinda like your name. You get attached to it.

Moral to the story: Treat everyone with respect! <grin>

I do a lot of mouse work in my job and am always fighting off carpal-tunnel problems. I do things like using a trackball, using my left hand, etc. Anything but orthodox right-hand mouse operation. Now I'm learning CW and finding I almost have to use that position, and CW involves about 1000 times as many downward taps as my job. This could get serious. I'm trying holding the key sideways on my lap, etc. Anyone else dealing with this?

While you're right about reading in things that are not there....
Nothing different than any other marketing/advertising 'hype' in any
other industry. (Have you heard the one about the 12AMP vacuum cleaner
motors lately ?)

>Only someone dumb enough
>to not know the difference between RF output power and Audio output
>power(500mw speaker)Could be confused by this ad.AB7RS

Think about what you just said. Do you reallly think that the average
FRS/GMRS user/customer is RF literate ? (About as techinically literate
as the average housewife pushing a suck-broom). Most of them have the
technical ability of the average CBer. OTOH why do they need to know
anything more than 'push the button and talk, release the button and
listen', to utilize that service ?

The Rockwell-Collins URG-III system is pretty awesome. It has embedded
ALE, supports FHSS, and STANAG 4285 data transmission. Of course
it can handle less capable modes like SSB, FSK, and PSK as well if necessary.
It supports MIL-STD-114A, so it'll work with IDM and ANDVT HF narrowband
digital voice technology too. The only thing I don't like is that the control software
runs under Windows NT, but because it obeys the standard military radio API,
that functionality could easily be ported to Linux. I'd consider it a fine centerpiece
for a progressive amateur's HF station.

Of course I know you mean a 30 year old KWM-2 or S Line, but Collins hasn't
remained frozen in time at the level of those early SAC radio systems, like some
amateurs appear to be. Their new gear is very much SOTA. The interesting
thing is that the basic technology is approachable by amateurs. The RT-2200
uses direct conversion, DDS, and DSP, just like the featured receiver project
in a recent QST. Technically minded amateurs can build that for under $200.
And the HPAs use switch mode operation, just like was featured in another
recent inexpensive QST project. Most of the magic is in software/firmware,
as is the case with almost all modern communications systems, and that's
tabletop stuff, within the reach of any amateur with a few signal processing
textbooks and a computer.

>dealing with this?

This was known as "telegraphers paralysis" in the early days of radio and landlines. An ad for Vibroplex used to brag that their keys helped prevent this condition.

Remember, however, that a telegrapher "pounded brass" eight to 12 hours per day...far more than the average Amateur. Even so, you might consider a bug or electronic keyer.

One even can send slow Morse by tapping a bug's dash lever with your wrist resting on the table.

My most demanding task as a radio telegrapher at a coastal station was banging out the weather and traffic list every few hours. It was 15 to 20 minutes of steady keying. The best technique was to loosen the tension on the spring and actually lift the key up and push it down. The decreased resistance to downward movement made things bearable. Have just enough tension to keep the contacts apart when not in use.

Yet you seem to think that they have the time to waste on OOK Morse
conditioning. To steal a line from your own book, perhaps they should
use a bit of that wasted time to acquire the necessary skills. With today's
VLSI encapsulating entire radio subsystems on a chip, building a competent
SOTA radio is much easier than it was in the days of vacuum tube HW101s,
yet plenty of bakers, teachers, bankers and the like found the time to acquire
the skills to do that.

If you'd bother to lift the lid of a modern radio, the first thing that strikes you
is that there isn't much to it. Instead of being jammed with parts, there's
a handful of ICs doing all the work under the direction of a bit of embedded
firmware. I'd direct your attention to the various DSP enabled R2 varients
as example of how easy this is to build.

>>>I choose to use
>>>Morse just as I choose to commute by bicycle. There are faster modes

>
>If I don't have the necessary skill needed to pursue a desired
>activity, I *will* try to develop the skill. But eight years of
>medical training is beyond my interest.

Then you're admitting you aren't competent to do your own repairs
on the complex decoder you use. At least I know I can repair my
DSP decoder if necessary, but even the guys at the Mayo Clinic
don't understand yours well enough to always be able to repair it.
The nice thing about machine methods is that anyone with a modicum
of interest can come to fully understand their workings, the same can't
be said about your wetware modem. It is horrendously complex, often
performs erratically, and no one is exactly sure how it works. By contrast,
machine methods are very simple, reliable, and easily understood.

>From the looks of you Mainlanders vacationing here in Hawaii,
>a bit of walking/biking would do you some good. I can imagine
>you driving one block to the grocery store rather than using
>your feet, and cruising around your home in one of those electric
>wheel chairs. After all, you did admit that your hand-writing
>skills have vanished due to not having picked up pencil or pen to
>write with this last decade.

It is true that my handwriting skills have atrophied, but my skills
manipulating SMD components have not. Nor have my skills
at the keyboard deteriorated. That's because there is a current
use for those abilities, while there is no real use for hand written
documents anymore.

As to the level of my physical fitness, you might outrun me (I was
never a sprinter), but I'll wager I can benchpress more than you.
I'm no longer 20, but I can still do many of the things I could do
when I was 20 (and I was hell on wheels when I was 20). I'm just
a bit smarter about what I do now, and don't get hurt as often
as when I depended on just brute strength to get the job done.

That's a major theme here, working smarter rather than working
harder. It produces better results because it leverages our abilities
beyond their unaided limits. I had to move a 1,000 pound machine
in my shop recently. I couldn't lift that unaided, but with the aid of
a very simple machine I assembled in a few minutes, I was able
to move it easily. It would seem that you'd workout daily for months
or years in the futile hope of becoming strong enough to lift it by
brute strength and awkwardness rather than using your intelligence
to devise a better way.

Let us hope he was listening to 14.300 this afternoon.
It seemed as if it was business-as-usual. AF2Y and KC1ZQ
trading insults and threats of bodily harm (including the use
of weapons) between each other. While these two limp-wristed
wussies would probably be afraid to look at each other in
the eye, it still sends a bad message. Their antics soon drew
out the tape players, noisemakers, 4-letter word using catcallers
and other assorted radio screwballs that have populated 14300
or 14313 since 1990.

> It is encouraging to hear Hams act in a civil manner once again...it also

> We Hams deserve better than what we have been getting. Hopefully Mr.
> Hollingsworth will be around the bands for a long time to come.

Let's hope Mr. Hollingsworth sends a REAL MESSAGE by slamming
one or both stations noted above. They even recognized that they
were encouraging the un-ID'd QRMer peanut gallery. One ham
in Florida even tried to talk some sense into KC1ZQ's somewhat
miniscule mind and ZQ actually said he enjoyed "stirring up the s++t
on 14300". Nice. Just what we need eh?

Very interesting...

Hey "Save CW"... how about shutting the fuck up before you bring anymore shame on your family. Do you realize that you have created some terrible irony here?

The whole purpose for "Saving CW" is that it is a low bandwidth mode that requires minimal equipment. This is an essential in emergency communications, one of the cornerstones of amateur radio itself. Well, I took a peek at your message headers... it seems that not only did you create this message in some fancy assed Windows based newsreader, but you cross-posted to 5 different newsgroups. Talk about wasting bandwidth and not understanding the fundamentals... You know, if the founders of the ARPANET were alive today, they would shove a VT100 terminal up *your* ass (and look out, coz they ARE still breathing...) So tell us again, what _exactly_ is your philosophy on CW? Is there really one, or has the swelling in your nuts just not gone down since you actually passed the code portion of the exam?

You come back when you're running PINE on a greenscreen and we'll talk about why the stone ages should live forever; until that moment, keep your narrow-minded
"I-am-the-idiot-that-keeps-ham-radio-synonymous-with-social-retard" comments out of my bitstream.

Cliff Beckwith
KE4UPZ

PS - I removed some of the groups you were posting to... totally irrelevant to post this thread to rec.radio.amateur.antenna or rec.radio.amateur.swap; they really don't want to see this stuff....

One of the reasons that Amateur Radio is declining is because of the
code requirement! Amateurs do not build simplistic transmitters anymore.
Code is nothing more than an ancient hazing ritual! It's time to let it
die and increase the amateur population!

Steve Ellington N4LQ wrote:

Remember that all the digital whiz bang menu driven microprocessor stuff that makes modern storebought rigs such a pleasure to operate also suck up juice. A homebrew project with careful attention to transmitter efficiency, using single conversion with a regular capacitor tuned VFO will reduce your current needs considerably. Also, consider going with headphones, or better yet, walkman style earbuds for audio. Make your oscillators do double duty by switching in/out of varactor diodes in the oscillators for the CW offset, and use them for the reciever too. You could go direct conversion, but that wouldn't save enough energy to be worth giving up single frequency reception, I don't think.

If saving 300 or 400 milliamps is not an issue, might I suggest simply opening up your full featured rig, locating the drive pots, and adjusting them for the level you think appropriate? I have a TS-50S that has had that treatment. Out of the box, there are three power settings: 10, 50, and 100 watts. I lowered the 10 watt output setting to 4 watts in this manner. The 100 watt setting, alas, is a fixed resistor in the '50S.

Output power is a funny thing... in theory, there isn't much difference between 100 watts and 50 watts out at the receiving end of the signal, but many times, my sig has gone from unreadable to fair copy by turning up the power from 50 to 100. Depends a lot on the noise level, I guess. Anyway, you will certainly see some improvement by increasing from 5 to 20 or 30 watts.

Since you are concerned with getting the most bang for your buck, energy-wise, might I suggest that you take a closer look at your antenna/feedline/ground setup? Optimizing these key components dowen't cost you anything in energy. I would rather have 10 watts and a good antler setup like maybe a 4 element Yagi, armstrong rotated, than 100W and a mobile whip, even if power consumption were not an issue.

Having power output continuously variable over a wide range will help you out a lot. That way, if the other station is giving you 599, you can try reducing power. Or if you are fading, you can boost it for long enough to complete the QSO and sign off.

BTW, for single band use, the Scout probably isn't a bad option. You have to buy band modules for each band though, and the rig only ships with one. Buying all the band modules makes this budget rig cost as much as some basic all-banders.

Well, whose to say what is truly unneccesary? I have no interest in ATV,
VHF/UHF packet, or satellite operation, never have used them, and never will.
Why should I learn all that stuf about transponders, TNCs, and pixels? They are
unneccesary, I won't/don't use them, and my ignorance doesn't cause a safety
hazard or QRM to anyone (or does it?)

Funny,
You sit here in the internet moaning about the ARRL.

Well ,while you sit here online...the FCC is finding ways to take MORE of your ham bands. They figure you all don't use them all anyway.

Too busy on the net.

I can't wait for the ok to put a trunked biz system on 440mhz.

The same thing happened to my wife when she renewed her
ham license. The FCC spelled the name of our town wrong.

My wife called the FCC who then had her FAX a copy
of her license to them. She received a corrected license
a few weeks later.

2385. 500kHz Stations Closing

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-31 00:00:00 UTC
From: Robert Dixon <robert.dixon@zetnet.co.uk>
Message-ID: <19990131150744697 42@zetnet.co.uk>
Source record: 152009

500kHz STATION CLOSURES 31st January 1999
==========

At 0000 UTC 1st February 1999 500kHz ceases to be part of the international maritime distress and safety network.

Many stations operating on 500kHz have already closed down. Tonight will see more of them closing.

LISTEN FOR TONIGHT'S QSO PARTY ON 500kHz
==========

OSTEND RADIO/OST (Belgium) will close on 500kHz at 2300 UTC 31st January 1999.

REYKJAVIK RADIO/TFA (Iceland) will broadcast it's closing message at 0001 UTC 1st February 1999 and will thereafter take final QSO's with coast and ship stations.

Once completed, TFA will pass the frequency to LYNGBY RADIO/OXZ (Denmark) for it's close down broadcast and final QSO's.

Once completed, OXZ will pass the frequency to VALENTIA RADIO/EJK (Ireland) for it's close down broadcast and final QSO's.

CANADIAN STATIONS are also understood to be closing tonight, so listen also for signal on that side of the Atlantic - and perhaps QSO's "across the pond".

In GREENLAND, OXF is also understood to be closing but time and date have not been confirmed.

SPANISH STATIONS are understood to be closing at the end of February 1999.

SWEDISH STATIONS are to remain open until 2001.

Stations in the FAEROE ISLANDS, FINLAND, NORWAY and ITALY are also remaining on air indefinately.

>extra power consumption as possible. Thanks for any further information.

Don't just look at output power specs. Look at current draw on the primary
side. Since you're likely to receive for much longer periods than transmit,
pay attention to the current draw in receive. For example, the IC-706 draws
2 amps in receive, that's 27.6 watts. It draws nearly 20 amps peak on transmit
(about 36% *system* efficiency at 100 watts), but since you'll spend more
hours on receive, the total watt-hours of energy consumed may be greater
for receive than transmit.

(Note that when you throttle back the output power, the input power doesn't
reduce proportionately because of fixed parasitic power draws. For example,
if you drop output power to 5 watts on the IC-706, system input power draw
is still over 40 watts, for a system efficiency of 12.5%.)

Also, for SSB, you have to consider the duty cycle of the modulating
waveform. While the radio draws 20 amps on peaks, average draw
during transmit can be 4 to 8 times less since voice has a high peak
to average ratio. FM doesn't benefit from this, and CW doesn't benefit
as much from this, so a SSB rig may actually consume less watt-hours
while transmitting than will an FM or CW rig of similar peak power. And
since the information rate may be higher for speech, you may spend
less time transmitting a message too.

Unless there's a compelling reason to do so, I wouldn't restrict myself
to just QRP power levels. If emergency communications is a consideration,
then you're handicapping yourself unnecessarily. Look for a radio that
has a thermostatically controlled fan to avoid unnecessary parasitic energy
consumption, look for a radio where you can easily turn off energy wasters
like dial lights, look for a radio with CMOS control circuitry, etc. It should be
possible to get receive draw down into the few hundred milliwatt range fairly
easily (lower when squelched). (The IC-706 isn't a particularly good radio
in this respect, its receive energy consumption is high compared to several
of its competitors. But OTOH low receive power draw can mean poor front
end IMD performance since a high standing current is a proven way to maintain
linearity in the receiver stages. It's a tradeoff.)

Worry less about transmit power consumption since you won't be transmitting all the time. A good rule of thumb is the 90/10 rule which says you'll spend 90% of your time receiving or in standby, and 10% of your time transmitting. So don't be concerned about transmit power draw unless it is more than 10 times receive power draw. (Note that this doesn't apply to some amateur activities. If you're a contester, or a Dx station, or involved in heavy ragchewing, you may transmit as much or more than you receive. But for emergency use, the 90/10 rule is a good one because you won't transmit unless you absolutely have to, and you'll strive to keep your transmissions succinct and to the point.)

It should go without saying that you want to avoid tube equipment. The parasitic filament power draw will kill you from an energy conservation standpoint.

Depends. If CMOS is used, power consumption can be very low, and LCD displays
draw microwatts. Just look at a digital watch as an example. You want to be wary
of incandescent backlighting, LEDs, and other current wasters. They should be
activated by a momentary switch so that they don't consume current when they
are not needed.

>A
>homebrew project with careful attention to transmitter efficiency, using single

Dual duty oscillators don't save energy over a pair of switched oscillators.
They may just lower the parts count a bit. Varactor tuning requires regulated
voltage, and the regulators consume energy. Mechanical variable capacitors
use no extra energy. Use of high efficiency headphones can be a big help, the
audio output stage of a receiver can be a large contributor to energy consumption.
But the radio has to be designed to take advantage of that, IE a radio with both
speaker and headphone drive may use a high idling current in the audio amplifier
to allow it to remain linear when driving a speaker, and that won't be reduced
when driving high efficiency headphones. To get a real energy savings from
headphones, any high power audio amplifier stages should be able to be turned
off when not needed to drive a speaker.

There are also good reasons to want high standing currents (bias currents)
in other receiver stages. That reduces IMD due to strong signals by avoiding
bias point wander under the influence of the strong signals. This is an area
where intelligent tradeoffs have to be made. If you go too much on the micropower
side, you may have a receiver that's virtually useless in the presence of strong
signals.

>If saving 300 or 400 milliamps is not an issue, might I suggest simply opening

As I noted for the IC-706, turning down the output doesn't make all that much difference compared to the fixed parasitic power consumption of the radio. All that really happens is that total system efficiency decreases. A radio has to be designed for low power consumption to take full advanage of running lower output power.

>Output power is a funny thing... in theory, there isn't much difference between

Absolutely. When you're near the noise floor, it doesn't take much to go from uncopyable to solid copy. Only when you're operating several S units above the noise floor does a power change make little noticable difference to copy.

>Since you are concerned with getting the most bang for your buck, energy-wise,

Yep, I agree. It is never a disadvantage to have a good antenna. But throttling your radio back to 10 watts may not save you all that much in terms of total energy consumption.

>Having power output continuously variable over a wide range will help you out
>a lot. That way, if the other station is giving you 599, you can try reducing
>power. Or if you are fading, you can boost it for long enough to complete the
>QSO and sign off.

Yeah, but that's probably not worth much in terms of energy consumption. The radio is still designed for the higher power, and parasitic power consumption will still be a major component of energy use. For example, in the original IC-706, no matter the power level, the fan comes on in high speed during transmit, and that costs you 16 watts whether you need it or not. PA bias current doesn't reduce either.

>BTW, for single band use, the Scout probably isn't a bad option. You have to
>buy band modules for each band though, and the rig only ships with one. Buying

>all-banders.

I agree. The Scout is no bargain once you total up all the extras you have to buy to make it equivalent to even a basic full feature rig.

Don't flex your wrist or fingers, key with your arm muscles. This will
avoid CTS. Or go to a sideswiper and "roll" your wrist from side to side
rather than flexing it.

2393. Radio Officers out there?

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-01 00:00:00 UTC
From: Bill Tyner <styner@budget.net>
Message-ID: <01be4d97$50d52920$281b98d0@default>
Source record: 151818

I wonder, what the opinions are of the typical seagoing radio officer concerning the switch to satellite communications (by law) tomorrow? As I heard the news broadcast, CW will no longer have to be monitored by ships at sea. I have a hunch that the switch more or less dooms one more person who used to man the radio room. Is it a good thing to have no one in the radio room of an 1100 foot cargo ship? Seems vaguely disquieting to me but maybe the satellites are completely reliable now. I'll wager that ships will still have transcievers though, even if it's the personal property of the radioman!

I hate to say this, but MOST everyday people are probably not going to tell the difference at first glance, and many don't know what it means anyway. I know plenty of people who would say "ooh look, that's one of those family radio walkie-talkie things" and buy it no questions asked.

Sometimes hams take for granted their peers technical knowledge....

Dear Sir,

I'm new to this newsgroup, and was probably taken out of context. The only reason for my correction was I thought it was funny that the poster talked about the importance of CW and then got some wrong. (I did in fact notice that w/o looking it up - I'm going for my 1A in 2 weeks.) I'm hoping to pass so that I can get on the HF bands, but my original interest in the code was not for that reason. During the summer time I used to try to see how far I could talk on FM 2m. Scanning around the band I would hear a repeater and be able to key it up, but noone would be on and I would hear the repeater ID (usually in CW). Realizing that I had no idea where this repeater was, I decided to learn the code. Since then I have been at college and find little time to go on the air, but am trying to increase my on-the-air time,operating skills, and learn CW to get the Tech Plus license.

Though I am a "No-Code Tech" and very proud of it, I am also a supporter of the continuation of a 5wpm code test for the HF bands. I haven't made a decision as to the worth of higher speed tests, but I do think it is important that a ham atleast have a knowledge of the code.

As an example as to how important the code can be, and what a "No-Code Tech" with a little knowledge of it can accomplish, I'd like to share with you what I heard today.

dahdidit dit didahdit dadadadadah dadah didit didahdit (145.985 MHz)

Now, a ham with no knowledge of the code whatsoever scanning around the 2m band could have passed this up without a second thought - having no idea what s/he missed. I was thrilled to hear this and even recorded it on the next pass.

Well, it's getting late and I have class early tomorrow. Good night gentleman.

73,
Chris Roberts

Another alternative might be to pick up an Argonaut 509 with the outboard 50 W linear. I use the least pwr necessary and this modest rig will run off of a couple of deep cycle batteries. I saw one in the "boneyard" price guide for cheap. If you can find one that's in good condx it's worth it IMO. I'm in Ore. and have worked 10 countries on under a watt. My other suggestion is that if you do run low power, make sure you get up the best antenna you can. I've found it quite a thrill to "break in" on a pile-up running a QRP rig.

I am simply against "dumbing down" any part of it in order to attract
more people to the hobby. To me, removing or lowering the code
requirement is a dilution of the standards.

Oh please! How does removing code requirements dilute knowledge of radio
theory? BTW, what's the growth rate of amateur radio as a hobby? If
your're not getting a large rise in new members relinquish some of the
band width to commercial interests and the public at large that need
that need them.
---
ensure that it remains a historical link with the past. In my
view, it would be a shame if CW skills were to disappear for good in
the coming decades, since that would be like the loss of a
culturally-specific language. Code testing helps to preserve this
important radio legacy.

So why not offer courses in CW for those that are interested in radio's
historical roots? Perhaps Latin and Greek should be made part of a
medical student's curriculum in order to understand the etymology of all
these foreign words. These languages are not very relevant in the 21st
century but certainly have historical interest.

I fear that in another 10 years, people won't know what AM/Tube/Mono radios are.
Nor will it matter!!!

I also know that there is still a legitimate need for CW. When I was in the Air FOrce, I was required to learn 10wpm for two reasons: 1) to assure the proper operation of navigational becons. Becons still use it. 2) to assure access to the National Defense Emergency Plan. Cw is still recognized in the military as a viable "back-up".

The military has a legitimate need for CW but that has nothing to do with amateur radio as a hobby. There aren't many hams who are entrusted with the proper operation of NDBs or national defense.

This hobby needs to enter the 21st century.

Mario, I agree with the other poster on the superiority of ground strap over wire for an RF ground. But if you have problems aquirin it, you might try soft copper refrigeration tubing, the kind sold in rolls. The hardware store should have it up to 5/8" or so, and this will be maybe not as good as regular copper strap, but still better than 12 ga copper wire.

the worst case usually involves a 1/4 wave run from equipment to ground, or a multiple of 1/4 wave. in this situation, you may actually be better off with a longer run to ground. Often, with an oldfashioned all metal key and 50 or 100 watts, you will experience "key bite" when things are really bad. and this tells you your ground system is really really wrong, at least on that frequency.

As for relying on the tuner to take care of grounding the rig, I usually do it that way myself. Should be okay with a short jumper between rig and tuner, and reasonable size coax... RG-8 or better.

2407. GMDSS Trainer

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-01 00:00:00 UTC
From: hamilton2570@my-dejanews.com
Message-ID: <793ufviqo1@nnrp1.dejanews.com>
Source record: 151832
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc,rec.radio.amateur.pol

This software is used to
provide the user with information related to Global Maritime
Distress and Safety System;
help him acquire skills of usage of radio communications equipment
used within GMDSS.
All data provided by the software fall into the following categories :

text;
pictures;
short video films;
short audio pieces (both speech and music);
binary databases (tables);
executables each simulating a certain radio equipment.
All these pieces of data are cross-referenced in a multiway
chierarchial-tree global structure. In effect, they form a hypertext
system, one of its well-known advantage
being the ability of the user move within a "layer" of data
corresponding to his current level of proficiency; but if necessary, he
may "descend" to the very basics of any
issue, e.g. to a physical definition of oscillations.
All the above components of the database are easily added and
modified; it does not require recompiling of the software (except
executables).
The total size of the database is limited only by free disk space.
The program is installed on a local area network, each station
representing a ship, coast radio or shore-based subscriber station and
it can work as a standalone
workstation.
The program simulates work of radio communications equipment,
including sending/receiving messages and voice to/from ships. The voice
communications are implemented with a Sound Blaster audio card installed
on each computer.
Three different types of workstations are available : shipborne, coast
radio and subscriber stations. The latter two simulate an exit to
shore-based communication networks.
In a sense, this program is self-documented and almost all data
presented in this manual is easily reached right from the program.
The program is released in two versions : full version for local area
networks (LAN version) and standalone version for onboard training.

Hi, Bill:
I was saddened to hear this news. However, we all knew it was coming, some day. I saw the "handwriting on the wall" and made a career switch in 1976.

I spent about 13 years monitoring 500 KHz. Four years was at sea with the US Coast Guard in the Pacific and the Gulf of Mexico. The rest was as a coastal operator at KLC.

CW Telegrapher could be the most frustrating, yet most rewarding job in the world. Helping folks with information or emergency assistance gave me a great feeling. I shall always cherish that part of my life! And the close brotherhood of telegraphers was wonderful. Other than the occasional insult (DAH DAH DITTY DAH DAH), these were some great operators!*

Paul K5PF
KLC, NOY, NBYG, NUZY, 4YV (Ocean Station Victor)

*A comma, sent VERY SLOWLY, was the commercial version of "You are a LID" (with implications about one's parentage). It was used with caution because it easily could provoke a fight! <grin>

Yup. And, if code testing is eliminated, then by definition it isn't
necessary.

BUT, if the FCC maintains some form of code testing, then it MUST be,
according to Cecil, necessary.

2417. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <794g17$ddc@news.Hawaii.Edu>
Source record: 151842
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Yeah, I know..seems funny but it's clumsy to convert CW to
sounds in writing, and it's easy to err.

> (I did in fact notice
> that w/o looking it up - I'm going for my 1A in 2 weeks.) I'm hoping to pass

You'd think that most people who use repeaters would, but
you don't have to read here very long to understand that is
not the case.

>Since then I have been at college and find little

I don't understand your comment. I view Pine on a Wyse 30, but Pine is
relatively new. Before Pine was MM and Mail, but even those mailers were
in use in the early 90s. (Yes, there is a VT-52 terminal still in the
office).

>FCC be that strict?
>
You probably don't have to worry, but you can ask the FCC on their web
site. I think the answer will be as long as you can receive mail at that
address they are satisfied. If something is returned to the FCC as
undeliverable, then there would be a problem.
>
>Anyway.. I just thought of a reason for getting it changed, even if it's
>"ok" by the FCC.. When people search for other amateurs in their area, *I*
>wont be listed.. GRR...
>
This won't be a problem. When people do a search of hams in their area,
they do it using the ZIP code. Since the ZIP code is correct, you will
be listed.

I just got my second class ticket a couple of years ago, with ship's radar, GMDSS op and maintainer, gen phone, all that stuff, and my USCG license a few weeks later. I was too late to get into the job market, and have been sailing as AB and Bosun, and occasionally on my limited Master's ticket.

Too bad about 500. Not saying it is in any way "better" than INMARSAT or HF SITOR, but it is one more resource that is available when all else fails. It is not very smart to put all your eggs in one basket. The GMDSS system, for all it's high tech (well, it would have been high tech 20 years ago) whiz-bangery is not perfect. NO single communications system can perfectly address all needs all the time, even when it is operating as designed.

The thoughtful approach to emergency communications is similar to prudent navigation: NEVER rely on one single resource, and always, if possible, make use of a variety of resources.

I agree with Paul that there is a sort of kinship between commercial Morse ops... I remember the first time our R/O let me send the AMVER. I don't remember who I worked... maybe it was WCC, and that wasn't on 500, but on HF. Anyway, I guess I was a bit shaky, even though I had been hamming a couple of years before getting my commercial ticket. I finished up, after countless fills, and our RO broke in with "TNX UR PATIENCE OM NEW OP HR" and that started

a short but for me, very exciting ragchew.... on 12 Megs!

I wonder what it is about Morse Code that brings out the best in operators, both amateur and commercial... In all my many hundreds, maybe thousands of hours of listening, I have never heard one word of profanity, nor any deliberate insults, nor anything I could even call rude, except from some DXers scrambling for a contact. I never heard the dreaded MIM (I don't know how to make the overline come out) on 500, though of course Paul has spent a hell of a lot more time listening there.

I wish I could have sailed on my ticket before the end, but the era has passed. Hardly any jobs for ROs except on pre-po, MSC, cruise ships, etc, none of which I want to sail in, and those jobs are sewed up tight anyway. There will still be a need for a highly skilled operator/technician aboard ships, but that need will henceforth go ignored and unfulfilled. Tough, I guess. Think I'll go get another beer.

2426. Re: GMDSS Trainer

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-01 00:00:00 UTC
From: rcr3316373@aol.comNojunk
Message-ID: <19990201143726.26739.00002681@ng121.aol.com>
Source record: 151851

A 70 hour approved course is now required to meet STCW requirements. The GMDSS Operator License alone is no longer sufficient for the required primary and secondary operators.

Every company that I know about uses Mates and the Master for the reqired ops. Before anybody thinks they will study on their own, get their GMDSS op ticket, and "apply" for a job, give yourself a reality check.

On the other hand, small boat operators expecially yachtsmen who are not required to be GMDSS compliant nor STCW compliant, would probably benefit greatly from this course, especially if they commonly sail offshore. Having suitable and properly set up modern VHF and HF communications gear, and knowing the ins and outs of DSC, distress protocols, etc will do much to improve safety, and being able to practice at a virtual operating station is much better than just memorizing a question pool. New GMDSS compliant VHF rigs cost only a little more than non compliant sets, and in most vessels are definitely worth the money, IF the operator knows how to take advantage of GMDSS advanced safety features. This software sounds like it meets a real need.

I didn't see a price in the post...?

2427. NEW MOTO 1/2 wave 800 DUCKIES $5 EA!!

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-01 00:00:00 UTC
From: dcat4955@bellsouth.net
Message-ID: <79574u$jf0$1@nnrp1.dejanews.com>
Source record: 151852

NEW IN BOX MOTOROLA 800 MEG 1/2 WAVE DUCKIES. these are similar in design to 440 whips, they are not the "side stabbers" that came with stx rigs. these are leftover NOS from the first nextel system. they are "red dot" 800 meg, sma conector on bottom and "ball" tip on end. work fine for 800 public service freqs. aprox 6" long $5 ea. shpng is $3.50 for 1-10 antennas. robert ke4mcl

Emergency communication is probably the reason we are all in the Amateur Radio Service -- that is probably the #1 reason that the lawmakers who continue its existance continue its existance. The technical and hobbyist aspects of Amateur Radio don't have nearly the impact on Congress as what happens when the hurricane knocks down every phone line in town.

2430. SOS Signs Off

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-01 00:00:00 UTC
From: mf_luder@my-dejanews.com
Message-ID: <795bjq$ms8$1@nnrp1.dejanews.com>
Source record: 151855
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

US stations, and others as you know, stopped the 500 kHz SOS watch at 0000z 1 February.

CBS News carried an Osgood file on the end of SOS's use last night.

This raises the question, is it now OK to send SOS on ham bands for other than a life or death emergency, as legally, it's meaningless ?

Actually, it is a fact that Morse code skill is necessary for legal operation
for hams on HF at the present time. We are simply trying to get the FCC to
change its collectivist mind and depart from statism for a change.

I was just diagnosed with CTS last week and I have to see a specialist this week so will see what happens. Chris sent me some great advice through personal mail and I sure appreciate the input. For those who really need to use a mouse, I just found a great product this afternoon and already it seems to be helping. It is a mouse pad made by BELKIN and it is called the "Premiere Ergo Pad" it is specifically designed for combating CTS problems. 9.95 at the Hyannis Staples.

In the good old days one could
find small differential trimmer caps.
Simply a matter of adding two fixed
caps, a NPO ceramic to one leg, a
Negative coefficient ceramic
cap on the other. The differential allowed
drift compensation without affecting the
oscillator frequency.

2438. FT-50 Mod Revisited

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-01 00:00:00 UTC
From: lyons1101@aol.com
Message-ID: <19990201184242.09540.00003544@ng-cg1.aol.com>
Source record: 151863

I bought and did the mods to make my FT-50 (with a serial # starting 6L120) a year ago. It went out of band fine. I then traded it away after a couple of months (dumb move!). I erased the software and RDF files thinking I would never need them.

Today I got the original FT-50 back in trade! The person that had it probably pushed and pressed every combination of buttons. It wouldn't go out of band anymore. I tried the original "hold the knob, PTT and lamp" process but didn't get the BAND XXXX message. The radio will except the "Hold the knob and lamp key" mod for CAP\Mars. But the TX from 120 to 220 and 350 to 505 doesn't work anymore. I have the original ADMS disk and loaded it back on the computer. I tried the other mod that calls for pulling out the cable half way through... Still no-workey!

Any suggestions?

2439. K1MAN NAILS Pork Butt!

You will get a lot of different opinions, but this does not sound too dificult a situation. There are some exotic RF ground tuners and such to help out with problems, but first just try a 6 or 8 gauge solid copper wire run to a 8 deep foot copper clad ground rod. That should get your on the air safely. If you don't get any rf bites, probably from the tuner if it does happen, then all is well. If you do, then write back for more info.

> US stations, and others as you know, stopped the 500 kHz SOS watch at 0000z 1
> February.

US Public Coast Stations have been exempt from standing watch
on 500 kHz for several years now under a special temporary
authority. The US Coast Guard stopped all CW watch several
years ago. In a celebrated case about two years ago here,
NMC (USCG COMSTAPAC San Francisco - actually at Point
Reyes, CA - actually called up KPH (also at Point Reyes) and
asked then to come up on 500 kHz when NMC was notified that
some emergency traffic was being heard on 500 kHz.

The 500 kHz watch by human or by auto-alarm was still required
for ships until today.

> This raises the question, is it now OK to send SOS on ham bands for other
> than a life or death emergency, as legally, it's meaningless ?
>
No, because it is not "meaningless", just that ships are no
longer required to stand watch and send emergency traffic by CW
on 500 kHz. "SOS" sent as a sibgle character is still the
international CW distress signal.

The requirements for what equipment must be carried and what
sort of watchstanding must be kept are found in the
International Convention for Safety of Life at Sea (SOLAS),
while the rules which define "SOS", "TTT" "XXX" and their voice
equivalents and specify when and how they are used and what
degree of protection other stations must give those signals
are in the International Radio Regulations (RR). Two different
treaties promulgated by two different organizations.

Theoretically a ship can still carry MF CW equipment (and the
code-qualified radiotelegraph operator to operate it) and make
a distress call on 500 kHz as long as it carries the GMDSS
equipment with the attendant qualified operator/maintainer,
maintains the required 24/7 GMDSS watch, and carries the
required Safety Radio Certificate (or whatever it's called
nowadays).

Whether there will be anyone to hear signals on 500 kHz and do
something about it is something else.

There is no rule that says that all distress traffic MUST be sent on GMDSS (or sent at all on any frequency, for that matter). Of course if I was the shipowner who had to buy all that GMDSS gear, or better yet, the vessel insurer who would have to pay out big bucks in case of a distress gone sour, I would have a stroke if some CW freak insisted on using 500 kHz rather than GMDSS.

"Fair Winds and Bon Voyage" as KPH said in its sign-off.....

Since you mentioned it, I think that it would probably be a good idea to include Ancient Greek and Latin as part of a medical education. Sometimes it is necessary to implement a few minor barriers in order to retain important legacies that connect future generations with their roots. The radio culture evolved from raspy Morse code experiments, and we should never forget that. The essence of radio communication is represented by this simple yet immortal mode. Let's not let future generations of amateurs lose this important link with their technical forefathers because of convenience or political expediency.

:>
:> Finally, the last official use of that throwback to the past, CW, has as
of
:> today officially been discontinued by the maritime community. Seems the
:> only remaining users of this dinosaur is those hams who refuse to give up
:> this once important but now archaic waste of bandspread.
:
:Alan I'm happy to see that you are happy that code is dead. I truly
:think that yes it is a old form of communication but a trusty one too. I
:also would like to all HAMs learn this art. I do belive that we are
:depending to much on technology. Amateur radio operators are supposed to
:be able to communicate when all is gone. I honestly beleive that we need
:to have some terrible thing happen here to open our eyes to what we are
:about to do by allowing this art to die. Its still a important reliable
:form of communications. I think that it is our best interest to keep it
:alive. It may be the only form of communications left after the big one.
:I hear more and more people say oh no that can never happen BUT they
:said that Titanic was unsinkable and look what happened. After WWII they
:said the dogfight in the air was dead a thing of the past and Korea and
:Veitnam proved that wrong. I think that CW still should be a requirment
:for getting your ham ticket. We are supposed to be communicators, with
:CW one can communicate with two live wires.Has anyone heard of a spark
:gap transmiter or even remember? We as amateur radio operators are
:supposed to be a pool of trained communicators and CW is a important
:part of that training. I think we would be in great danger if we lost
:this art completely.
: Now after saying all that before I could copy and send code I thought
:that losing code would be the best for all. But after taking the time
:and effort to learn CW i'm truly glad I did. It can be a fun form of
:communicating. Thats just my opinion I could be wrong.
: 73 from Oris
: N3CND

Our whole society is very dependant on technology. But being
a romantic isn't going to bring back the past. TCP/IP is the
"code" of the future. It does now what Morse did in its time, bind
us together.

>received no response.
>
> --- David, KF6UMY

If you travel often, I suggest a HF mobile. No repeater required, no matter what your location. You can always find someone to break in on with your emergency traffic. Most hams will spring for the long distance calls in an emergency.

Unlike years ago, the modern HF mobile takes up little room and the antenna can be as simple as a Hamstick on a trunk lip mount. For example, I regularly work a trucker who mounts his antenna on his side mirror (temporary CB mount) on 40 meters using an IC706. He uses a different truck every trip and says he can hook up the rig, antenna mounting included, in 5 minutes.

2456. Re: Dont Discredit Tech's Because of CW!

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-01 00:00:00 UTC

Source record: 151881

As much as I love CW, and as much as I think it is valuable to know (at 5wpm), I would never degrade a Technician (unless they act like a CBer on the air). Many technicians know TONS more about the technical aspects of radio and electronics than I do.
Here is my philosophy on the debate: We are all family. There ARE jerks in every hobby including ham and this fact is not dependent on the license class. I love ham. I have many other hobbies and pursuits and I don't live by the radio. I think code is a valuable tool that everyone should TRY to learn. I do not see any reason for 13-20WPM code tests in order to access the higher class bands. 5WPM is sufficient...the theory is more important than the code.

2459. Re: Why hamshacks?

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-01 00:00:00 UTC
From: Gary Hoffman <hoffman@carcs3.wustl.edu>
Message-ID: <36B5C831.41C6@carcs3.wustl.edu>
Source record: 151884

A separate "ham shack" was certainly a necessity in the
early days for safety if for no other reason. I think today
the "shack" may actually be a room or a corner of the basement
or attic, rather than a literal separate building. Those still
using actual shacks/sheds/garages probably do so for a variety
of reasons, including -
(1) Not to disrupt the esthetics of the main house.
(2) Peace and quiet, both in the shack and in the house.
(3) It's easier to make a shack "off limits" than to do the
same with a room.

No doubt there are numerous other reasons.

A similar problem was solved in New York City, recently. Taxi drivers were using "export" radios which are really 10 meter rigs with the capability of going from 26 to 30 MHz. They set up shop in the 10 meter band and were shut down by a joint action of the FCC and the city licensing authority.

No such solution is available for the South American stations. The government does not care. Amateurs in South America are distessed over the situation but there is no relief in sight. Folks in those countries fear their governments and prefer to keep a low profile. There is a concern that complaints would create a backlash in their governments against Amateur operations.

So far, the best solution has been to keep a steady presence of Amateur operations, especially on the frequencies ending in "5". The most popular intruder channels are 28.005, 28.015, 28.025, 20.038 and 28.045. For a while, truckers in the United States adopted 28.085 as a working frequency to get away from QRM on Channel 19. An education program aimed at trucking companies and drivers has been successful in greatly reducing the amount of illegal traffic on 28.085, although some AM operation occurs there, occasionally.

We gratefully acknowledge the large number of over-the-road truck drivers who hold ham licenses and who assisted in clearing 28.085 through articles in trucker magazines, letters to CEO's, and posting friendly reminders to fellow drivers via truck stop bulletin boards nationwide.

K5PF
Sign at a Truck Stop on Interstate 40 in North Carolina, beside a stack of Ranger RCI-2970's:
"World's Most Powerful CB Radio."

(P.S. One polite, informational telephone call to the legal department of this truck stop chain and the sign disappeared within two hours).

>that we can copy it at much higher speeds. I personally can do 200 wpm.

While I don't believe that a human is capable of copying ASCII at
200 wpm by ear, it's far easier to build/program a machine to do
it than to program the "wetware" to decode Morse at 20 wpm ...

Also, if the ASCII was slowed down to 20 wpm and sent as FSK
it would be just as feasible for some (but not all) humans to copy
it by ear is it is to copy Morse by ear ... it would take a similar
learning curve, which is highly dependent on which person you
are considering ... "easy" for some ... impossible for others.

However, that is still TOTALLY irrelevant WRT any "necessity"
for mandatory Morse tests (or ASCII tests, either ...)

Alan,

Don't get ur panties in a wad just yet. CW will remain a part of ham radio
HF for a long time to come. And why is that? Because WE WANT IT.

CW has no more chance of dying out than fencing has. Who would
go into modern warfare today equipped only with a sword?

And its we hans who will keep CW alive for its own sake...just
no need to REQUIRE it by the governments of the world.

> > Then what

It's the yo-yos on PHONE (SSB and/or FM and/or whatever's
next) who will cause the FCC to take a second look as to the
advisability of continuing ham radio, not the CW ops.

If I recall correctly, in one episode "The Professor" built a ham radio set from a coconut and some metal taken from Mrs. Howells ("Lovey") corset.

Don't worry about these people that can't see beyond the end of their noses.
When the "revolution" comes, CW will be alive and well. The militia will
need to communicate. We will all use bug's and put a sailor swing on it.
No "code reader" will handle that.

IT TAKES TWO THINGS TO COMMUNICATE...AN OPERATOR AT BOTH ENDS.

I just finished a CQ on 20 meter SSB, and was answered by a "low coder",
he told me my voice sounded funny and he started calling CQ right on MY
frequency.

I used to be a pro sidebander. Now Im 180 degrees shifted to a cw only op.

See the stupidity in the logic???

Let me apologize for the idiot you ran into. Give me a call after I CQ on
CW and I ALWAYS QRS to the speed you are sending. Having to show off and
send faster than the other fella can copy is egotistic and ignorant.

You are right there, Phil. I hope nobody thinks I am painting all fone operators with the same brush, because there are indeed many, many good ops who would never use anything but the most responsible and courteous operating practices, but where does 99% of all the deliberately rude or inconsiderate operating occur? Where is the most malicious interference, the most name-calling, slander, and profanity occur? The fone bands, that's where, both above and below 30 Mc. Tell me it ain't so, somebody. That's the main reason I am a CW and RTTY op.

The amateurs were the first users of code over the radio, and now
we're the last. A fitting tribute to amateur radio! That's prompted
me to send off a letter to the ITU asking that knowledge of code
be retained for access to HF worldwide so as to insure a pool of
operators continue to have the ability to use the simplest mode of
radio communications.

Would you like me to send off a copy of the letter in your name, Alan?

Could it be that these people see a service deeply rooted in the past resistant to change and requiring as a rite of passage that they learn a mode of operation most of them thought went out with their Great grandparents. Its is hard to instill wonder in kids, who use to the internet, cellar and sattelite phones real time video and audio communications, portable computers and other new technology to communicate with each 0ther today. When all we do is try and sell or convince them that they need to learn a 150 year old mode of communications in order to prove that they are worthy of having any privileges on our bands. Regardless of what you think Dick I dare say not many people who are now choosing to join our ranks do so out of love for CW or our past accomplishments.

There are even more very intelligent and knowledgeable unlicensed
citizens out there - let's let them all on HF! (BTW, M/HF consists
of only 3.75 MHz, with a smaller portion of that usable at any one
time; we don't want nor need 600 kilohams down there.)

Nice troll, Doug. Let's see what your reading is on the Hans Scale:

In a message dated 99-02-01 12:00:51 EST, Burt Fisher whined:

>Why is a ham plate different than a "PERSONALIZED" plate?
> Why shold hams pay less to advertize their HOBBY?

Chew on this, Burt: In the State of Hawaii, any amateur is entitled
to receive, free of any fee, a callsign license plate. That's mandated
by state law.

Yes, PINE is relatively new, but it doesn't eat nearly the system resources that IE4 does. *THAT* was my point. If the age of the tool were in question, I think some of these CW folks might also be harassing others about how old their keys were.

Under any rational intrepatation of the ARRL survey code is
not important. There is only one survey, there is no NocCode version
of it. According to that suvey 72% of those that replied to places
their own personal use of Morse Code in catagories of answer that
indicate it is not important to their operations.

As to this being the Amateur radio service I could not agree
more whole hartedly. It is also a hobby you you nor the goverment has
any busniess telling to me that I must particpate in a program to
preserve a moribund commincation mode in order to "advance the radio
art , promote international good will or servse in and emergency"
which are the puropses of the ARS. If this the Ancent Radio service
then maybe you would have a point

Name then just how some bomb throwing maniac can render all
mike etc useless and still leave Morse coode for use, and there still
be an infrastructure able to do anything with those messages even if
they get through.

Accepting for the moment that we have been hit by that near
gobal killer, and that CW is still on the air. Just who and what is
be able to do something helpfull with that message. At worst if we
still need morse morse was sent and recieved by machine long before
spark gap without anything like our present technolgy, with out radio
itself. Enough of our computers will survive long enough to go back
to that and simply learn again if we need it that bad

Indeed what ham would reconize all the morse that he needs to
reconize by by ear SOS. that would tell him that this was important
and to keep listening and tune his coompter aids on , or call somebody
that knows Morse aor just take it down by dits and dahs and translate
by hand.

>all for communications modes that make communicating better the only
>thing that I'm afraid of is the art of CW forever being lost all it

Rick,

In a way, the FAA does require pilot currency in fundamental and historically significant skills. Pilots must demonstrate the use of VOR and NDB approaches and navigation, even though GPS and inertial guidance systems are the usual methods of enroute navigation and ILS is the most common IFR landing system. The reason for this requirement is that sometimes one must rely on basic systems and skills when more sophisticated techniques are unavailable. As a side benefit, the skills needed for NDB navigation have been preserved long after "better" systems were implemented.

It's great to see how the almighty coders get together and trash you when you disagree with their position. You people do nothing but prove Burt's point about most hams. THANKS FOR YOUR COURTESY. I NEVER SAID ONE BAD THING ABOUT ANYONE PERSONALLY AND ALL YOU JERKS DO IS INSULT ME. Thanks so much for your maturity. And no it's not the one incident that changed my mind although that's what you idiots read into it because that made eaasier ammo for you. Never did anyone defend code..all you did was trash me...not a very effective argument.
Hey Burt Fisher....looks like you were right. To the one person who responded intelligently...thanks. To all the rest, get a life; I'm not impressed.
Burt, you need to add "arrogance" and "stupidity" (for those assuming this one incident changed my mind, which was never said or implied) to your list.
Don't flame the messenger..but code should no longer be a barrier to operation on the PHONE bands. So sorry you people feel so threatened.

Let's hear it for no code ticket. 15 years of morse code experience in the service.

End of Road for Morse Code's Dots and Dashes

Reuters
01-FEB-99
LONDON, Feb 1 (Reuters) - Morse Code, which spelt out the demise of the Titanic and the end of two World Wars, on Monday fell victim to the relentless march of technology.
For those in peril on the sea, three dots, three dashes and three dots once
spelt out SOS -- the universally recognized call sign for a ship in distress.
Now Morse is being replaced by a satellite-based "Mayday" system on all ships over 300 tonnes which have to carry satellite and radio equipment for
sending and receiving distress alerts.
"Morse is a system that has played an incalculable part in the development
of trade and history itself -- but it has now died of old age," said Roger
Cohn of the International Maritime Organization.
It was invented in 1832 -- appropriately enough on a Transatlantic sea crossing -- by Massachusetts portrait painter Samuel Morse.
His system, the 19th century precursor of the Internet, was hailed in its
heyday as "the instantaneous highway of thought."
By the time of his death in 1872, the world boasted 650,000 miles (one million km) of telegraph lines on land and 30,000 miles of submarine cable.
With Marconi's invention of the wireless, Morse Code was given a new lease
of life. In 1899, the first shipwreck was reported by Morse Code in the English Channel.
By 1910, Morse had even trapped its first murderer when the notorious British killer Dr Crippen was trapped. A message was tapped out to the liner Montrose on which he was trying to escape to Canada with his mistress.
Tragedy struck in 1912 when the fateful message "SOS. Come at once. We have
struck berg" was tapped out by the Titanic.
Hundreds of lives could have been saved by the liner California, just miles
away. But its radio operator was not on duty and never heard the

message.
>From then on, all ships maintained a 24-hour radio watch.
The radio telegraph station in Isahaya, Japan closed on Sunday after more
than 90 years of operation.
And Scottish coastguards, who picked up a Morse Code message from a listing
cargo ship last month, confessed they were so surprised that they thought
it was a joke.
The London Times, reflecting nostalgically on the 19th century answer to

e-mail, said in an editorial on Monday: "Morse broadcast the ceasefires of
both World Wars.
"It was used by generals and spies, speculators, journalists and prisoners
communicating with the next cell."
And then it concluded sadly..."Over and Out."

Waste? 50 Hz is a waste?

BIIIIG waste.

Uh huh.

The reasons that MANUAL Morse Code is no longer used commercially:

1) It's unreliable to have a human do what a computer can
2) It's more expensive to pay someone a year's salary than
it is to purchase said computer equipment
3) It's expensive to train people, who might leave, meaning you'll
have to train NEW people
4) Digital modes often use error correction, while humans use
their somewhat less effective error correction routines

HOWEVER, it's as reliable as it was 25, 50, or 100 years ago.

WE as amateurs do not need to meet the business case because
WE don't get paid to do what we do. The mode still works, and
I dare doubters to decode TCP/IP packets in their heads.

Sorry, but trying to make a point by trying to make ham radio
fit a business case just doesn't work because NO business case
can apply.

I suppose I'll take comfort in the fact that I've managed to
help a friend, a tech for 6 years, to "discover" code. He
found it very difficult, but made it through 5 wpm, and eventually
through 13 wpm...and he's just had

"THE BREAKTHROUGH"

From about 10 wpm to 20 wpm in about one day. Something just
suddenly clicked on and it became "different."

I'm personally very proud of him and his success.

And yes, he's in the under-30 crowd.

So, if you're up for a good challenge, one awaits...

I guess you don't have South Park, Stern, Family Guy, etc. on TV or Radio in your area and that no one listens to popular music on the radio these days.

There is the local radio station that calls around to hardware stores in the evening to ask about "calk"...

I was in the same position, a car fire and no one to get the call.
Fortunately, I had an extinguisher and passing motorists used the "800 MHz"
public switched network (I can't bring myself to type "cellph___") to help
this motorist. I had the same helpless feeling and I had 2m, 440 MHz and
GMRS! No repeater action (I was out of town and used the ARRL pocket
directory) and no REACT on 462/467.675 PL141.3 GMRS.
I've seen a plan to use 147.42 as a Georgia statewide disaster 2m simplex
since it's "matched" to Red Cross 47.42 MHz 6m frequency. I'm almost sure no
one would hear me on that frequency but the only way you're going to get
people to monitor 147.42 is if it's not used frequently like 146.52.
Good luck with a monitoring plan for your area.

I agree 100%. I certainly don't agree with some of the things that King Hussein has done or believes in, but I sent him a QSL card wishing him a speedy recovery anyway. Opposing beliefs are not a reason to wish an illness like that on anyone. Of course, many of the folks on *this* NG probably won't understand that...

While I am sorry to hear that the king is sick, I also remember that he buddied up to Sadaam during the Gulf war, when we were kicking Iraq's ass. Maybe this was just because he didn't want Jordan to get hit with a SCUD missle if he went against him, I don't know. Just something to think about before you go trusting Jordan with too much.

Dan, uhm. Have you ever had carpal tunnel? If not, you don't know how painful it is at all. Many times even using a sideswiper or paddle is extremely painful due to the repetitive movement, even when the movement is limited. Yes, it's not as bad, but makes for a valid reason for having problems learning the code. As we all know, sending code helps considerably with learning it.

I have carpal tunnel and when it flares up, it is extremely painful. Many times I can barely hold things in my right hand... and we're not talking heavy objects either. I've had pens that would cause the pain to flare up by just holding it.

My solution is to key using a paddle and my left hand. Not only does this keep me from hurting my right one repetitively, it also allows me to write in my log with my right hand.

oris, I'm happy that you're happy that Alan is happy. I've chimed in on some of the code war threads, taking the side of the no-coders. But as I've slogged through the posts, I now realize I've mostly had a knee-jerk reaction to the generally backward attitudes of the more rabid pro-coders.

In a previous post, I went off on a fake rant using liberal buzzwords I knew would piss off the pro-code 'necks in this newsgroup. Now here's another one, this time for real: "inclusive." As a mode of human communication, "Morse-based" code is amazing. Just think, a way to communicate with a mere muscle twitch. Search the net and you will find more than one site concerning communication with disabled people using Morse code. (The URLs are not at the tip of my mouse, but they weren't hard to find on Alta Vista.) If that's not inclusive, well...

Not only is it an especially low-bandwidth mode, it is a mode where an extra processing step takes place in your head. That's the price you pay for the narrow bandwidth. (That and speed, especially in my case!) Narrow bandwidth does have its advantages, especially for weak signal work. I also concede that code is useful for communication between people who may not be fluent in a particular spoken language.

Some pro-coders have come in here with "lifeboat" arguments, as though Y2K or Something is going to render all microphones and keyboards useless, possibly even causing them to melt in our hands. That's not going to save code as a mode, any more than than code will save ham radio from the Children's Banders. Ham radio will survive as long as ham radio is indispensable. Useful is not good enough. Same goes for code licensing requirements. Prove it, or get out of the way.

Ed Hare, W1RFI wrote in message <36B61D02.477@arrl.net>...

>Emergency communication is probably the reason we are all in the Amateur
>Radio Service -- that is probably the #1 reason that the lawmakers who
>continue its existence continue its existence. The technical and
>hobbyist aspects of Amateur Radio don't have nearly the impact on
>Congress as what happens when the hurricane knocks down every phone line
>in town.

That certainly makes good sense to me, Ed.

How you can put forward the statement above and show such tolerance for the activities of "LandLine Lids" on the Packet Radio network is beyond me, though.

Here's what Greg Jones of TAPR has to say on the subject:

Greg Jones WD5IVD (President of TAPR, formerly of TPRS) from the 8-96 issue of the Texas Packet Radio Society's Quarterly Report:

Some might say that I have just made a pact with the 'Dark Side of the Force' by saying we should use wirelines and the Internet to connect regions in Texas, Arkansas, and Oklahoma and the U.S. at high-speed. My answer is no, we don't turn off the existing TexNet backbone, but use it for what it is good for, that of providing long-haul RF paths when our primary high-speed routes die.

Many might say that the commercial wirelines are unreliable; however, the commercial world is learning every time there is a disaster that takes their equipment off-line. Soon, many commercial systems will not be affected by earthquakes and other such natural disasters.

Greg appears to be of the opinion that no backup for the commercial communications carriers is needed by Hams or anyone else.

A "Real Ham", and an asset to the hobby, isn't he? ;-)

Don't you think it's about time the ARRL looked into this matter, Ed?

I know I'm not the only Ham who is damn sick and tired of watching the work of the last ten years+ go down the toilet due to clowns like Greg Jones promoting the utilization of Non-Ham means of communications by Hams in preference to Amateur Radio.

I would like to see the ARRL display a bit of leadership in this area, Ed. I know it's not easy, but I also know it needs to be done.

Nobody wants the ugly job of "taking out the trash", Ed, but I think we all know what happens when the job isn't done. Look at the US Packet Radio net, to see a good example of what happens when the trash (LandLine Lids) are allowed to pile up too much.

Look to SEDAN to see a real Packet net, run by real Hams who care about our ability to communicate in times of emergency. Look to the now defunct TexNet network (Soon to be replaced by Non-Ham means of communication) to see where Greg Jones' policies have done to the ability of Packet ops in Texas to communicate during the course of an emergency, and where Greg's alleged "reasoning" is taking us.

Wake up and smell the coffee, Ed. Don't wait until Greg and his LandLine Lid buddies have had a chance to do any more damage to the hobby.

Y2K isn't going to get us but some fruit cake with the bomb might. I'm all for communications modes that make communicating better the only thing that I'm afraid of is the art of CW forever being lost all it would take is a few genarations and the art would be gone. Then what about amateur radio? If the dinosaur of CW goes away then the FCC or who ever is in charge willdo away with ham radio. I belive that once CW dies it will not be long and the service of ham radio will be right behind the CW dinosaur. We have technology! I beleive any time man tries to rely to heavy on technology he falls. I do belive that CW is the the net that is going to catch us.

> What is the appropriate frequency to call for assistance in a life- or
> property-threatening situation?

David,
First of all let me commend you on helping the other unfortunate person in the situation.

If you can key up various repeaters w/ your HT try finding which ones have autopatch. Keeping a list of important numbers (police, hospital, wrecker service, etc.) is a great idea too. Many club repeaters offer autopatch service for a minimal/no fee.

If you're using a repeater or simplex and you do not hear anyone on, call MAYDAY and your callsign. Continue to call until you raise someone, and be prepared to supply them with the information they will need to help you.

If a repeater conversation is ongoing, send the word "break" 3 times between the transmissions. In many areas the word "break" is used to enter a conversation, but to my knowledge "break break break" is recognized as emergency traffic everywhere.

You have just confirmed one of my biggest arguments about Morse Code. The problems with Ham Radio has nothing to do with Morse Code, and you where not sending or receiving CW. You where send and receiving modulated carrier Morse Code (FM) which would gain you little ground for DX (I know, except when used with SSB which might as well be (IS) CW).

Drop the Code, increases the testing across the board, mandatory for all including existing license holders.

1) no-coders will not want to populate CW frequencies.
2) There are only two US agencies backing narrow band transmissions
a) FCC
b) ARRL
Most commercial entities abandoned this aged technology.

As for me, I am still learning it because I want to. I like QRP and homebuilt stuff and it is just plain easier and more gratifying to build CW equipment.

My comparison of ham radio to a medical education was simply in response
to the analogy given in the previous post concerning the value of
historical connections.

By the way, in what way does the CW requirement "support basic
illiteracy"?

Amateur Radio is not the Smithsonian Institution. If you want
preservation, go out and proslyte, spread the word and teach people
code. Just don't expect the Federal Govt. to be in the mode of helping
your historical preservation. Nowhere in Part 97 is that a function of

the service.

(Can you imagine the FAA "preserving history" by requiring each licensed airline to fly at least one DC-3 daily on one of their routes?)

"SOS" still has the same meaning that it has had for 85 years.

Sending SOS for frivolous (non-emergency) reasons would be in violation
of 97.113(a)(4) ("false or deceptive messages, signals or identification;")

Just to see how long we can keep this thread going, is it true that
1x2, 2x1, 1x3, and 2x3 callsigns are for imbalanced people? ;-)

Right ... you need to use a 3 cond stereo plug going into the 990.
Just figure out which 2 connections key the rig. Pretty simple.
One is the tip I believe, but there's only 6 possibilities, just use
the wires at the 1278 end before you put a connector on it.

My FT-757GX manual has a picture in the front ... but it's at home and
I'm not ;)

Message-ID: <36B7318F.D04B9774@email.mot.com>
Source record: 151797

The subject says it all. I have have a HTX-202 lying around doing nothing 'cause the squelch stopped working properly. If I had a copy of the schematic I'd take another stab at fixing it.

There's a long sad story behind this radio, of RS bungling and that's why I never could get it fixed within the warranty period. Finally I gave up and stuck it away for the last 4 years. Yes, I know I can buy the service manual for bucks, but I'll be damned if I'm gonna give them more money after the way the local service center treated me when I tried to get it fixed initially.

So if someone can send me a jpeg scan it'd be a great help!

2543. What if "The Skipper" Knew CW?

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-02 00:00:00 UTC
From: marceeeee@aol.com
Message-ID: <19990202124433.01617.00000943@ng51.aol.com>
Source record: 151798

Recently, there have been quite a few posts regarding the hypothetical question, where it has been pondered, what if Amelia Earhart knew CW better than she did, and if she was a better radio operator than she was, would she have become lost?

On a parallel, does anyone think all the circumstances regarding the mysterious disappearence of the SS Minnow in the waters somewhere off Hawaii might have been different if the Skipper or even his First Mate, Gilligan knew CW better, which of course would make one a better radio operator.

To refresh some and to educate others, the SS Minnow, a cabin cruiser type of ocean-going water craft set sail one afternoon from Hawaii for what was to be a 3-hour tour of the surrounding area. The itinerary began with the boarding of the First mate, a mighty sailing man, the Skipper, brave and sure, and the 5 passengers. They group was rather diverse, consisting of a millionaire, his wife, a movie star, a physics professor and a little plum of a girl all of 22 years known only as Mary Ann.

The trip began during good weather although there were some storm clouds way off on the horizon. The weather started getting rough and the relatively small ship was tossed. It has been said many times, if it had not been for the courage of the fearless crew, the Minnow would have been lost. Most assuredly, the Minnow would have been lost.

The trip ended as no one would have imagined. In one of the most travelled parts of the Pacific Ocean, the Minnow and all aboard ran aground on an uncharted desert island. It would seem logical to think due to some of what transpired immediately thereafter, that some of those on-board somehow knew something dreadful would happen to them. All the women brought along enough clothes to last for years as did the millionaire. However, the other three men only had one set of clothing each.

While trying to repair the craft with glue made by the professor in bulk after being discovered by Gilligan, the ship broke apart as the glue dried. While breaking apart in a black and white mental sequence of images that has gone through many peoples minds since that awful day, it became apparent that there was no engine on this sail-less craft, no wiring harness, no guidence systems, no elctronics what-so-ever including any type of VHF marine band transceiver. The only radio aboard was a small battery-operated AM broadcast band receiver that did come in handy a time or two, but the question still remains, why would the Skipper go out into the open waters of the Pacific Ocean without a two-way radio?

One can only speculate what would have happened if the Skipper or Gilligan knew CW. Most likely, they would have been old-time radiomen and by that virtue, better mariners. They would have seen the benefit of two-way communications

long before it would become necessary. They probably would have had a wide assortment of radios including VHF marine band, UHF distress/search/recovery beacons, and HF gear with both solid-state and tube transmitters. They would have had along and old but still usable spark-gap transmitter with a straight key just in the event all that new-fangled SSB and FM gear failed or if terrorists stole the microphones . They most likely would have had extra contingency keyers such as paddles. They would have been able to listen to navagational beacons and WX reports. It is widely believed, that the crew of the Minnow missed some very valuable weather information that was broadcast over the usual frequencies by the USCG. Due to them not being good at CW, that caused them not to be old-time radiomen and that directly caused them not to have the foresight to install any two-way radios or even marine band receivers in the now lost SS Minnow.

If only they had learned CW back in the good old days...they would still be here amongst us...pounding their brass and their chests. They would know CW as few do. They would have no need for satellite communications and nav-aids. they could save their voices because they would be able to dah dit dah dit dah dah dit dah de etc, etc, etc. yadda yadda yadda 'til they're blue in the face and would be better mariners as a result. Yes, hindsight is 20/20. It is most unfortunate that they did not know CW and therefore, had no radio equipment with them at all.

Today, the Skipper is long gone. The millionaire lost most of his money on Black Monday in October of '89. His wife ran off with a Chippendale Dancer with no money but a killer body. The movie star was away so long, she lost her acting ability and youthful good looks. The First mate, Gilligan and Mary Ann now spend most of their time in southern California, either smoking marijuana together or being arrested by either CHP of LAPD officers for smoking marijuana. The professor went on to be a consultant in the cult classic television show "McGuyver". The desert island has become a resort where the one-time castaways get together for a TV reunion every few years when their money runs out completely.

The lesson for all of us to learn is...LEARN CW. LOVE CW. NEVER LET IT GO. Even though there are better modes available to us with more yet to be discovered, CW can save your life. It will make a better person out of you. It will give you the gift of forethought. You could get a merit badge. You will remember to buy VHF gear before going to sea. If you know CW, you will automatically be better at communicating over the airwaves regardless of mode since you will be more disciplined, courteous, and willing to help others. You will be better at all aspects of radio including radio wave propagation, electronic theory, antenna and feedline fundamentals, component values and of course, elmering the young.
You will also be better at contesting and being a net controller. You will be blessed with the desire to be patient and spend time with the slow newcomers to CW to help them learn what radio is really all about.

(About the author: A United States licensed Amateur Radio operator, General Class, 13+ wpm cw proficient (ok...it's been 9 years since I upgraded and have trouble sometimes...maybe 8-10 wpm proficient since I never use cw). I'm into

160-10m HF, 144 and 432 fm and ssb weak signals including EME (trying), satellites, tropo, mountaintopping, voice and digital modes. I have beams and dipoles and verticals (40m phased array), loops and ground radials. I even have a baseball hat with my call on it. I will not leave the house with it on. (Y'all who do look pretty silly). My opinion: CW at 5 wpm for entry level, then no more CW. If you want to become proficient at it, go right ahead (some people like keeping old cars and boats alive). Upgrading of Amateur licenses should be based on a more complete knowledge of radio fundamentals and RF theory. Make the written tests more difficult, but if the vast majority of the worlds navys and armys are going away from CW, it's time to leave it solely for those who want to do it. Not everyone does Packet. Not everyone does amateur satellites. The weighting of CW in the testing process is off kilter just a smidge. Knowing CW at 20 wpm does not make one a good radio operator...even that takes practice. Maybe it's time to start being civil with our tones of voice on the air and make good operators of ourselves first. Test us on how to be nice....on how to be patient, courteous, friendly, etc. Test us on the history of amateur radio, but not practice and become proficient in that history.)

(Call withheld because I know I'm gonna get a lot of flaming and I just aint in the mood)

I am now off the soap box.
It's someone elses turn.
Happy flaming.
I'm wearing Nomex fire-retardant turnout gear...I don't burn.
And please, don't fall back on the old stand-by "She's a girl, what would she know?" crap.

> By the way, in what way does the CW requirement "support basic
> illiteracy"?

That isn't what I said.

What I have said in the past is that the love affair that the ARS has with
Morse code approaches a cult, and that is a bad thing. We constantly hear
stuff like this, "Morse gets through when nothing else will". "No DX mode is
better than Morse". "All that technological stuff just doesn't work."

These statements are either meaningless or false. Yet because Morse skill is
so highly praised, this basic illiteracy is promoted, largely for political
reasons.

You can worship the cargo planes that occasionally drop packages from the sky,
or you can figure out how to build airplanes. It's your choice.

2549. High levels of noise... caused from power lines?

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-02 00:00:00 UTC
From: tech_support9@geocities.com
Message-ID: <797k87lej1@nnrp1.dejanews.com>
Source record: 151804

Recently, I've noticed my HR2510 base station has about 7lbs of continuous noise level, on all frequencies, at all hours of the day.

I though perhaps it was something in the house causing it, and powered off all the lights (florescent) and powered off the 2 pcs as well as any other noise-making electrical devices. No good.

I installed the 2510 in the van in my driveway, and found the same results. Pulling out of the driveway, and down the road, the noise level decreased to a normal level...

Could it be that the power lines, or something on the pole outside is causing the intereference???

I'm going to contact the electrical company for some info too.

Any help would be appreciated.

Funny how we have such a different take on things. Since code IS still required, and the testing has NOT been changed in the past three years, I see nothing that has changed in that time frame to justify such a conclusion...

Alan Graves wrote:

> Finally, the last official use of that throwback to the past, CW, has as of
> today officially been discontinued by the maritime community.

Dear Alan,

Current reports on the *end* of radio telegraphy are greatly
exaggerated.

And 500 kHz hasn't been *closed* either.

In line with changes in the maritime radio service, the obligation to
keep a continuous watch on 500 kHz for distress traffic has been
eliminated and, as a consequence, some coastal radio stations have
ended this watch.

Some, but not all of them, have on the same occasion closed commercial
telegraphy service on this band, as well.

A scan of the maritime 500 kHz band, last night, showed all Italian
stations (Bari, Ancona, Cagliari, Trieste, Roma, Genova) still broadcast
long weather reports, nav warnings and traffic lists.

Stockholm, Szczecin, and Gdynia were heard with weather and warnings.
All of this in telegraphy.

A quick listen through the maritime HF telegraphy subbands reveals much
the same picture. I've rarely heard the dead make such a lot of noise...
:)))

Admittedly, this may not go on forever. But for the time being,
telegraphy in maritime radio is still there for all to enjoy it.

Cheers,
Ralf

2555. Re: What if "The Skipper" Knew CW?

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-02 00:00:00 UTC
From: rcr3316373@aol.comNojunk
Message-ID: <19990202142856.02478.00001856@ng105.aol.com>
Source record: 151810

(Nice post, but rather long, couldn't decide what to snip so I snipped it all)

Well marceeee, there were only 5 passengers.. does that give anyone any clues? Yep... the M/V Minnow (It is unlikely that this was a steam powered vessel, so SS is not correct) was probably an uninspected passenger vessel, and as such could carry up to 6 passengers. This vessel would not have been required to carry a radiotelegraph station, and depending on route, may not have even been required to carry an HF radiotelephone station. They would, however, have been required to comply with the bridge-to-bridge radiotelephone act, and so they should have had a marine VHF rig in the space from which the vessel is normally steered, i.e. the bridge. Having a radiotelegraph station voluntarily installed, and licensed, would have required that at least one USCG licensed and FCC licensed Radio Officer be onboard, and two of them if the vessel were not equipped with an autoalarm.

No, I think the addition of an R/O would have messed up the group's dynamics. The R/O would have taken much of the Professor's raison d'etre away and made him seem redundant. He also would have skewed the male/female ratio such that fights would have broken out constantly. And they might never have found themselves marooned indefinitely and so we would have never had such an entertaining series.

An old hot-stylus WEFAX receiver would have been nice, I guess. This was before PCs and datacontrollers or even the humble Hamcomm interface. They would most assuredly NOT have had a spark transmitter. I think they ware pretty much gone from ships by the late 20's but I'm fuzzy on that. However, one could certainly have been built once they were marooned and had a bit of time on their hands. The engine, assuming there really was one, was probably electric start. There would have been an alternator or generator, and an electrc starter, and if a gas engine, one or more ignition coils.The house electrical system was probably 32VDC, and there would have been three great big truck style batteries. The house wiring could have been salvaged for an antenna. Since there was a transistor radio, I think it is safe to assume that an actual CW transmitter could also have been built, but it would have been confined to QRP levels, so spark would have been the way to go. The broadband characteristics would have assured that somebody would have heard them. A CW rig would only have fundamentals and harmonics, and they would have had no way to determine accurately the frequency they were transmitting on, since for a CW rig they would have had to trash the receiver. The castaways were pretty handy at harnessing wind and waterpower, so I would assume that they could have powered the transmitter, and they would have still had the receiver for monitoring their sending.

I always thought of MaryAnn more as a peach than a plum. I never liked Ginger, though. but MaryAnn? MMMMMmmmm. Nice.

So, on the one hand, too bad there were no trained Morse operators aboard M/V Minnow. On the other hand, it's a good thing there were not.

BTW, why are you worried about somebody flaming you? I can assure you, you won't feel a thing, except contempt and maybe pity for the flamers. Go ahead and use your call. Everybody else does.

Yes...power lines and transformers are notorious for noise. You are moving in the right direction by contacting the utility company. Once you get past the customer service reps on the phone and actually speak to someone who understands electricity and not just billing inquiries, you'll find most utility companies are willing to help in these situations. Filters, attenuators and the like will do nothing once it has been determined the problem is from the pole and not a device in your home...although, have you taken a small portable receiver that is suseptable to the noise for a walk in your neighborhood? Use it as an RDF unit. You may find it's not the utility after all, but maybe a neighbors fluorscent lights or household device causing you a headache. My neighbor had a fluorscent light in his garage (on...all day and all night). I was going nuts. thought it was the garbage can-sized transformer

on the pole30feet from my house. When his garage burned down, the light went off...no more RFI! (No...I didn't burn it down, it was an act nature...Stupid threw a cigarette butt on a pile of leaves that was holding up the gas can for his mower.)

Good luck

My point is.....IM SICK AND TIRED OF HEARING ALL THESE EXCUSES ABOUT
LEARNING CW. No one say's you HAVE TO USE A STRAIGHT KEY. Try a simple
sideswiper. (a horizontally moving piece of metal, i.e. saw blade, and
contacts on left and right side). Or get hi-tech, use a touch sensitive key
and only move your fingers. Even a KEYER would be easier than a hand pump.

>

I find it amusing that this is claimed, when 20 years ago and more there were tips and techniques available to prevent problems for people who sent a lot of CW. either with handkeys or with paddles. I also used to meet former radio officers on ships, who could no longer send CW because of what we now would describe as carpal tunnel, although it had a new name. I suggest reading old copies of 73, QST, HamRadio, and CQ for the discussions of how to set up a key and/or paddle. It should also be noted that secretaries used to have their complaints dismissed as women's meanderings in the days of manual and electric typewriters if they brought the topic up. Considering that people who knit and crochet a lot can also develop problems as can people who do repetitive motions with the wrist relatively fixed in factories, dismissing the claims as balderdash is just a longing for the days when the syndrome couldn't be readily detected or was dismissed.

See my earlier posts. The problem with taking advantage of the
"use any frequency and any mode in an emergency" scenario is the
amount of questions you had better be prepared with the right
answers for in terms of whether it was a real emergency and
were there other means you were authorized to use and did you
try them and why didn't they work.

2568. Would you please send King Hussein a QSL get well card?

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-02 00:00:00 UTC
From: admin@geocities.com
Message-ID: <X8tt2.119$ZA1.2685772@petpeeve.ziplink.net>
Source record: 151890

Greetings.

Please read the following piece from the ARRL Letter dated 1/31/99.
One of our fellow hams needs our help.

King Hussein, JY1, back in US Hospital

"Jordan's King Hussein, amateur radio station JY1, headed back to the US January 27 for what press reports are calling "urgent medical treatment" after he suffered a relapse in his recuperation from non-Hodgkins lymphoma, a form of cancer. Before leaving Jordan, the king named his eldest son, Abdullah, as his future successor and as regent in his absence.
Hussein, 63, had returned to Jordan January 17 after six months of chemotherapy at the Mayo Clinic in Rochester, Minnesota. He'll return to the clinic for further treatment. During his earlier stay in the US, Hussein had occasionally taken to the amateur airwaves, much to the surprise and delight of those who encountered him--usually on 20 meters"

According to medical experts, non-Hodgkins lymphoma is a particularly tough form of cancer to treat. As a result, King Hussein needs all the help that he can muster, and I believe that hams can lend a hand here.

Mayo Clinic officials stated that they welcome any get well wishes that hams might wish to send. If you'd like to send a "get well greeting" to the King, pen a quick note on the back of your qsl card, and mail it to:

King Hussein
Amateur Radio Station JY1
The Mayo Clinic
200 First Street Southwest
Rochester, MN 55905

If things work out properly, our QSL cards will be just the thing to help the King beat this debilitating illness.

Please feel free to forward this message to anyone who might have an interest, and please join us in wishing JY1 a full and quick recovery from his illness.

Thanks,

Chris and the WARA gang.

We've got more licensees now than at any time in our history.

>If
>your're not getting a large rise in new members relinquish some of the
>band width to commercial interests and the public at large that need
>that need them.

Our M/HF bands total 3.75 MHz. We don't need any more users down
there than we currently have (and no commercial users are interested
in our HF bands). OTOH, to get on V/UHF, no knowledge of code is
necessary. Those bands *are* at risk and the no-code license has not
guaranteed their safety against commercial interests.

Note the phrase "In most cases..." Besides, it really wasn't
cross-posted. It was sent to each individual NG.

If you know of a method of sending out FAQs to all NGs within a
hierarchy without sending them out to all NGs, please let me know. =:o

Thanks for your valuable input,

What you are not aware of, is that for a period in 1991 or 1992
K1MAN was a player in the infamous 14300/14313 fracas, just as
porkbutt and several other were, or are, at this late time.

Glen Baxter entered the 14300/14313 net wars at a period just prior
to the recruitment of the large masses from the 75 meter garbage pail.
He was "recruited" by noneother than the creator of the whole mess
KV4FZ, after Herb started making comments about how Glen "The Boy
Broadcaster" Baxter was tearing up 3975 on a nightly basis with
his IARN Bulletins.

Herb did this for only one reason - as a master at the art of manipulating
people, Herb knew that if he could get Baxter into the 14300/14313
mess, it would gain much publicity in the ham circles and draw an
entirely new element into the fray. Herb knew that N5FX (his nursery
rhyme CW code practice tape player) was fading fast due to poor health
and the "Mike and Judy Show" was good early in the morning and at night.
He needed a fill-in and Glen fell for it, for just a short time however.

IARN Broadcasts even started appearing on 14300 / 14313 for a short
period, and Herb just sat back happy as a ever, since people who did
not like the IARN then started to come up on the frequency and exponentially
grow the level of daily QRM.

Glen soon saw that he was being indirectly used by KV4FZ, and left one
day, not to be heard from. K1MAN was alot smarter than the other
nitnoids on 20 who would let themselves be used by KV4FZ, or the
Maritime Nets, who also employed "bird dogs" to seek out QRM'ers.

Unfortunatly, the 75 meter genie was out of the bottle and shortly thereafter
several of the 75 Meter "fruits" started to appear on 14300 / 14313 drawn like
flies into a milkhouse.

The rest is history.

So you see, Mr. AM-FM-USB whatever, some of us know what really went on.

Sometime, if your a good little boy, I'll tell U a fun story about alleged
packages from Oakracoke, dead rats in boxes and sweaty old men

in shorts and moo-moo's (hint)

2577. What Freq in an Emergency?

What is the appropriate frequency to call for assistance in a life- or property-threatening situation?

Yesterday I was driving down a mountain road in a snow storm. The car in front of me slid into a snow bank and we needed the assistance of the highway patrol and/or a tow truck to extricate the car. The cell phone was out of the service area and all I had was my handheld 6m/2m/440 radio.

I tried the local repeaters, but received no response. I tried 146.52 and received no response.

How would you have contacted help in this situation? What do you recommend I do in the future in a similar situation?

I am a new Ham and this is precisely one of the reasons I got my license.

Any advice would be greatly appreciated.

> only remaining users of this dinosaur is those hams who refuse to give up
> this once important but now archaic waste of bandspread.
Alan I'm happy to see that you are happy that code is dead. I truly
think that yes it is a old form of communication but a trusty one too. I
also would like to all HAMs learn this art. I do belive that we are
depending to much on technology. Amateur radio operators are supposed to
be able to communicate when all is gone. I honestly beleive that we need
to have some terrible thing happen here to open our eyes to what we are
about to do by allowing this art to die. Its still a important reliable
form of communications. I think that it is our best interest to keep it
alive. It may be the only form of communications left after the big one.
I hear more and more people say oh no that can never happen BUT they
said that Titanic was unsinkable and look what happened. After WWII they
said the dogfight in the air was dead a thing of the past and Korea and
Veitnam proved that wrong. I think that CW still should be a requirment
for getting your ham ticket. We are supposed to be communicators, with
CW one can communicate with two live wires.Has anyone heard of a spark
gap transmiter or even remember? We as amateur radio operators are
supposed to be a pool of trained communicators and CW is a important
part of that training. I think we would be in great danger if we lost
this art completely.
Now after saying all that before I could copy and send code I thought
that losing code would be the best for all. But after taking the time
and effort to learn CW i'm truly glad I did. It can be a fun form of
communicating. Thats just my opinion I could be wrong.

Hi, David

Unfortunatly, there is no universal emergency frequency for Amateur Radio.
On the VHF bands, you need to know the local repeaters, and hope somebody's
listening.

There have been many plans put forward, including the LiTZ (Long Zero
Touch-Tone) plan to alert hams who don't want to monitor repeater traffic
but are willing to handle emeregencies, and a plan for hams to monitor .52
at regular intervals in wilderness areas. None of the plans has gained
anything like nationwide acceptance.

I hope you're not too disappointed. Amateur Radio does handle a lot of
emergency traffic, but there's no guarantee that someone will be
everywhere, all the time. Still, the more people around like you, who are
actively interested in providing help, the more coverage we will have.

73,
Gary Pearce KN4AQ
Cary, NC

Word has it that the now famous pork but is crashing Jimmy's Netscape. Jimmy wrote my web master today and told hime that he believed that I was crashing his netscape. Jimmy I thought that they tought you how to use a computer while you were in jail or were you to busy with bubba and you didn't go to school that day. Jimmy you should of pay more attention in clas instead of all your attention on bubba.
I truly would like to know who is crashing Jimmy's Netscape. I would just love to shake your hand. You really don't know the service you are doing for the whole internet communityI would like to take this moment to say THANK YOU
Jimmy I wonder how much longer it will be before your back in jail for selling dope to those neighborhood losers that keep stopping by your house. I bet you can't wait to see Bubba again! You are a fat ass loser Jimmy! I'm laughing at you. Would you like a little cheese with your wine.

Gary,

Thanks for your reply.

No, I'm not too disappointed. I was just hoping that it would be easier to use amateur radio in an emergency situation.

I am aware of the LiTZ plan and the idea to monitor 146.52 on a regular basis. I think that this is a good idea and would certainly like to see something like this worked out. As a private pilot, I know that I can always reach someone on 121.5 and such a system in amateur radio sure would be nice.

Oh well.

Perhaps radio began that way, but it is exceedingly easy to slip from paying
homage to one's roots to establishing a cargo-cult science to support basic
illiteracy.

> No-Code whiners are liberals. They don't like something so they trash other people to make themselves feel better. That is why they like the ARRL proposal too. They can get something they don't have to work for.

HamMan's post is liberally sprinkled with the word liberal.

First, the amaterur radio service is a grant, privilege, license program, whatever you want to call it, established by ALL U.S. citizens through the FCC. If a large number of Americans want to establish a licensing program without Morse Code requirements so be it.

As for Clinton, I don't give two hoots about the man BUT if the President of the US can't get laid, then I don't know who can.;-)

As a no code whiner I am not out to trash other people, only to make the radio amateur program accessible to more U.S. citizens.

Dropping Morse Code doesn't mean you don't have to pass any test. A one hundred question test with more radio theory would be a more appropriate test. Knowing or not knowing code doesn't enhance my knowledge of operating a station safely and competently.

When the FAA made the instrument rating easier to obtain pilots howled how the system would be degraded. Nothing of the sort happened. The requirements for obtaining a ham license can remain stringent without requiring code--IT IS KNOWLEDGE, COMPETENCY, SAFETY AND SKILL THAT SHOULD NOT BE COMPROMISED.

Why not incorporate a "practical" test and have the applicant identify resistors, transistors, a SWR meter, or whatever.

What if there was no society. I'm just saying that cw shouldn't be
killed. I think that its a big mistake to let it die.
Yes but TCP/IP will not work if the phonelines and the power is out and
electricity is to be saved. I'm telling you the art of CW needs to be
practiced. you never know what might happpen have you seen the movie

"The Postman" I think we all need to rethink this code death.

I never thought I'd write this, but I ust finished a CQ on 40M and was answered by KM4LT who came back at 3 times my sending speed....an etiquette no-no. When I asked him to please QRS (slow down) he blew me off and just started sending CQ on my frequency. See...nothing special or almighty about coders....all the more reason to do away w it. (I used to be pro-code and now I have shifted 180 degrees) There are too many very intelligent and knowleadgable techs out there to keep 'em off the HF voice bands just because they can't do code at 13-20WPM.

You asshole , his sex life is _NONE_ of Ken Starr nor the government's
business in the first place.

You've cried and whined for ages on here about the government's
unfair/illegal imposition of code tests but yet you endorse their
intrusion into an individual's sex life. Weird logic at best. Maybe
you should whine less about code tests and try a roll in the hay more
often.

Hi,

Since sunday the 'new and improved' website of the Waaslandse Radio
Club (clubcall ON6WL) is on line.

There's a page about the 40 year history of the club and also a
logsearch for SV8/ON4BB, SV8/ON5JE and KL7/ON4BAM.

bye Maurice

Hamradio: ON4BAM

And, of course, when all else seems to fail, the nocoders
can always revert back to their worst-case claims.

It has been more than adequately established here that the
reason that most code advocates believe that testing should
be retained is that Cw as a mode on *HAM RADIO* is still a
very viable and useful mode, still has a great many users

today on the ham bands. It is legimitately believed that it is a necessary skill to be learned by all hams who plan to engage in HF operations so that they can and will be able to use it at least a minimal level on occasions when it should be needed, not only for emergency operations but for the prevention of intermodal interference to other ham operators.

Yes, that's a concept that may not have been previously seen here, different from the old reason of 'avoiding interference to other services.' But anyone who operates the digital portions of the bands using CW today knows the reason for it. Many digital operators seem to neither know nor care that they interfere.

Could it be that they need CW training? Yes, I know "they aleady passed code tests or they wouldn't be there". So they don't have an excuse. In a no-code license future, what will be the excuse? "I couldn't copy Morse code?" One couldn't even inform them that the frequency was already in use. Of course they SHOULD know that but......

Steve,

Have you checked at a Radio Shack? (Presuming you are located near one)

I have an old RS portable citizen's band radio that uses two dummy cells
when using 1.5V AA batteries instead of 1.2V AA rechargables. They are
a lead-like cast dummy with a thin body and normal sized top and bottom.
Perhaps they can get them for you as a replacement part ... radio is a
TRC-209, #21-1660 if that helps at all.

Those skills could very well be required in a life-and-death situation,
and so are worth learning. Knowing how to fly a DC3 falls into the
historic preservation category, as does, I believe, mandatory knowledge
of CW.....since no one has shown that cw plays a role in modern ham
radio emergency management communications.

Try Radio Shack. Some of theeir CB walkie-talkies come with
two dummy batteries (so the user can load either ten NiCd's
or eight alkalines + two dummies). They surely don't sell
the dummy batteries over the counter, but I'd bet they can
order them as a service part for the CB W-T's. Try it!

CW is a lot fun and not really very difficult to learn. There
are also decoders for CW. In my opinion, CW adds an interesting
and useful dimension to ham radio. Long Live CW!

Steve OM,

Why not just make two out of wood, with a jumper? Cost is zero.
I made a "false" battery pack for my portacle VCR and camera (no,
not a 'cam-corder'), by cutting a block of wood the same size and shape
as the sealed battery, complete with two copper contacts and leads.
This enabled me to use the setup off my cigarette lighter jack in the car.
Another zero cost solution (my favorite kind!).

73,
Don, W6JL

> Jeff WH6U

Every broken microprocessor-controlled radio I've ever seen was
unworkable due to static electricity and/or lightning which
damaged the RF stages, the stages exposed to the "elements" as
it were. Take a look at the MTBF figures for the different
components in an RF transceiver. The MTBF number for the RF
I/O is a magnitude less than for the digital electronics.

Some hams don't seem to realize that frequency and wavelength are related
by a constant and are therefore, interchangable. The term, "2m", is not
context free just as the word, "power", is not context free.

Dear BD,

First, you should make sure that the window glass is not tinted with a
metallic dye -- this will alter the glass dielectric as well as
introducing losses. Since glass-mounted antennas are capacitively
coupled end-fed electrical half-waves, the mount point is high impedance
and must be kept at least one inch from the glass borders as well.

How much (square feet) of concrete do I need to pour to hold up a 60ft free-standing tower? How deep in the ground do I need to go? This is in a light-wind area and the antenna load will be about 2 square feet. Soil is clay. I'm thinking I can do my patio and tower all at the same time!

Also, I've seen a couple of towers that were bolted to the concrete in the ground via these large bolts - facilitating easy removal I would assume. Is this the way to go?

Thoughts?

"Penis" and "vagina", although the correct term for body parts, can be used in conversation in such a way as to be obscene. Most decent intelligent people would not use them in a public forum like this in the context of a dirty joke.

While it is their right to do so, it is also the right of others to complain of the boorish behavior.

That said, I can't imagine why anyone would be surprised at x-rated content on Usenet...

Hi,

My neighbor is a ham and recently talked to someone but failed to
get his name and hasn't been able to connect back with the person.

He isn't on the Net so he asked me if I could find out who it was since
it was someone local and he could then call them on the phone.

I went to four different Amateur Radio Callsign Search engines and each
time get a 0 response. Evidently it is a new number or for some reason
the person isn't listed.

Can anyone tell me any other way that I could find out who W6PHP is?

Thanks..

I know it isn't appropriate to ask for a direct e-mail answer but in this case
I hope you understand, not being involved with amateur radio I would never
use this Newsgroup normally. If it isn't possible, I'll check back later...

Thanks,

> sufficiently large response by email, I'll summarize for the group.

As you get faster you will start to develop a built in buffer to store a
short bit of code, while you are proccessing the current letter. But
there is no real way to develop this without plain old practice. As I'm
a musician and have been since I was in 4th grade, "not professionally",
I can say that most of the people I talk to who are musicians find the
code easy to pick up. Almost all that I knew in school are now hams and
are good at code. So I think there is some link that makes a musician
learn code easier than a non musician. Not sure what it is though. If I
was you, I would first pass the 5 wpm and get a novice or tech plus
ticket. I consider this a MUST, as you need a way to get on the air to
practice. You can try code tapes, but myself, I don't have much use for
them. Once you learn the alphabet , there is really no need for tapes.

All that is needed after that is to practice. Preferably on the air to real people. You might be able to start at 20 wpm, but, you will have a heck of a time. And likely would end up not really knowing code that well. You would be stuck at 20 wpm character and spacing speeds and the first guy that came along at 10 wpm would throw you off. You MUST be able to copy BOTH slow and fast at the beginning. Once you get to 10 wpm, THEN , you want to start using fast speeds ala, farnsworth method to raise speed. Once you start working code, and getting good, it will be automatic. Just like when you read music and see a C note. You don't have to think , hummmm a C, I will put my finger here. Nope, you do it automatically because it's been drilled into your brain as a habit. Takes appx 21 days for a habit to be developed. So you want to spend at the minimim, 3 weeks per speed level. Really in the real world, cw speed comes with constant practice, just like anything else. There are NO real shortcuts. And it's not something you can grab off a tree and eat and do it.Practice, practice is the key. Once you pass 20 wpm, the speed increases start getting faster and faster until you reach the block point to where you can't physically work the keyer that fast. Then to bust that level, it's keyboard time. Which I hate. So I'm pretty much stuck at my maximum iambic keyer speed of appx 55-60 wpm. I'm dropping back now due to lack of high speed practice. But I can still do at least 40 wpm no problem. It all boils down to wanting to do it, and KNOWING in your mind that you can and will do it. Good luck, with plenty of practice you will have no trouble. The best practice being on the air. MK

Ask the VE group that you plan on taking the exam from. I walked into one and
They asked how we wanted the code sent. For the 13 wpm it was sent at a
character speed of 15 wpm but spaced to 13 wpm. Some will just send from a
tape and can not change it, but this was sent with a programable keyer and
could be set to anything.

>I get the feeling that at 20+ WPM, you're not going to have time in your
>brain to say "dog-did-it" or whatever the CodeQuick mnemonic is; you just
>have to know what the sound is instinctively.

Since you're a musician, the rhythm patterns for each of the characters should be just as recognizable as the mnemonic for you. I think the CodeQuick mnemonics are more helpful for people who have trouble recognizing and remembering the rhythm patterns. Use mnemonics only for those characters you have trouble recalling quickly. I think I had to rely on "here comes the bride" for Q, and Bethovens 5th for V for my 5 WPM exam.

I used both Super Morse and Morse Acadamy to learn the characters. For me, the best practice was on 40 meters. I went from 5 WPM to 20 WPM in just a few months by having fun on the air.

I think your thoughts about learning code are correct. The translation process must (and will eventually) occur without conscious effort. Get used to listening to the characters sent at a higher speed than the word speed. There are two advantages to this. The first is that you will move to higher speeds more quickly, and second that you will have more time to recognize each character before the next one comes along.

Listening to and deciphering code is not unlike learning to play a song, or a guitar lick by ear. If you can pick up and remember an entire guitar lick by listening to it, then you will find you won't have much trouble copying words in your head as they are sent. Your sight reading analogy is probably also true, but I was always terrible at sight reading - which probably explains why I'll never be a great CW ops. :-)

Good luck, and have fun.

Look in the ROHN book....no tower is athorized over 30 feet free
standing.... if yo insist on it use 2 cu yards colume about 5 feet
deep. find 3 solid steel rods about 3 feet long adn insert them up the
tower legs about a foot, bolt them in. then use only the bottom
section of the tower for a vertical guide while you pour the concrete.
carefully make the section vertical till the concrete sets. that way you
can remove the tower later if you choose. 60 feet is a long way, at
least tie it to the house at the 8 foot level wiht a bracket... the
tower may have only 2 sf of area but the 4 element beam has 5 or 6 sf..

good luck

Is this another in the "family" of CQ publications? They certainly have had an anti-cw slant for years. When I canceled my subscription, I told them it wa because of that position.

Now I have to decide what to do with a nearly 30 year old ARRL membership.

I used 2 x 2 x 6 feet deep to anchor a 56 footer with tons of stuff hanging off it. It was far
more than was required, but it never moved. 2 x 2 x 4 is more than enough, but will you be able to sleep nights?

You might also want to consider countersinking the tower base -- that way, if you ever want to make a change, after you cut off the anchors, you can fill in the hole.

I've made them before. Take a piece of copper or brass tubing that's the
right size to
make connection at the positive end. Cut it the right length.
Take a piece of wood dowel the right diameter for the battery case and drill a
hole
down the center for the brass tubing. It's tough to get the hole centered, so
make it
oversize and use hotmelt glue to hold the brass in the center.
Can get all the parts at a hobby store. or hardware store or...

You can accomplish the same thing by cutting a slot down the side of the dowel

and running a wire between two thumbtacks.

Here's THE solution to all the whining and bickering about no-code vs code, appliance operaters vs the techs, etc. If you don't like the nocode, nontech folks then why not build your own gear and start populating the portions of the spectrum that the appliance operators won't easily be able to use?? That way the over the counter hams (aka OTCH) can go to their favorite store and buy stuff off the shelf and plug it all in. They can operate in the bands that they can afford to buy equipment for, the tech/coders can use the portions of the spectrum that aren't currently being used yet are available for amateur use. What, CW on microwaves?? Why not! Even the military does it this way. Operators don't fix/build equipment and the repair folks don't operate gear in the field. This division has been happening for eons and has worked just fine. Now everyone is happy for many reasons:

1. The nocode/nontech folks can get on learning more about operating amateur radio and not get hassled from the code/tech ops.

2. The code/tech folks can get what they want, plus not be hassled by listening to the nocode/nontech folks.

3. We (hams) start using more of the spectrum assigned, and start to lessen the threat to our bands.

4. More experimentation happens, things get designed/implemented/built, people learn.

You people want to insure emergency communications during hurricanes and other disaters then maybe you need to rethink allocation of a portion of 2 meters to the low earth orbit satellites for communications.. Hurricaines and earthbound disaster would have little or no effect on them and would do away for the need of a middle person to handle communications in and emergency...

Of course this makes sense so don't look for a lot of support from the amateur community for this...

Dangerous question. I would recommend a pile footing, size based upon wind loading, soils lateral bearing capacity (you mentioned clay), local codes and what SHM (tower sway) would be expected in a wind.

By the way, a pile footing is circular in cross section and extends to some depth into undisturbed soils. Usually a large diameter hole augured into the ground. Set rebar cage and anchor bolts and pour concrete.

My advise? Hire a Civil or Structural Engineer. It won't cost that much (a few hundred bucks) it will make the building department happy, and you'll sleep well.

All of my transceivers are microprocessor controlled, even my QRP rigs.
I was a microcontroller applications engineer for Intel for 13 years.
I have never seen a failure of the digital logic (including the micro-
controllers) in any of my ten or so transceivers.

> I'll agree that RF circuitry fails more often, but MPU failures are not at

I've only had personal experience, not bench repair experience. I use
opto-isolators and transorbs - seems to protect the digital logic just
fine - knock on wood.

for free standing i would go with 4'X4'X3', 48 cu ft. or 1 3/4 yard
(pritty close) if you pour your patio at the same time 1 cu yd 4" deep
will do about 80 sq ft. ..... personally i would set the first section
in the concrete. but the bolts will work too.. use at least a rohn 25G
tower. a rohn 20G would be better yet. ......dave....

The problem is that microwave frequencies are more amenable to high-bandwidth communication technologies -- CW would be less necessary there. Microwave signals are also severely range-limited. The best use of CW is on the HF bands as a weak-signal DX medium. So, a better suggestion would be to let no-coders use the high bands and restrict access to the long range HF frequencies....oh gee, I forgot...we're doing that already...

You people somehow think I"M the one at fault here. I just love newsgroup know-it-alls. You don't think I know what 5 WPM sounds like (and what I send) and what 13-15WPM sounds like (I'm studying for General and have heard this code speed MANY times...THATS how I frickin measured it you idiot!...what do use, your computer?..some art to that!)...i.e. 3x5 equals 3 times faster. Thanks for the great advice...jeeez. I love the way you infer things that just are not so......no defenders out there but one huh....everyone is stupid but you guys right? I'm really impressed but I didn't just fall off the CW turnip truck. Bring me back CB Rambo and Burt Fisher...they seem to be more right about hams than I thought...at least the ones that haunt computer newsgroups, which I will no longer do....spread that goodwill. If there is a problem, it MUST be the poster's fault. Well you people were not there now were you. You just assume I'm so incompetent that I send faster than I can hear and am not aware of it...wrong. And thanks for nothing. Now everyome crawl back up on your high horses and haunt your computers instead of your radios so you can feel tough. dit dit dit dah dit dah

I have a HYGAIN HS52 and their specs call for a base 42"X42"X51/2feet with 4" above ground. I have this tower fully extended with a 4 element tribander on top of a 10 foot mast. It has been up in 85 knot winds with no evidence of swaying. It was put up according to HYGAIN's specs. If you want, I can scan the base and email it to you.

As you drive around, anywhere in the world, you see self-supporting Cell and PCS poles 30 to 120 feet tall with no guys and a large cross section wind load at the top. I invite you to take a ruler and measure the diameter of the concrete pier underneath, and then count the number and measure the size of the bolts through the base flange. Now do you have the idea?
Crazy George
P. S. Almost anywhere these days you can see one of these being started. Look at the hole size before it is filled with cement. Careful! Don't fall in!

news:79ahnv$h5p@dfw-ixnews9.ix.netcom.com...
Hi,

My neighbor is a ham and recently talked to someone but failed to
get his name and hasn't been able to connect back with the person.

He isn't on the Net so he asked me if I could find out who it was since
it was someone local and he could then call them on the phone.

I went to four different Amateur Radio Callsign Search engines and each
time get a 0 response. Evidently it is a new number or for some reason
the person isn't listed.

Can anyone tell me any other way that I could find out who W6PHP is?

Thanks..

I know it isn't appropriate to ask for a direct e-mail answer but in this case
I hope you understand, not being involved with amateur radio I would never
use this Newsgroup normally. If it isn't possible, I'll check back later...

Thanks,

Jack Rhondeau Jr.

Hi All
I would post this question on the towertalk reflector, go
to http://www.contesting.com, you will be able to find the
instructions for the reflector. As a minimum a rohn hbx56
requires a base that is large (5 1/2 x 5 1/2 x 4 deep if
memory serves me with lots of rebar).

I doubt that. Just need more practice. You can go from 20 to 40 wpm
about as easy as going from 5 to 20. Maybe easier. The key to going much
past 20 is to only write down the important stuff and just listen to the
rest. The writing down of the text is an unnecessary step. Once you can
do away with that, you can really get the speed up. MK

>Y2K isn't going to get us but some fruit cake with the bomb might.

Good point. The communications system in the United States is "thin". That is, it does not take much to disrupt it. Example: instead of microwave towers, we now relay on satellites which can be disrupted in a number of ways--natural and man-made.

CW has one great advantage. You can get down in the low end of the band and talk away. And nobody comes in with snide remarks, playing tape recordings, or cussing. So, those of us who enjoy it will continue to do so. The rest of you can sit around your SSB rigs and put up with the hackers. If you enjoy interference-free QSO's, come join us. It takes only a little practice to understand what we're saying. And yes, many of the conversations are about hi-tech, state-of-the-art subjects. Phone converts usually feel right at home.

It's a pity that CBS made that claim, for the signal ..._____... is
still the international distress signal, and our Part 97 still forbids
us from sending false distress signals.

What has happened is that maritime communications now has another venue.
Regardless of what the news report said, CW is alive and well on the
maritime frequencies outside the U.S. (Eastern Atlantic hams have reported
that traffic on 500 kHz is as usual, especially in Mediterranean waters.)

1) Was it phone or CW ? Probably phone, that is why they didn't get rescued.
You know that CW is the only mode that gets through under all circumstances.

2) Did "The Professor" have a ham license ? How could he have used the ham
radio set without one ? Since he presumably didn't have a license, then it
would've been OK for the hams to jam him --- which explains why nobody could
communicate with them & effect a rescue. If he did have a license, why did he
have to build a radio --- wouldn't he have had his HT with him on the boat trip
(along with his hat & call sign badge) ?

Typical ham response. The guy is dying of cancer, and someone is all upset over some stupid amateur licensing matter 30 years ago. Of course, it involves CW so I guess all bets are off.

If you don't want to send him a card, fine. But don't be a petty idiot.

Hardly true. Given the appointment(s) of duties I have received
from the ARRL which are only given to the more dependable, higher
experienced/licensed, there is NO WAY I could be any kind of an
embarrassment as you indicate.

> although he has a history of losing ISP accounts

WRONG! I have NEVER lost an internet account.

> description, Mackey is an Internet terrorist... The best we

How FUNNY! I did a brief review of YOUR posting history on Dejanews
nearly every message is some pathetic drivel of your bragging
about your volunteer fireman duties & owning your own company.

WHO cares?? ANYONE can do that or similar!

> Jim Baker, N9PEK
> Amateur Radio Operator

So far, all you have done is make a FOOL of yourself & give amateur
radio operators a bad name. Please stop.

>
> Dan/W4NTI

I spent $25 two weeks ago on a practice key that makes its own tone. I'm trying hard to learn and my arm is aching. I haven't had a chance to try anything else and I was hoping my $25 would serve its purpose. I have *no* objection to learning code. I think they should keep the code requirement, even though it's an obstacle for me right now. All I asked was whether anyone else was dealing with wrist problems. I don't think I implied anything offensive on any subject but you've tried to pick a fight over nothing in *two* postings. I thought experienced hams were supposed to be helpful.

Request: If you respond to this posting, please send me a copy. My net access is intermittent. Many thanks...

>I never thought I'd write this, but I ust finished a CQ on 40M and was
>answered by KM4LT who came back at 3 times my sending speed....an
>etiquette no-no.

When I was learning the code at Coast Guard Radioman School, we could advance to the next speed only after we attained 90% perfect copy at our current speed. The increment to the next level was usually 2 or 3 WPM, but that small increase sounded like double the previous speed! My fingers would sit on the keyboard as if they were frozen; after a bit of time they'd begin to move again, hitting a letter here and there, and eventually I'd feel more comfortable at the newer and higher speed. So, I don't believe KM4LT was sending at three times your speed (how did you measure his speed?).

>When I asked him to please QRS (slow down) he blew me
>off and just started sending CQ on my frequency.

Let's analyze what probably happened. It's a given that we can send faster than we're able to copy. How much faster? When I was copying 10, I could push the key at 20!! So, KM4LT heard your CQ, and more than likely, matched his sending speed with your's. Then you ask "PSE QRS OM" which he interprets as you wanting him to send slower than you're sending! I too would have "flipped you off" by sending a CQ, but only after giving you a very long and deliberate "DAAAAAH DAAAAAH DIT DIT DAAAAAH DAAAAAH" (the Mother Of All Insults on the maritime bands).

>See...nothing special or almighty about coders....

Just make sure your sending speed matches your copying speed, Doug, and that probably won't happen again.

Hi David, the problem is that their is no agreed frequency for highway emergencies on the Ham Radio bands. I write and speak to clubs on this subject so that I have put much thought to it.

Yes, you are right, many hams will not respond to a call for help. Or maybe the repeaters you tried did not have anyone listening to them. Did you hear any converstions on any frequencies? And if so, did those people ignore your call for help?

I recommend that hams needing help do this, go to all of the frequencies, repeaters that might have people listening and then call for help in this manner: "This is KF6UMY needing help with a highway emergency" or "Can someone make an emergency phone call for me, KF6UMY?" Be prepared to do this several time, on several frequencies if necessary.

I have a Dejanews community that addresses these issues at:
www.dejanews.com/~hamradio911

What frequencies did you try and where was the help needed. I am in the Los Angeles area and we handle thousands of highway emergencies every year on 146.820- (no PL). Give me a call there if I can give you any

more info. 73, Bruce, N6TFS

Somewhat less effective?
>
>HOWEVER, it's as reliable as it was 25, 50, or 100 years ago.

It is not in the case a of radio as relaiable as a 100 ago I
don't thinbk we had much radio back then. so it more realiabe today
than then. but todays morse is also more realiable than say 1912 when
sprak gap was the rule of the day. Morse is not as realible as it
was. It is more realiable than it was

OTh it is relitive reliablity that is more interesting Morse
Code relitive relaiblity has declined sfairly steadily to point of
being less reliabale relitively speak than say the 1940's

> burned up piece of charcoal.......

Go here:

http://www.ebbsoft.com/

Or "Shotgun" it and do a net search for "HP-87".

Also take a look at:

http://www.hpmuseum.org/hp85.htm

Tucker usually has some, too. Most of the used equipment places
will have a few.

If you don't need the wide screen - consider the HP-86. Less
memory (64K) and an external monitor.

Good Luck!

Cheers,
Paul Grohe

People did have CTS in the past, it was called by other names. The reason CTS has become so prominnent is the spread of computers keyboards. Used to be, no one heard about the problem because it was confined to the typing pool. Now everyone uses a computer at home and aat work, all the time.

Source record: 151698

Set the character speed for 18 WPM if you will be tested by the ARRL VEs. Any others. find out how the code will be sent for the test, duplicate that character speed, and run the word speed about 2 WPM faster than the official test speed.

18 sounds fast if you are taking the 5 WPM, but trust me... first of all you need to be forced to hear the sounds of the characters, and not have time to count dits and dahs. Also, that is the way the code tape will be sending, Farnsworth at 18/5, or 18/13. The 20 WPM is just straight 20 WPM.

Try like hell to be prepared for the next higher speed, and take that higher test. If you don't make the grade, at least you will be warmed up and confident for the lower speed test. Remember... with multiple choice, you could pass just by being lucky and guessing intelligently. Go for it. Right now you are concerned with passing the test. Actual practical skill you will develop on the air.

I had a longer post almost ready to send but the news server connection went south on me and I lost it. This is the gist of it tho. Go with 18WPM character speed. get comfortable with code just faster than the test speed. Be prepared to take a higher speed test than what you need. Be well rested, calm, confident, etc as you go into the test site. Good luck and I'll see you on HF.

2686. Code learning: SuperMorse/Koch vs. CodeQuick

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-03 00:00:00 UTC
From: pje@haystack.mit.edu
Message-ID: <799j3r$ap1$1@nnrp1.dejanews.com>
Source record: 151700
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Hi all,

I'm just starting the code learning process. I've read a lot on these newsgroups about various methods of learning code. Being a serious amateur musician, I am well aware that learning something the wrong way is much worse than not learning it at all. So, since I'm at the beginning, I'm looking for advice from those who have gotten there already.

My goal is to go for 20 WPM right off the bat. (And, by the way, I am aware that if I wait long enough, I would only have to hack 12 WPM; however, I'm going to try for the Extra 20 WPM as it currently exists for personal satisfaction.) I have settled on two tools: SuperMorse with the Koch method (see http://griffy.nmt.edu/sara/sara/finley.morse.html) as Dave Finley describes, and CodeQuick (http://www.cq2k.com).

My question: If one trains with SuperMorse/Koch, do you even need CodeQuick? I haven't laid out any $$$ for CodeQuick, hence the REAL reason for the question :).

I get the feeling that at 20+ WPM, you're not going to have time in your brain to say "dog-did-it" or whatever the CodeQuick mnemonic is; you just have to know what the sound is instinctively. (This is in complete analogy to reading music: you have to read a measure or two ahead to become a good sight reader, which means the note translation process has to be subconscious.) So, if you are not under severe time pressure to get the test done at 12 WPM (say), it's better to build using the Koch method.

Please give me your opinions, either by email or by posting. If I get a sufficiently large response by email, I'll summarize for the group.

Thanks in advance,

Phil Erickson

Scott .... there is NO need to insist that everyone be capable
of copying TCP/IP packets in their heads ... it's FAR easier,
faster, and more effective to let a machine do the encoding and
decoding.

One of the most ridiculous aspects of the pro-code argument
is "We MUST insure that everyone is capable of using the most
primitive modes which can be encoded/decoded without any
assistance from machines." The entire idea that only doing things
"the hard way" by manual means "has value" is an absurd "principle"
of the PCA.

Many years ago in a little town called Launceston in
Cornwall there used to be an electronics goodies shop.
They used to go to rallies and sell all sorts of interesting
stuff, trouble is I can't remember what they were called
and want to find out if they're still around and pass on the
details to someone I'm trying to help. Any ideas ?

p.s. I don't seem to be very good at finding things with
search engines or Yell UK hence the silly questions.

Does anyone know the availability of any "dummy" AA cells?
(I've seen them in the past - they are plastic forms the same size of
an AA cell, with a metal strip connecting the top and bottom contacts -
basically a specialized jumper!).

I have a AA battery pack for a handheld radio (Kenwood TK-250) that has
spaces for too many AA cells (excess voltage would damage radio). I need
to insert two "dummy" AA cells to act as jumpers for these extra spaces.
Already tried to solder jumpers in place - can't do it due to the metal
they used for the contacts.

Thanks for any assistance and advice!

2699. Popular Communications slant and position

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-03 00:00:00 UTC
From: "David E. Shelton" <w4des@iolky.com>
Message-ID: <36b882e5.0@205.238.18.7>
Source record: 151713
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.amateur.policy

In March 99 issue of Popular Communications on pp. 8,9 a letter to the editor from "Stuart Lent" stated that he was upset. His reason, because he couldn't hear the launch communications relay that a local ARC in Florida does as a service to the amateur community. Then following this he goes on to blast all amateurs that operate CW stated basically we cause nothing but interference and operate QRO only. According to the article there were stations 2 kHz above and below him at 14.295 MHz. This is all too common for this magazine and its slant as anti-amateur radio and definitely anti-CW.

Shortly after this letter another letter to the editor another appears on p. 10 that is written to the editor from Vern A. Weiss, W9STB. This is the one that really concerned me. This amateur is pro-CW and states his position from the beginning. Well that obviously upset the editor who replies that CW is basically a waste of time and that it should be done away with ASAP.

This is the kicker though, the anti-CW letter from "Stuart Lent" has no address listed, but the pro-CW letter from Vern A. Weiss, W9STB, has the full address given too which I am sure caused this fellow amateur a lot of harassing mail and very little support from this unlikely amateur community supporter.

I would ask that if you are a SWLer or casually read Popular Communications magazine from the newstand as I do, or subscribe, please consider their obvious position and do as I will refuse to buy another copy.

Your advocating letting machines do the work means you're advocating appliance operation. Being an appliance operator is not one goals set forth in S97.1. Using high through-put modes must be balanced with the user's building skills.

I'd be interested to see what gear you've built yourself. How about placing your station on a web page? Being an engineer (without a college degree, though =:o), you surely must have built a considerable portion of your equipment. (If not, why not purchase soldering gear this weekend and try building something? You'll finally be satisfying S97.1.)

Horse poop, Cecil. Every broken microprocessor-controlled radio I've ever seen was unworkable due to some problem within the MP stages, not RF-related stages. And the failed component always turned out to be a custom-manufactured device - no longer available.

Doubtful. Most people don't know what ham radio *is* (most think it is
"CB radio").

The codeless tech license was responsible for a tremendous amount of new
growth in our hobby, as the license class tapped a vein of interested
people who otherwise would not have gotten licensed (whether those people
are 'good' or 'bad', depending on your viewpoint, is irrelevant, they're
there, and creation of the license class caused them to get licensed.)

But, like any mineral vein, the vein of potential licensees from creating
that license class may not be 'tapped out'. So, new licensees begin to
decrease.

A better question for analysis is: what is the rate of examinees compared
to pre-1991 numbers? My suspecion is that they are decreasing and will
achieve equilibrum with our pre-1991 numbers.

>Regardless of
>what you think Dick I dare say not many people who are now choosing to join
>our ranks do so out of love for CW or our past accomplishments.

I have two children in elementary school. Neither are particularly
interested in ham radio. Morse code isn't part of the equation either.
To them, there is merely nothing special about keying a microphone and
talking to someone across town. "Daddy, can I have the cell phone to call
mommy?"

Dear Editor,

There was a time when amateur radio provided a public service in training operators for military service, technicians for industry, fostered international goodwill and carried emergency communications. Just like hat making in Danbury this rarely is true any longer. The technology has long ago left hams by the roadside. Today amateur exams are so simple children who can barely read can pass the test. All questions AND the answers are published in multiple choice format. The examinee knows the actual questions and answers ahead of time. The average age of today's ham is well over 50 whereas when I was first licensed, in Norwalk, the average age was 27. Hams are still communicating at 1200 baud when internet users fly along at 40 times that speed. As far as international goodwill, most hams rarely ask a foreign station anything more than what his equipment is, they do not care about culture, lifestyle or anything that really matters. Hams usually want the "credit" for having talked to 100 or 200 or more foreign countries (did you know both Hawaii and Alaska are separate "ham" countries?). If you have a scanner listen to frequencies between 145 MHZ-148 MHZ and listen to the content of the conversation. These are valuable frequencies that other public service and commercial interests could use PRODUCTIVELY. Cell phones have replaced the need for most emergency ham communications in this country. Hams use many other frequencies for little more than a discussion of personal medical ailments. Hams are required to serve the public but in fact they are serving themselves almost all the time. Worse they cause interference to other services (like your TV) and they erect large towers and guess what, there is nothing you can do about it. The F.C.C. is too underfunded to respond to citizen interference complaints and the ham radio lobby (American Radio Relay League) has caused both state and federal governments to pass laws that prohibit towns from controlling these large antennas.

The frequencies that hams use are for the use of everyone not their personal fiefdom. It is time Congress conducted hearings and investigated whether ham radio has become the vast wasteland (a term that former F.C.C commissioner Newton Minow popularized).

Sorry to hear about your experience. Hope this doesn't sour you on the hobby. What I'd like to know is where were the "control operators" for these repeaters. It's my understanding that a repeater is supposed to be monitored by someone 24 hours a day.

Unfortunately, I've found that many of the newest fast PC's stumble
badly on either Morse Tutor, Super Morse, or CodeQuick. I recommend
staying with a Pentium 120 or lower to ensure proper operation of these
code programs. Otherwise, you may hear some very strange stutter-step
cw.

Hrm... depends on the people in your area. Around here, you need to tell people that you have an emergency, and you need to say what's going on, as well as identifying yourself properly. There are just too many situations with fake calls for help... a little bit of elaboration can help the situation tenfold. Of course, if you did tell people what was going on, I would go to the next club meeting and give the hams hell... nobody deserves to be ignored in an emergency.

Really, what is that I hear at the lower end of 160,80,40,20,15,10, 6 and 2
meters? For something that's dead it sure seems to be getting a lot of use.

What's DSP? Digital Signal Processor? Who is JPS?

Another note on the problem is that every 75 seconds it pauses for a split second or so. Also when I go out to the front of the house on our frontage road, about 600 fett away, there are some power and telephone poles along the road. When I walk between two of them I get the noise. The poles are about 500 feet apart, but the noise fades between the middle 300 feet until it's almost not there. When I get around 100 feet from either pole the noise picks up.

Todd Ellis wrote:

2714. Cell Phone Profanity

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-04 00:00:00 UTC
From: Jones <Jones@nomail.com>
Message-ID: <79dl7dhce4@news.orbitworld.net>
Source record: 151475

I can't remember the thread where the subject of profanity on a cell phone came up recently, but I just bought a new Audiovox dual mode portable today and in the rear of the manual is a page titled "WARNING":

"When using your cellular telephone, please note that the following offenses are punishable by fine, imprisonment,or both." One of the listings was: "Using obscene, indecent, or profane language".

It didn't cite any codes or statutes. I wonder if anyone has ever been charged. How would anyone know about cell phone cussing, if they're not supposed to listen to cell phone conversations in the first place? Anybody know if there is really such a law?

I guess I'd better confine my #%$@ cussing to Usenet...

Listen to the posters who are telling you to either precisely follow the tower manufcturer's base design for your specific tower and loading conditions *or* have a registered professional engineer with the proper credentials and experience in this field do that design work for you. Or both. The liability penalties for which you can be held personally responsible can be enormous if the thing fails. This is not an area for "experimentation" or "home brewing" or old wives tales or eyeball engineering suggestions passed around by the professionally unqualified.

2719. Trying to Find the Source of Noise on AM

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-04 00:00:00 UTC
From: Wayne Watson <mtn_view@sirius.com>
Message-ID: <36BA7E15.303737C8@sirius.com>
Source record: 151480

We moved to a new house in the mountains of California about 60 miles from Sacramento and live in a pretty rural area. I've recently discovered an annoying noise on the radio dial between about 750K and 820K. Unfortunately, there are a few stations in that range I'd like to listen to. The noise almost sounds like it is coming from a motor, and every 75 seconds it sort of hiccups and continues. Here's a little map of what I know about it so far:

```
A
* | 1 <- | = road - about 500 ft long from A
to B, 1000 feet from B to C
* | 3 *=power/telephone line - above ground
* | 7 n= number, i.e., annoyance level while
listening on AM radio (subjective)
* | 7
* | 9 ***********************************...

---------------------------------------------------------------- ...

B 9999977755533322| C1111100000000000 ...
F C to F and further are 2000 feet and beyond
|
| Distance from
C to D about 400 ft
|
E --------- D Distance from D
to E
```

Our house is at E and the power/telephone line cuts underground from C to D to E. There is little noise along this path, probably 0 on my scale. When one gets inside the house (E), the noise can be picked up again on the AM radio. It is very high (9) near the refrigerator, and present at about a level of 5 throughout the house. I haven't assigned any other numbers in the house because I've limited my crude estimates via listening to the AM band at 800 to areas I've been able to examine somewhat closely.

The sound is sort of an r-r-r-r-r-r-r-..., hiccup, r-r-r-r-r-.... Any ideas on what it might be or how I can further isolate it? To me it's beginning to sound like something associated with the power/telephone lines. However, it doesn't seem to be present beyond points A and F on my map above.

Gary,

Wasn't he a Radio Amateur? Besides separate licensing, he required a control operator to be monitoring at all times when the repeater was operating.

The only explanation I've ever heard of _why_ was "he just didn't like repeaters".

Doug Fitch <KD5FJE@webtv.net> wrote in message news:11158-36B69F9F-47@newsd-144.iap.bryant.webtv.net... ========== I never thought I'd write this, but I ust finished a CQ on 40M and was answered by KM4LT who came back at 3 times my sending speed....an etiquette no-no. When I asked him to please QRS (slow down) he blew me off and just started sending CQ on my frequency. See...nothing special or almighty about coders....all the more reason to do away w it. (I used to be pro-code and now I have shifted 180 degrees) There are too many very intelligent and knowleadgable techs out there to keep 'em off the HF voice bands just because they can't do code at 13-20WPM. ==========

I still don't see the hype about *doing away* with CW so that very intelligent and knowedgeable techs can have access to the HF bands, considering what is available to them without having to know any CW at all.

There is 23122 MHz (that's 23.122 GHz) of ham bands between 50 MHz and 250 GHz. If they were to drop any and all CW requirements and only had 1 class of license, and give full HF privileges to anyone that would give a total of 3.75 MHz more bandwidth to the no-codes. That is less than 17/1000th of 1% more than what is available above 30 MHz (read that as not needing CW). Plus we can use everything above 300 GHz.

With out knowing any CW at all, you can talk all over the world. You can use ATV (fast scan Amateur TeleVision). Packet. Satellites. Moon bounce. The list goes on.

Bill, there usually isn't a RO anymore. Cruise ships have them, and a lot of MSC ships, and yes, a few commercial ships, but on most ships the Mates and Master handle all traffic now. AMVER and WX are sent via SITOR, or INMARSAT C, and other communication is usually via INMARSAT telex. There is no longer even a "radio room". The gear will invariably be on the bridge. Typically it consists of a data controller, two notebook computers, the INMARSAT transciever and control equipment, an HF transciever, and at least two VHFs with at least one capable of DSC. Also a NAVTEX receiver. I walked more than one mate through his first SITOR link. Now, on top of the increasing burden of paperwork generated by ISO-ISM 9001, SOLAS, STCW, all the pub and chart corrections, overtime, inventory, requisitions, they also have to handle communications. So who the hell is standing the watch? Huh. We are looking at a reduction in safety, not only because there is no RO and nobody listening on 500, but also because the mate on watch cannot stand a proper navigation watch anymore.

The only training these guys have is a 70 hour course required by STCW, and their license, which is about halfway between Tech and General written exams in complexity. Maybe less. They are not taught any real maintainence or trouble shooting. No real knowledge of just how radio WORKS. But they can punch the hell out of that keyboard, and I guess that'sall anybody's worried about.

Nothing anybody can do about it now. Maybe we'll be lucky and there will never be a situation where there is loss of life because there is no RO on board.

Maybe not.

Personally, I like SuperMorse. Got me from nothing to 20 in less than two months. It is very customizeable and versatile, and will run just fine on an AT class machine. Also I am a registered user and wanna get my money's worth out of it, HI HI.

NuMorse also has a wide following. It is a native Windows program, and has a more up to date interface. The unregistered shareware version will not go past 10 WPM throughput though. However, it has a rather nice on-screen flashing light feature. Most other programs, to learn flashing light, you have to build an external interface. There are lots of other good programs out there if you look.

I would definitely go with a PC based learning system... If you are serious about the 20 WPM, set the character speed at 20 right from the start, and vary your overall speed as you learn. This will get you hearing the characters naturally right from the start. The "Dog didit" stuff might indeed slow you down, in view of your particular agenda.

There is a link to a good Morse site at my main website. Hope it's still good... Also there is a text FAQ file at my site that might have a few ideas you may wish to incorporate into your learning strategy. I like to help out, but hate to inflict the same long and detailed post on the regulars here every time a new or aspiring ham has a morse question. Those resources will touch bases that I might forget, too. Good luck!

You BOTH are sucking up to Pork Butt and the SORRY ASS excuses he's using! Mr. Whiten used the word NIGGER in the context of several other racial slurs including "porch monkey", "spear chucker", jigger-boo" and "brillo pad"!

Nothing was taken out of contect. The ENTIRE QSO was mailed on cassette tape to K1MAN. And it sure doesn't sound like joking around to me! N9GOR gets VERY upset and angry at Mr. Whiten's words!

2729. Improving Reception 800AM

From: Wayne Watson <mtn_view@sirius.com>
Message-ID: <36B99DC4.A6CC6D24@sirius.com>
Source record: 151526

I live in the mountains of California and would like to recieve 810AM, KGO, from San Francisco much better. I have the C. Crane Select-Atenna and it helps. We do have a local (5K Watt?) station nearby at 830AM and the signal bleeds into 810AM at times. To further aggravate the situation, since we move to a new location, there's some new noise around 750-850AM that sounds like r-r-r-r-r. I'm pretty sure that the noise comes from outside our house and within the neighborhood, maybe a few miles away, but don't know what it is or where it's really coming from. Suggestions?

>I do in the future in a similar situation?

Ashamed to have to say it, but you might get more
help on CB channel 19 these days. I came-upon
a major accident in the Nevada desert about
four years ago. It was about 8 AM on Saturday morning,
so lots of people should have been up.
I could hit three repeaters,
two of which covered metro Las Vegas. I had to call
"mayday" on all three to get a response, and then only
from an old grouch who acted like he could'nt be
bothered with people dying in the dirt. He did call
the police so help came, but it made me feel ashamed
and sorry. Several people were standing there watching
this ham operator call "mayday" with no response.

Now, I lived in Las Vegas for 15 years and met
many, many terrific people and great ham operators.
Perhaps this was just a bad day. But couldn't the
people or clubs who put up the repeaters afford to
have a cheap scanner tuned to it? One thing about
channel 19 on CB-- you'll always find someone there.

There is no magic formula. Trimming antenna's is basically a cut and try.
Moving it from the side mount to the top will likely change things. Which
way is another matter. Generally speaking a antenna mounted close to a
conductive device will cause it to show strange swr. This is due to either
capacitive effect or reflections from the surface. Thus the swr indication
may or may not be actually as bad as is being read. The placement of the
swr meter in the line will also effect a reading. So basically I'd suggest
you NOT cut it and try a different position.

Well, it depends on how much money you'd be willing to spend, but I'd get a used DSP unit, like the ones made by JPS. I use an NIR-10 (a JPS model) and when I flip a switch, all the noise goes away. You will need to have a radio that has an audio output, run it into the DSP unit, and then connect a speaker to it.
Note that you will prolly spend $100-$200, but the benefits are pretty good. They also have a unit that is used to combat AC noise. Check them out!

1. Because it is a International requirement.
2. The amateur SERVICE is expected to be ABLE to respond in an emergency,
thus REQUIRING ABILITIES and SKILLS in diversified area's of
communication. Morse Code ABILITY is one of these.
3. CW is FUN.

Dave:

I understand your frustration about the whole thing, but we train local folks around here (Raleigh, NC) to just say EMERGENCY when they need a call to 911 while on a repeater. "Mayday" is great if you know what it means...if you have an emergency, WHY ENCODE YOUR TRANSMISSION? Too many people hear "mayday" and start thinking about airline disasters rather than traffic accidents!

911 dispatchers around the country are trained to ask specific questions when they are called. If you call 911 and tell dispatch that you have a 10-50 with PI, you might get a "huh?"! I've heard it before. (Uncoded, that means motor vehicle accident, personal injuries at the scene.)

When the dispatcher asks you either "what is the nature of your emergency" or "where is your emergency located", they realize they are talking to the panic stricken untrained public. Getting on the repeater and calling "mayday" or "pan pan pan" or "SOS" (even in morse code) on a 2 meter repeater may result in what happened - nothing. I'm sorry you had that problem, but the more we train our operators to react to an emergency, the better off we all are - including the public we serve. That's why it is call the Amateur Radio Service, after all.

And lastly, let's all remember that the three most important things needed for emergency response are:
1. Training
2. Training
3. Training.

By the way - why didn't any of those three repeaters have a phone line attached so that you could call 911 yourself?

Richard Carroll wrote in message <79a24l$e8f$1@208.207.71.172>...
>
> It has been more than adequately established here

In YOUR opinon, Dick ... others disagree.

>that the
>reason that most code advocates believe that testing should
>be retained is that Cw as a mode on *HAM RADIO* is still a
>very viable and useful mode, still has a great many users
>today on the ham bands.

So what? Those who want to use it will learn it, even without
mandatory testing. Those who don't want to/have no intention
of using it need not learn it, just because others think they should.

>It is legimitately believed

The "legitimacy" of your assertion is widely disputed.

>that it
>is a necessary skill to be learned by all hams who plan to
>engage in HF operations

The "necessity" for all to learn it is also widely disputed.

>so that they can and will be able to
>use it at least a minimal level on occasions when it should
>be needed,

Such as? Please refrain from yet another, Independence
Day, Morse saves the world from alien invasion sort of
fantasy scenario.

>not only for emergency operations

Morse is hardly ever used for emergency operations. When
it is, its a matter of operator choice, NOT necessity. There
are FAR more efficient ways to pass traffic than Morse.
And, no emergency management agency that I am aware
of (and I've been quite active in emergency communications
for many years) considers Morse a viable solution to their needs,
nor do they have any plans to use it in any scenario. They want
tactical voice (FM/SSB) and reliable data communications

(VHF/UHF packet, PACTOR/CLOVER on HF, etc.)

>but for the
>prevention of intermodal interference to other ham
>operators.

That's absurd ... one need not be able to copy a Morse
transmission to recognize its presence and realize that
the freuqency is in use ...

> Yes, that's a concept that may not have been previously
>seen here, different from the old reason of 'avoiding
>interference to other services.' But anyone who operates the
>digital portions of the bands using CW today knows the
>reason for it. Many digital operators seem to neither know
>nor care that they interfere.

What about the CW lids who send "FU FU FU," strings of
dits, etc. in an attempt to jam digital transmissions?

While digital operators should be as considerate as
anyone else about not interfering with others, the CW ops
are NOT 'lilly white" either. This has been reported many
times by many people.

Once again, your arguments are so full of holes that they
couldn't POSSIBLY hold water. On the other hand, they
seem to hold BS just fine.

Right Cecil ... the pro-coders ignore the fact that they must use
a radio to transmit/receive even CW ... so their insistence that
the remainder of the process MUST be manual rather than
machine-assisted is even more ridiculous.

They seem to insist that eveyone work hard rather than smart.
That in itself says a LOT about where they're coming from.

Hi People
What is the skinny on the IC-2710H?? Any known problems?
Is the display easy to read both day and night? Is the extra wide rx out of the box or is a mod necessary? Can the chassis be left in the trunk with only the little front of the rig in the cab? Are there wx related problems if chassis can be left in trunk? (too hot or too cold) Any words of wisdom on this model will be greatly appreciated. I am also looking at the FT-3000, but considering saving up a bit more for the Icom. Thank you.

That's exactly the way I operate ... even though I never passed a
(faster than 5 wpm) code test. I see no reason to believe that
someone who had not passed ANY code test would inherently
behave otherwise. Certainly many who HAVE passed even the
fastest tests behave quite badly on the air ...

The point is, code tests are NOT an efficient lid filter ... NO test
can accomplish that ... only enforcement can deal with those who
choose to behave badly.

Baloney ... I'm advocating the use of modes which are capable of
outperforming OOK Morse in weak signal and impaired channel
conditions by a LARGE margin and are also capable of permitting
far more efficient use of our spectrum.

If we continue wasting spectrum by using antiquated, grossly
inefficient means of communicating to the exclusion of better
techniques, we'll lose our spectrum to someone who WILL use
it better.

>Being an appliance operator is not one goals set
>forth in S97.1.

I agree ... but most Morse users are appliance operators
using store-bought gear.

>Using high through-put modes must be balanced with the
>user's building skills.

Building gear that can outperfrom OOK Morse is NOT
complicated and should not stretch the capabilities of
anyone who was capable of building OOK Morse gear.

This endless littany of "modern modes are too complicated'
points to the true "dumbing down of ham radio" ... that which
is promulgated and promoted by folks like you who insist that
OOK Morse gear is all that the average ham could possibly
be capable of building. Modern IC technology makes it EASY
```

to build quite sophisticated gear.

The point is that you participated in a historical re-enactment, not
a practical, state-of-the-art means of transportation. Same thing
happens if you use OOK Morse on the air ... now, if you enjoy it,
fine ... nobody's trying to ban the use of Morse, just to eliminate
unnecessary testing for it. I doubt very much that the railroads
test their engineers on the are of stoking seam boilers anymore.

Sorry Charlie (or is it Baby Huey?)

There are no "amateur telephones" used on TexNet or any other networks that I am involved with.

We don't use any 'telephone' modems on any of the TexNet nodes. You know that.

You harp on these issue because others who don't know the facts might listen to you and that it isn't about what is good for amateur radio, but all about personal attacks against a few that you believe did you wrong at some point in the distant past.

I sure wish you would get your facts straight.

The networking technology that TAPR is currently working on doesn't utilize 'telephone' modems. It is all RF based. Radios talking to other radios. We aren't building telephone modems into any of our projects. No sir Huey.

Like the Spread Spectrum Radio Projects
http://www.tapr.org/tapr/html/taprfhss.html

or like some of the future 56K-3Mbps stuff that is in the pipeline.

or the PIC-Encoder project
http://www.tapr.org/tapr/html/pice.html

All RF based stuff.

But then again, when did you ever really worry about what is right over what sounds good to those that don't know what the real history or facts are.

Cheers - Greg Jones, WD5IVD

I agree with you..learning the code was not so easy for me 13 years ago and
since I never used it..I forgot it.. I now want to re-learn it so I can get
my General ticket and get on HF. I like the idea of being grandfathered into
a General if that passes but I aint gonna wait for the boys in the FCC to
make up their minds. To all that fear that the "No Coders" are gonna ruin Ham
Radio remember people will still have to pass a technical test..in my mind
this would be enough to keep the CB'ers out and keep Ham Radio clean. Ham
Radio is dying if you want to admit it or not..with the wide spread use of
the internet and voice over networks people can communicate without radio..If
we want our great hobby to continue on we must move with the times..I respect
anyone who is proficient with morse code and would never get rid of cw for
those who want to use it , but on the other hand the code requirement for
licensing keeps a lot of people from getting into ham radio....to some of the
snobby I would say this..if things keep going the way they are you won't have
anyone to have a QSO with...

How about:

Two CW operators in the middle of the RTTY area.
"You hear that RTTY?"
"Yes but is does not bother me, turning on the amp."

There's more but you get the idea. The entire band was open why
even bother to operate where another mode generally operates,
not "can they?" but "why would they?"

QRZ search of the call signs one Extra one General, observation
two lids. As Doug points out CW does not a good operator make.

False. Licensees were down a bit overall in 1998 from 1997. Losses
were heaviest in the Novice and General ranks. Tech continued to
account for most growth, but didn't grow enough to keep the overall
numbers on a positive trend.

>Our M/HF bands total 3.75 MHz. We don't need any more users down
>there than we currently have (and no commercial users are interested
>in our HF bands). OTOH, to get on V/UHF, no knowledge of code is

>guaranteed their safety against commercial interests.

There are no guarantees, but attempts against our 2m and 70 cm bands
have been turned back in recent years. Would they have succeeded if
we hadn't had the large growth in licensees since 1991 due to code test
free licensing? We can't know for sure, but it is a good bet that the larger
numbers didn't hurt.

A. Prose Walker was the head of the Private Radio Bureau during the
1970s. He imposed by bureaucratic fiat separate licensing for repeaters.
The requirements imposed were stiffer than those required for commercial
services repeaters. It was a paperwork nightmare, and stifled repeater
growth in many areas. This came at a very bad time because amateur
radio was just beginning to recover from the body blow of Incentive
Licensing, and VHF activity was just beginning to pick up steam.

They're doing their job publishing a fine magazine (which appears on many
news stands), and technical manuals. But what have *YOU* done? Why not
contact your local newspaper and invite a reporter to your shack? Write
up a feature article yourself and submit it for publication. Contact
your local TV stations and have them do a segment on upcoming Field Day.
Have your club set up a demo station at the mall.

All 600,000 of us should be acting as PR reps rather than depending upon
someone else.

Many towers are rated for freestanding use, including crankup towers.
The amount of and shape of concrete base required is provided by
the manufacturers, of course. Get the information from them.

As an example, a 51 foot freestanding crankup tower (the TriEx W-51)
requires a 30" x 30" by 60" deep concrete base. The tower is rated
for 6 sq ft of wind surface area. The base concrete is about 1.5 cubic
yards.
In it is embedded and plumbed, a steel base consisting
of three one-inch diameter reinforcing bars which contain welded-on 3/8"
mild steel plate brackets with each bracket having two 3/4 inch bolt holes
(two bolts
per leg, class V bolts). The base can be fabricated at home if you are
handy.
I dig my own holes with a shovel, so I can make all corners nice and
square
(makes the maximum amount of rigidity in undisturbed soil), and besides,
the digging is free this way, with minimum mess.

73,
Don, W6JL

Andy Moss <enzo@ibm.net> wrote:

:>How much (square feet) of concrete do I need to pour to hold up a 60ft
:>free-standing tower? How deep in the ground do I need to go?

I have a Rohn BX-64 free standing tower. Unlike the Rohn 25, 45, & 55
towers it starts off with a wide base section and ends up with a much
narrower top section. To withstand 75 mph winds with a 6 sqft load,
it calls for a roughly 6'x6' by 5' deep hole with lots of
reinforcement. About 5 or 6 yards of concret depending on how
much iron you put in for reinforcement.

I have a Tri-band Quad on top of it that has made it thru weather
which basically took out large tress on my property. I noticed that
there was quite a bit of sway during some of these storms but I have
to think that the flexability coupled with the stout base is what kept
it in the air.

Just my 2 cents worth,
Rusty77

I think that the larger numbers were instrumental in our defense of active amateur frequencies, Gary. In the case of the little-LEO threat, the larger number of hams who operate on VHF led to a larger number of comments to the FCC and others.

I have participated in the defense of a number of amateur allocations. In all cases, ARRL has based that defense on actual use of the band. If they want to put a new Part 15 device on 24 GHz (a pending proposal), ARRL cites the current narrow-band activity and pending Phase IIId activity as the reason to exclude those parts of the band from sharing with that Part 15 device. My personal take on the rest of the band was that the ARS might benefit from the availability of surplus 24 GHz digital link equipment, so they may make a viable sharing partner on part of the band that are currently not utilized extensively.

Of course, if you are doing any experimental work on 24 GHz high-speed data or spread spectrum, please send me some detailed reports so we can add your work to the reference circuits Zack Lau has compiled for all amateur allocations.

See http://www.arrl.org/pio/ for a pretty good snapshot of the results
of ARRL's Public Relations. Much of what the League does is to
coordinate the PR work of some of our 600,000+ hams.

It is much more effective for a local club to advertise a local class,
or to promote its work on a local parade, that it would be to do a
15-second sound bite on national TV.

Every one? Wow. How many have you seen? No offense, but if you've never
seen a MPU in a radio fail without damaging the RF circuitry, I have to
guess that you haven't worked on many microprocessor controlled radios.
I'll agree that RF circuitry fails more often, but MPU failures are not at
all uncommon. In my experience (17 years strapped to the bench for 40
hrs/week), the ESD type of failures you cite, where control and RF circuits
are damaged, occur far less frequently than the failure of the MPU control
circuitry alone.

Greetings!

Yikes!

Due to the Graphic Nature of the following, please excercize
discretion, Parental Guidance is suggested...

On Wed, 03 Feb 1999 16:45:30 -0500, While the Monitor displayed an
idea about "Concrete required" from 'Andy Moss <enzo@ibm.net>'. The
Keyboard responded with this:

:+> How much (square feet) of concrete do I need to pour to hold up a 60ft
:+> free-standing tower? How deep in the ground do I need to go? This is
:+> in a light-wind area and the antenna load will be about 2 square feet.
:+> Soil is clay. I'm thinking I can do my patio and tower all at the same
:+> time!

Are you thinking of using a slab to hold up the tower and that same
slab to hold up the patio deck?

Well, ok. But do you have a tower that can Free-Stand at 60 feet
without guying? I would worry more about the swaying and possible
frame collapse instead of concrete at the base for anchoring.

Concrete? Well, I would think of a percentage base, length into ground
versus length above ground. Since I don't know the width of the tower
base. I'd use at least 10% [or 6 feet] of anchor for this height. Less
if the tower base is made wider, or greater than 3 feet wide. Use
either Stainless Steel hardware, or at least use Galvanized. Threaded
rods in lengths of 6' into the ground, with possibly a little less in
concrete [5 feet deep] if you can use longer rods [3/4 - 1" dia] and
pound them into the ground.

It may be overkill, but when clay gets shifted, or wet for long
periods of time, not only does it settle, it can cause your Hi-Po
miracle antenna, to imitate another long-standing relic of a foriegn
countries claim to fame...;-) You may not only have Vertical and
Horizontal polarization with whatever you put up there, but a good
combination of both at another angle too...

For best results, taper the base wider than the top, to form a wedge
in the ground. This way, if shifting were to occur, the extra area of
the wedge will help keep the antenna upright.

:+>
:+> Also, I've seen a couple of towers that were bolted to the concrete in

:+> the ground via these large bolts - facilitating easy removal I would
:+> assume. Is this the way to go?
:+>
:+> Thoughts?

If you're thinking of a Tower, at this height, I'd recommend a
crank-up. Unless you've got other plans for the pocketbook. ;-) Then
you should look into a bottom section that allows the tower base to
tilt or lower down [pivot at the base]. You'll need a jig of some kind
to help bear the weight and help lower the antenna when you need to.
The bottom sections can be left in the ground, if you need to remove
the tower for any reason. It also allows you a means to erect the
tower, separately, after pouring and leveling the base for the tower.

Hope these suggestions help you figure out the mess...

Regards!

More than you think Dick in fact If everthing goes right with the new set up I am building I will be on the air everday using PSK-31. I even plan to do a little back-scatter work using the mode in the next couple of months. How is your preparation for using the mode coming Dick after all it has all the advantages of Morse and lets you send at 50 WPM with out having to learn code.

I monitored a conversation between Japan and New York last night that lasted over ten minutes with solid copy. I went through the rest of the bands and did not find any voice or CW contacts being made to that part of the world. the best part is they did it in a high noise enviorment. I have worked four or five stations through out the country just using the VOX setup. Maybe we can make a contact soon.

Hi,
I am putting together a "Call Book" of folk who use a Motorola
DSP56002 EVM for amateur radio purposes. The list currently
has almost 40 callsigns. I have names and email addresses for
all but a couple of them, but won't pass any of them out without
individual approval.

You can check the current Call Book at:
http://members.xoom.com/ZL1BPU/MT63/Users.txt

If you'd like to be put on the list, or want to be sure that you ARE on
the list, or I have your details wrong, send me an email.

I would PARTICULARLY like to hear from anyone developing software
for the EVM for amateur radio.

You will hear many of the EVM users on the air, running:

PSK31 (excellent person - person RTTY replacement - very sensitive)
MT63 (awesome fast indestructable multi-tone wideband HF mode)
Feld-Hell (traditional ASK Hellschreiber, excellent on higher bands)
MT-Hell (frequency domain Hell with great rejection of QRM and QRN)

73,
Murray ZL1BPU

The Bakers <nospam@dont.even.try> wrote:
>So much for CW as an entry requirement to screen out the less worthy, I
>guess.....

True. Even the riff-raff can learn it. But it is a worthwhile barrier
to insure our precious 3.75 MHz of M/HF spectrum isn't overrun with
600 kilohams.

>What possible reason could remain which requires passing a CW
>test in order to receive an amateur radio license ?

As communicators first and foremost, you surely agree that all the
world's hams should have at least one mode in common. At present,
the one mode all HF-licensed amateurs do have in common is the CW.
Phone won't work as an international mode due to differences in
languages, but we do have enough CW prosigns so that a meaningful
QSO can take place via code regardless of the language an operator
speaks. Yes, a digital mode such as packet could become the interna-
tional standard by using the CW prosigns, but until such time that
every ham worldwide has the ability to build and maintain such equipment,
CW will remain the common mode.

Daily worldwide comms don't normally take place above 50 MHz, so
the common mode up there can be chosen on a national level; for
us it's of course FM phone.

Hope that helps, Baker.

The plate is an identifier to emergengy personnel in case of an emergency situation. In N.C., you have to certify that you have equipment capable of moble operation before the plate is issued (1/2 of vanity surcharge). It is viewed as a source of identification. Why would anyone get so upset about this?????? -+<([Rick])>+-

If you have a newer car with tinted windows, your high swr is most
likely due to the metallic content of the tinting materials used in
making the window glass. I suggest you find someone who has an
antenna analyzer such as the ones MFJ makes and check the impedance
you are seeing. Also, be sure you do not shorten the coax which comes
with the antenna as it is an integral part of the antenna design.

>That's why, when you visit a model
>railroaders's layout you never see steam in use as a motive force!

Close, but no cigar, MB.....

"There's nothing like it, says Dick Dabney: sitting back as the sun goes down and watching the train emerge from the distant tree line, chug-chug-chugging, steam belching from its smokestack, wheels clacking on rails.

"Approaching a crossing, the locomotive blasts out two longs, one short, one long: the signal that traditionally tells everyone in the vicinity to back off.

"No, it's not a scene from a movie or an old memory, it's here and now, an actual train steaming across a section of Chadds Ford, Pa--a train that's real in all respects except that it's only about one twenty-second the size of its venerable ancestor.

"The whole scene--trains, tracks and tunnels--is, in fact, Dabney's creation, a layout that winds in a 724-foot loop around his back lawn and represents the hottest trend in model railroading--garden railways...."

So, you're saying you don't use any machines, just your "given senses", eh?
Then you must have antennae sticking out of your head to sense RF directly.
All radio communications uses machinery. More sophisticated methods
often use more sophisticated machinery. You don't have a case unless you
are asserting that you start with unrefined ores. A vacuum tube is a machine
as certainly as is a microprocessor. One is more sophisticated than the other
of course, but not necessarily harder to learn to apply. VLSI has made the
functional blocks of our systems larger, but a vacuum tube is an appliance
too.

>I'd be interested to see what gear you've built yourself. How about

>this weekend and try building something? You'll finally be satisfying
>S97.1.)

Part 97.1 tells us to develop electronic communications expertise and
advance the state of the art. It doesn't exhort us to regurgitate yet another
tired old MOPA. Your idea of SOTA seems to be stuck somewhere in the
stone age of radio. Most of the interesting advances these days are done
in software/firmware running on VLSI. For a university math instructor,
you seem to show a strange math phobia when it comes to amateur radio.
Why not open a modulation and coding textbook or a DSP textbook and
learn something about communications systems developed since 1950?
It's mostly just multiply and add, honest, you should be able to handle it.
Then *you* might start satisfying 97.1. Regurgitating yet another tired old

MOPA and inefficiently modulating it with an encoding abandoned by the rest of the communications world isn't getting it done.

Our great ARRL council tells us we aren't going to get anyone interested in ham radio by just letting it sit there as the stone upon the earth. Why then no newspaper ads, why no internet banners ?

Is complaining about CW the only solution the unimaginative pale face can think of ?

Our fathers tell us to get the message out. The people who does not tell their story vanishes like snow before the summer sun. So it is with the hobby that doesn't advertise, the service that hides in the lengthening shadows of winter.

You could stand on a corner in the white man's city and hand out tickets and no one will care. CW is not what will decide the "fate"" of ham radio- the lack of a public relations campaign by ARRL will do more harm than an "antiquated" CW test ever will. The ways of our elders have stood the test of time. Do we now presume to sit by the great Council Fire and throw so much dirt upon their bones ?

I am Dances with Pigs

Fitting, indeed. The rest of the world has abandoned this primitive mode of communication...but we can still find it in the requirements to become a ham radio operator. Just another reason why ham radio is dying. Zzzzzzzzzz.....

Just for a short rant...

Popular Commincations is, in the colloqualism of my peers, beginning to suck. Same old tired scanner articles (Who the hell cares about itinterant frequencies?), same old crap about antennas ("Dipoles Revisited", and such). Not worth what I pay for it. And the SWBC schedule bit in the middle? Useless. MT, on the other hand - THAT is a useful publication! Plenty of good, useful frequency - and - schedule stuff...decent little simple homebrew articles....Cheers to MT. No cheers for PC.

> look it up on the Morse code chart. :-)

This is not unreasonable for someone who doesn't know Morse code.
It certainly would be better than no communication. Perhaps an
easy to learn procedure for such should be established in the
event that such an infinitesimally small probability might happen.

Sounds like poor military training. If you're trapped in a vehicle that was
leaking fuel, turning off all the electrical circuits would be the first
concern, especially if a witness is there to pull you out and go for help...

**It's a hobby so the impetus to "scan for emergencies" just isn't on the
license we carry. Best you get a cell phone so you can dial 911 and "ask
someone who gets paid to listen". Sorry to put it so bluntly but you do
cover the bases this way.

> a major accident in the Nevada desert about
> four years ago...<snip> I had to call
> "mayday" on all three to get a response...<snip>

**One very viable option is to know the phone patch repeaters in your area.
Ours, K7LIX is on 146.64 and covers the local dialing area just fine. It
is OPEN, there is NO PL. Anyone can access it any time of the day. Even a
traveling ham can carry the repeater directory with them and look for one.
There is no time out when you dial 911. Of course, the trouble is in
finding an open patch on an open repeater. Shame on any ham or
scanner-phile who fails to act on an emer. request though. What a shame.

Hmmm, as far as LV is concerned, why not convince Art Bell to do a segment
on emer. comm. for the area? Get something started David!

Just to keep everyone up to date on my CW crash course. I'm using Ham University and I've learned about half the symbols. My early progress was fast, but as you learn more symbols things slow down.

Oddly I find the longer symbols easier to deal with, perhaps there is more time to recognize them before the next one comes along. Two 'E's in a row followed by a 'T' can be rough, while a '.' is like a vaction.

I don't think I'm going to make my Monday deadline (the date of my test) so I'm wondering if I should put off the test, or just wing it with what I've learned so far.

Lets see. Up in the mountains, probably many miles from the repeaters using a handheld with an output of perhaps 2-5 watts into a rubber duckie(?). Don't overlook the possibility that you might have had enough power to bring up the repeater (50-100 watts and a decent antenna) and could hear the repeater (more power coming back to you), but not be readable yourself. It's hard to understand static. What do you do? Give what help you can and get somewhere where you do have coverage?

BTW, I'm not sure I would consider needing a tow truck a life or property threatening situtation. Unless perhaps the car was in danger of being hit by other vehicles. No mention of needing an ambulance which I would consider an emergency. But I'd probably respond to a call for a tow if I could help...

Wayne,

I went through something similar just a few months ago. The interference is different, but then again there are many different potential sources.

I first blamed the cable company, and even placed a few calls. I did some rf sniffing inside and outside of the house. I could hear the noise in the house, and out side it peaked near the utility poles.

In the end, upon the suggestion of several folks on the news groups, I started unplugging devices that I had in the house. It turned out to be the battery charger for one of my handheld amateur transeivers.

I would suggest that you do the same. Now days, there are a lot of electronic devices that we bring into our homes that have the potential to cause this problem.

Good luck.

<--snip-->

As far as using a "legit" sounding ID, in this area everybody knows
the users of the emergency & safety frequencies and would be spotted
immediately! The law says any frequency in an emergency but not with a
false ID to keep the heat off you! There are amateur operators out there
that have legal access to the emergency frequencies that ought to be
actively listening to both bands. So we who are on both sides of the
radio *fence* need to stand up use our radios to help whenever possible!

Yeah, yeah, yeah. I have three computers just sitting around eager
for something fun to do. I don't own a key. Hence, it requires more
equipment for me to do Morse than PSK31.

> For PSK31, one needs a transciever-with very narrow filters,

Not true. Most people are using traditional 500hz filters (you know, the
kind that people use for Morse). Some even just use normal SSB filters.
Since PSK31 has its own filtering built in, the only real problem is losing
significant bits because of excess noise in the passband. That limits the
A/D resolution.

> a computer (a fast one at that for it to work well), a sound
> card, all the IRQ's & DMA's etc all lined up and working,
> and that's assuming that Windows 95 is working properly,
> which in itself can consume most of a given day.

Presumably you are posting your messages using a PC. I'd bet that it is fully
capable of running PSK31.

My last sound card cost me $5.99. My last computer (built a few days ago)
cost me about $600 brand new, and is WAY more than you need to run PSK31. If
you couldn't haggle yourself a decent computer for < $200, you aren't working
at haggling, or are stuck in a mode where you think older computers are worth
something.

> PSK31 is a neat mode, but not without it's drawbacks. It

> work at it.

Have you tried PSK31 Dick?

The tuning indicator allows you to precisely tune to the peaks in the signal using a visual indicator, and are very effective. Because the tuning indicator integrates, it can visually indicate the presence of the carrier well below what humans can normally detect. The phase indicators also allow you to needle your frequency up and down by a hertz at a time.

Tuning just isn't that much of a problem. Short term frequency stability is probably a greater one.

> CW, on the other hand, well, just find another CW station
> and start sending. If you can hear'em you can work'em. Easy
> as falling off a log.

With PSK31, if you can't hear them, you can still work them.

One honest disadvantage for PSK31 for American hams would appear to be the fact that it uses Varicode, which is not on the list of approved codes by the FCC for use on HF frequencies. It goes to show just how out of date FCC regulations on emissions really are...

2828. An answer to my request to find K6PHP callsign... Can you believe it?

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-05 00:00:00 UTC
From: "Jack Rhondeau Jr." <jackr722@ix.netcom.com>
Message-ID: <79fcur$16s@sjx-ixn10.ix.netcom.com>
Source record: 151428

I would like to say thanks to those who responded with an answer to my request to find a callsign for my neighbor. He also appreciated it...

I received six responses from very nice people, one who explained another method to use to find callsigns which I gave to my neighbor.

I did receive the following message this morning that really bothered me since my request had no ulterior motives or reasons other than what I expressed. If this is a legitimate response, I think the woman has a problem...

------------------------ copy -----------------

It took less than 30 seconds to find W6PHP in 6 different callsign search

engines I used. I can't fathom what problem you ran into.

Most hams would know how to get the address information in a number of avenues

both on the Net and elsewhere.

There seems to be a few holes in your story so I won't help you in your quest.

A friend of mine had ex-wife problems. She was a flaming mental and he had no

legal reason to provide his new address to her. All the knew was his ham

callsign. She was given the FCC license info for his ham license by an friend

on-line. She found his house and was caught setting fire to his car. She was

caught because they noticed flames coming from his new wifes car.

Just figured I would share that. Good luck.

If you have not found you desired info yet, you could do it yourself very

easily, and not knowing your intentions since they were not spelled-out in your

newsgroup posting, I doubt you will get much help...certainly none from me. Bye

I have seen towers fail due to inadequate foundations. Large towers
nearly always buckle as they collapse, so it may not be immediately
obvious that the buckling occurred due to a shifting foundation, but it
often is due to that. With short towers (and trees) it is often immediately
obvious that foundation failure is the cause, just look at the root ball
sticking in the air of a blown over tree to see this.

>stamps approving that crap.

Heh, fellows with PE after their names can be dumb too. Credentials
are no guarantee of competence. But PEs who screw up enough lose
their certification, or can't get any carrier to insure them, which amounts
to the same thing. They are *liable* for the things they sign off.

> Meet or exceed the manufacturer's spec's and you will never have a
>problem.

Good advice in general. You usually won't have a problem using a base
that's too large or too deep. But even here there are cases where you
have to be careful. Have you ever seen a swimming pool float out of
the ground? Too much displacement for its mass. An analysis of soil
mechanics can be important. It can be especially important in earthquake
prone areas where the soil can liquify during a quake.

>How about G7D?

I put on my ITU emissions designator glasses and looked at
this yet again. I now think it is J7B. The subcarriers are not
phase modulated onto the main carrier, so G is inappropriate
as the primary designator (G would be Ok if there were only
one carrier, IE as in PSK31). The subcarriers are themselves
phase modulated, but that's irrelevant to the primary designator.
7 seems correct for the second designator since there are multiple
subcarriers. The third designator is B rather than D if the useage
is intended to be human readable text rather than computer data.

I don't mean to sound smug Dave, but if I heard someone say "mayday" on an amateur radio repeater I would be inclined to think that we had an unlicensed operator or a crackpot on the frequency. I would be loathe to ignore such a call, but I would also have some trepidation in responding to it. Mayday is something pilots might say on a commercial or military aircraft frequency if they had an engine on fire or something. Perhaps it is also something someone might say on Citizens Band channel 19. But on an amateur radio repeater it is customary to give your callsign, ask for a control operator, and state that you have emergency traffic. I expect that if anybody was around, they would gladly respond quickly and helpfully to that sort of call. I could be wrong, but I doubt the ARRL Operators Handbook recommends calling "mayday" on an amateur frequency.

I've been listening to SW for about 20 years. I got my first SW radio when I was 9 and I loved listening to the english language staions from all over the world. I just recently bought a couple of RS/Sangean World Band Radios and have restarted my listening in ernest. I know about the CW that's still being used on the lower badns but I hear more ragchewing than I do teletyping these days. With the ever increasing technology, what's the purpose of stressing such a system that is taking up bandwidth that could be used for other types of communication. With the FCC auctioning off the airwaves the Ham community is going to end up with only a small area to operate in unless they start doing something about it and make it a hobby that the computer techno kids could be interested in.

A non-Ham's opinion. But then again, I could be wrong

Hi John OM,

Good to see your real-world comments on hiring "professionals".
There seems to be this almost childlike trusting and blind confidence
among
so many people, that if you hire someone with the "credentials",
you will get expert and accurate advice. Or if you get a 'permit' and have
something 'inspected', that that assures quality. It does not.
As a prudent person, (and an electrical engineer) I would not even
blindly trust a physician's judgment, and likewise a Professional Engineer.
The only safe way I know of to hire expert advice is to do a lot of homework
on your own so that you can at least know the questions to ask in advance,
to test the validity of the advice you get, or the apparent knowledge this
person
has about the subject. To do otherwise, you are just totally in the dark,
and
ripe for plucking, as the saying goes. This goes for any purchase, of
course,
not just technical advice. There are a lot of people to take your money
out
there, but very few real 'experts', unfortunately.

73,
Don, W6JL

FCC DISMISSES EXTRA-CLASS APPLICATIONS; CONTINUES INVESTIGATION

While it continues its investigation into alleged "irregularities" in the administration of two exam sessions in Pennsylvania, the FCC has dismissed the pending Amateur Extra-class applications of four individuals. Letters went out in late January to Elmer Smith, N3UNR, of Effort, Pennsylvania; Kenneth Sharp, AA3RU, of Boyertown, Pennsylvania; Philip DiGenova, N3UNS, of

Bartonsville, Pennsylvania; and Wayne Bowden, formerly AA3RT, of Millsboro, Delaware. The FCC last fall had set aside the four Extra-class grants while it looked further into the matter.

"The Commission discovered irregularities in the administration of the examination by the Volunteer Examiners," advised FCC Legal Advisor for Enforcement Riley Hollingsworth, K4ZDH, in letters sent January 27. "Serious questions about the examination process remain, and therefore your application for an Extra Class license has been dismissed." The FCC plans to continue its probe into alleged testing irregularities at the two W5YI-VEC sessions, including allegations that examinees might have been coached or given test answers.

Hollingsworth advised the four applicants that if they still wished to upgrade, they would have to take a new exam under another VEC and VE team. But he cautioned three who took their exams at an October 6 session in Warminster, Pennsylvania, that "additional issues" about the initial exam session "may be raised at that time."

In addition, Hollingsworth told Bowden that the FCC had information that he had been operating as AA3RT after the four applications had been set aside by the FCC last November 10 pending a final determination. Prior to the October 4, 1998, examination session in Spring City, Pennsylvania, Bowden did not hold an amateur license. "You are cautioned that such operation is unlicensed, and will result in monetary forfeiture," Hollingsworth wrote. "It would also seriously jeopardize any future applications to become an Amateur Radio Operator."

In the November 10 letters from the FCC, all four applicants were asked to return their Extra class license documents and Certificates of Successful Completion of Examination (CSCEs). Bowden allegedly still had not done so as of January 27, and Hollingsworth said the FCC would not process any future applications until he did. As a result of the latest FCC action, Smith and DiGenova were formally bumped back to Technician class, while Sharp was returned to Advanced and h is former N3TPN call sign. The AA3RT call sign no longer appears in the FCC database.

BOARD SUPPORTS LEGISLATIVE AGENDA

When the ARRL Board of Directors met last month in Houston, Texas, it adopted a slate of ARRL legislative positions for the 106th Congress. Among several others, the Board approved a resolution to support legislation that would preserve and protect amateur access--on a primary basis--to existing Amateur Radio and Amateur Satellite Service frequencies "as a natural resource for the enjoyment of all properly licensed individuals." The Board also expressed its support for federal preemption of telecommunications regulation, "including strengthening and improving the ability of the FCC to promulgate and enforce reasonable regulation of transmitter and antenna issues."

The Board also said that spectrum auctions should not be used as a means to offset specific budget items, and that the ham bands should be exempt from

auction or reallocation to commercial services.

The Board also resolved to:

* support legislation permitting the FCC or its Administrative Law Judges to issue summary suspension of Amateur Radio licenses in cases of repeated and willful misconduct. The League also expressed support for "higher levels of funding to the FCC and other legislation as necessary to support broader enforcement activities."

* support legislative or regulatory measures exempting hams from annual fees, "unless such fee provides for services or benefits to the Amateur Radio Service."

* support requiring the FCC to develop and implement effective mandatory standards for radio frequency susceptibility of consumer electronic devices.

* favor traditional values and regulatory measures that promote Amateur Radio operation, licensing or spectrum allocation, and oppose measures intended to deregulate Amateur Radio "to the extent that the Amateur's unique ability to contribute would be damaged by commercial interests."

* support legislation to raise the current ceiling on reimbursement for out-of-pocket costs for individuals or organizations that provide or coordinate volunteer license examinations to $10, to be adjusted annually.

* oppose the expansion of prohibitions on radio monitoring beyond those that now exist to protect the privacy of services that interface with wireline networks.

* urge Congress to support funding, legislation, and other measures to maintain "a healthy and robust Military Affiliate Radio System."

* oppose legislation restricting the siting of commercial telecommunications facilities unless such legislation reflects the legitimate needs of all telecommunications interests.

* support the statutory exemption of reasonable Amateur Radio antenna and support structures from local ordinance and covenant restrictions.

ARISS MEETINGS STRESS COOPERATION

Space officials from the US, Russia and several other countries gathered in Houston January 21-27 to continue plans to put Amateur Radio aboard the International Space Station. The effort ultimately will provide Amateur Radio with a permanent berth in space aboard the ISS. The so-called "Amateur Radio ISS accommodations meetings" at NASA's Johnson Space Center included a representative from Energia, the Russian space company that is building portions of the ISS. The Houston sessions focused on finalizing the design of the "initial station" ISS ham radio hardware. But perhaps even more important, the Houston meetings helped to clarify and firm up the role of the multinational Amateur Radio on the International Space Station (ARISS) program within NASA and Energia and highlighted the spirit of cooperation among the ARISS partners.

Initial station amateur hardware--primarily hand-held, dualband transceivers--will get to the ISS aboard a NASA shuttle. NASA has subsidized the NASA/Energia-required flight qualification testing for the initial station gear. Additionally, the agency developed the safety analysis package for the ham equipment and oversaw the actual testing and flight-preparation activities for the ham hardware. Both NASA and Energia have agreed to support astronaut space walks required for antenna installation work aboard the ISS.

Frank Bauer, KA3HDO, represented NASA, ARISS and AMSAT-NA as one of the ARISS international partners. Sergej Sambourov, RV3DR, represented Energia, AMSAT-Russia and ARISS-Russia. Bauer called the meetings "extremely successful" and said he was impressed with ARISS's "teamwork, camaraderie and cooperation" during the NASA-Energia meetings. "Together we share a common vision to develop and operate a multifaceted Amateur Radio station on ISS," he said. Bauer said the ISS ham station "will be a great recreational outlet for the on-orbit crews, an exciting DXpedition station for hams on the ground, and an outstanding educational outreach tool for students."

Sambourov, who's chief of Energia's Cosmonaut Amateur Radio Department, confirmed the availability of four dual-use antenna feedthroughs on the Russian service module to support Amateur Radio and ISS video during space walks. According to Bauer, Sambourov expressed a strong desire "to work with the ARISS international partners to develop a single coordinated Amateur Radio station on ISS."

Bauer said that NASA officials at the meetings were pleased at the high level of flight hardware expertise and on-orbit operations knowledge ARISS was providing to NASA and Energia.

The initial station includes 2-meter and 70-cm hand-held radios, a packet radio system and power supplies, provided by the US team; a digitalker, designed and built by the German team; antenna feedthroughs, power and space accommodations provided by the Russian team; and an antenna system developed by the Italian team. The design was solidified during an ARISS meeting in Surrey, England, last July.

The multinational ARISS developed more than two years ago, in part out of the need for a single, international focal point to coordinate Amateur Radio development and operations for the ISS. ARISS is composed of IARU and AMSAT representatives in Russia, Italy, Germany, England, France, Canada, Japan and the US.

In addition to Bauer and Sambourov, the initial station ARISS team attending from various IARU and AMSAT groups at the meetings were Ron Parise, WA4SIR, and Lou McFadin, W5DID (ARISS-US hardware team); Matt Bordelon, KC5BTL (NASA and ARISS-US); Thomas Kieselbach, DL2MDE (ARISS-German hardware team); Alberto Zagni, I2KBD, Fabrizio Bernardini, I0QIT, and Luca Bertagnolio, IK2OVV (ARISS-Italian hardware team).

In the wake of the Houston sessions, ARISS repeated its request for proposals from the ham community for follow-on Amateur Radio hardware. The ultimate ISS ham radio complement--Phase 3--will include equipment to

operate from HF through the microwave bands with SSB, CW, FM, packet, ATV, compressed ATV, and SSTV capabilities. The German team also will supply a full-duplex repeater.

FCC'S HOLLINGSWORTH IS NET GUEST

The FCC's point man for Amateur Radio enforcement, Riley Hollingsworth, K4ZDH, put in a guest appearance January 29 during a session of the South Carolina Single Sideband Net on 75 meters. "They contacted me and asked me if I'd take a few minutes to talk with them," said Hollingsworth, who's a South Carolina native.

Hollingsworth said he told those gathered for the net "where we've been, where we're going, and what we're trying to accomplish" in terms of ham radio enforcement. He said he expects to return to the airwaves from time to time and welcomes invitations from other organized nets. (His e-mail address is rholling@fcc.gov.) Hollingsworth's unannounced and unexpected appearance on 3894.5 MHz January 13 to discuss compliance and enforcement created a stir within the Amateur Radio community.

NEXT SAREX FLIGHT DELAYED AGAIN

The only Space Amateur Radio EXperiment (SAREX) flight scheduled for 1999 has been delayed yet again. NASA sources say the STS-93 shuttle Discovery mission--originally set for January and subsequently delayed until March, then April, then May--now has been bumped until July 9.

An official announcement was pending. Schools on the schedule to have their students talk to the astronauts via Amateur Radio will be contacted. The postponement will allow TRW Space and Electronics Group to evaluate and correct a potential problem with several printed circuit boards in the Chandra X-ray observatory, a Discovery payload. The problem has been traced to poor conductivity between different layers of the boards (ie, through-plating), according to NASA, which has directed TRW to remove and replace the boards in the main unit.

The boards are made by B.F. Goodrich Aerospace. Reportedly, some 100 boards are involved.--NASA and other sources

MOONBOUNCE PIONEERS JOHN DEWITT JR, N4CBC, AND HANK BROWN, W6HB, SK

The man who first bounced a radar signal off the moon--John DeWitt Jr, N4CBC (ex-W4ERI)--died at his Nashville home January 25, some 53 years after making radio history. A few days earlier, on January 21, the man who engineered the first Amateur Radio Earth-Moon-Earth contact in 1960 with hams on the East Coast--Orrin "Hank" Brown, W6HB--died in California. Both DeWitt and Brown were 92.

While awaiting US Army discharge following World War II, DeWitt and his Project Diana team--named for the Roman moon goddess--got the OK from the War Department to investigate the possibilities of bouncing a radio signal off the moon. At the time, DeWitt was a lieutenant colonel assigned to the Signal Corps Laboratories in Ft Monmouth, New Jersey. Project Diana achieved

success January 10, 1946, when the team detected the radar signals reflected off the moon's surface. The event was trumpeted in the news media of the day as a major achievement, proving that radio waves could penetrate Earth's atmosphere.

DeWitt later returned to Nashville and broadcasting, eventually becoming president of WSM radio. Coincidentally, Brown also did stints in radio at KPO and KSBR. Brown later worked at Eitel-McCullough and served as Eimac's marketing director for 20 years.

Brown had been licensed continuously since 1923, and was a League member for nearly 50 years. He also was a charter member of the Santa Clara County Amateur Radio Association. In 1961, he received an ARRL Merit Award. He was a founding member of OSCAR and a project leader for OSCAR-3, the first real-time repeater satellite of any type.--thanks to Julia Brown Sneden and Bob McKinley Jr, W2OMR; some information from press reports

HQ STAFF TO SUPPORT SCHOOL CLUB ROUNDUP

ARRL HQ staff will support this year's School Club Roundup, operating on HF from Hiram Percy Maxim Memorial Station W1AW. The SCR takes place February 8-13 (see related story, "Mir/APRS School Club Roundup" in the "In Brief" section, below).

"Special emphasis will be put on contacting youth groups, especially school clubs," said ARRL Field and Educational Services Correspondent Dan Miller, K3UFG. Depending on propagation and the availability of volunteers, watch for W1AW between 1600 and 1700 UTC on the suggested SCR frequencies (see http://www.arrl.org/contests/announcements/99/scr.html). Details for suggested exchanges can be found at the Web site or in January 1999 QST, page 92 or http://www.arrl.org/contests/months/jan.html.

Each day of the event, HQ staff volunteers will spend their lunch hours at W1AW making contact with as many youngsters as possible.

Miller said that reports from the recent Kid's Day activity and other ham activities involving youngsters indicate a strong desire by young people to learn more about Amateur Radio (see "Kid's Day!" QST, Jan 1999, pp 46-47).

"This is our way of saying thank you to all those folks who've gone the extra mile to put together a youth group Amateur Radio Station," Miller said. "Many of these groups have also registered at our new Youth Skeds Web site, http://www.arrl.org/ead/youthskeds/, to set up schedules to contact other youth groups via Amateur Radio."

For more information, contact Dan Miller, e-mail dmiller@arrl.org; tel 860-0594-0340.

SOLAR UPDATE

Sun watcher Tad Cook, K7VVV, Seattle, Washington, reports: The geomagnetic field has been very stable over the past week, with many periods when all of the planetary, Boulder and even high-latitude K indices were zero. Average planetary A indices, which are based on the 3-hour K index over 24 hours,

were down five points to 4.4. At the beginning of this month, the Boulder K index was zero for 24 hours, resulting in an A index of zero for February 1.

Unfortunately, we not only saw low geomagnetic activity, but declining solar activity as well. The daily sunspot number on January 30 was only 29, and it has not been that low since October 4 when it was 21. Low activity like this means poorer conditions on higher frequencies.

The average daily solar flux for January was 142.4, a drop of almost eight points from December, which was 150.1. It is still a higher average solar flux than any month other than December, 1998, in the current solar cycle.

For the near term, look for better conditions and a rising solar flux. Predicted flux values for February 5-7 are 110, 115 and 115, and the predicted planetary A index for those days is 10, 8 and 8. Expect flux values to rise to around 120 by February 9, 130 by February 11, 140 on the 12th, 150 on the 13th, and remain around 160 February 14-16. Look for unsettled to active geomagnetic conditions around February 9-11.

Sunspot numbers for January 28 through February 3 were 37, 33, 29, 59, 36, 47, and 42, with a mean of 40.4. The 10.7-cm flux was 118.8, 177.7, 118, 114.8, 118, 110.,9 and 108.8, with a mean of 123.9. The estimated planetary A indices were 7, 7, 5, 3, 2, 2, and 5, with a mean of 4.4.

ROBERT PAGE BURR, K1MI (ex-W2KQP), SK

TV and electronics pioneer Robert Page Burr, K1MI (ex-W2KQP), of Matinicus Island, Maine, died December 31, 1998, of complications following heart surgery. He was 76. Page Burr once wrote that getting his ticket in 1937 set him on the path of a lifelong interest in Amateur Radio and electronics. After a stint in the Navy during World War II, Burr spent 10 years with Hazeltine Corp and was a key member of the team that developed the US color television standard. He chaired the National Television Standards Committee that eventually persuaded the FCC and the television industry to adopt the NTSC standard. Burr also is credited with many other inventions and developments and held more than 200 patents. He retired in 1987 as senior scientific officer of Kollmorgen Corp. He was a member of the Institute of Radio Engineers, the Institute of Electrical and Electronic Engineers, and the ARRL. He received the Charles J. Hirsch Memorial Award from the IEEE in 1977 for his contributions to engineering. Burr won the July 1972 QST Cover Plaque Award for his article, "The Flashlight Sidebander."

IN BRIEF:

* This weekend on the radio: This weekend, keep an ear out for the North American Sprint (SSB), the Minnesota QSO Party, the Delaware QSO Party, the Vermont QSO Party, the New Hampshire QSO Party, the FYBO Winter QRP Field Day, the Ten Ten International Net Winter Phone QSO Party, the YL-OM Contest, and--last but not least--the Spring Classic Radio Exchange. Just ahead: The North American Sprint (CW), the YL-OM Contest (SSB), the WorldWide RTTY WPX Contest, and the PACC Contest are February 12-14. The

ARRL International DX Contest (CW) is February 20-21. See February QST, page 91, for details.

* Vanity update: The FCC office in Gettysburg reports it has processed vanity call sign applications received through January 14. On February 3, it granted 172 applications. Another 198 landed in the work-in-process, or WIPs, stack. The FCC reports it received a total of 12,152 vanity applications during 1998. It picked up another 1417 in January, attesting to the program's continued popularity within the amateur community. The vast majority of applications were filed electronically. The FCC reports that fewer than 20% of last year's applications arrived on paper.

* Palestine to be new DXCC entity: Effective October 1, 1999, Palestine (E4) will be added to the DXCC List. Contacts made with E4 stations after February 1, 1999, will count for this new DXCC entity. Under the DXCC rules, contacts with the deleted entity of Palestine made prior to June 30, 1968, will not count for DXCC credit. There is no commonality of territory or administration. The International Telecommunication Union allocated the call sign prefix E4 for use by Palestine in its Operational Bulletin No. 685 of February 1, 1999. This is in accordance with Resolution PLEN/3 of the ITU Plenipotentiary Conference held last fall in Minneapolis. This call sign allocation meets the requirement of the current DXCC List Criteria, Section 1(b).

* ZL9CI tops DXpedition QSO record: The Kermadec DX Association's ZL9CI Campbell Island DXpedition topped the DXpedition QSO record set a couple of years ago by the Heard Island VK0IR DXpedition. During its operation from January 6-24, the ZL9CI crew put some 96,000 contacts in the log. The VK0IR team had held the record at 80,000-plus contacts. Both the VK0IR DXpedition and the ZL9CI DXpedition were recipients of Colvin Award grants via the ARRL. For more information, or to see if you're in the log, visit http://www.qsl.net/zl9ci/.

* Mir/APRS School Club Roundup: The annual ARRL School Club Roundup runs from February 8-13 (see QST, Jan 1999, p 92, or visit http://www.arrl.org/contests). The objective is to get as many schools on the air as possible (all bands, all modes). Coincidentally, the orbit of the Mir space station during that week is over the USA during school hours, providing an ideal opportunity for students to participate in satellite communication as well. As part of the ongoing APRS/Mir/School experiments, MIREX has endorsed the participation of all schools to use the Mir digipeater for SCR exchanges during this weeklong event (do not connect to Mir). APRS style (UI) operations can handle as many as 100 stations per pass, so any school with a 2-meter FM radio, omnidirectional whip antenna, and a TNC should be successful on 145.985 MHz. The APRS/Mir portion of this event is not a contest but an opportunity for students and schools to learn about space communications. Everyone is encouraged to contact a local school science teacher and schedule a time period during that week when you can help set up and/or operate a school club station. Even if you cannot transmit for some reason, the live Mir downlink is always visible on the Naval Academy's MIREX Web page,

http://web.usna.navy.mil/~bruninga/mirex.html.--Bob Bruninga, WB4APR, via SpaceNews

* FISTS Novice Roundup: The 1999 Novice Round-Up, sponsored by FISTS CW CLUB, starts Friday, February 12, 1700 UTC, and ends Monday, February 15, 2359 UTC. Traditionally, the Novice Round-Up promotes CW contacts with Novice stations. Only QSOs made in the Novice/Tech Plus CW band segments will be valid. Novice/Tech contacts count 5 points; non-Novice/Tech QSOs count 2 points. Exchange: call sign, name, RST, license class, and QTH. Multipliers are US states (total=50). Scoring: Claimed score = (the number of Novice/Tech CW QSOs (5) + (the number of non-Novice/Tech QSOs (2) (the number of multipliers (states) worked. Certificates go to the top-scoring Novice/Tech and non-Novice/Tech. Winners get a year's membership in FISTS CW Club. Entries: Mail logs, summary, and check sheets to Novice Round-Up, c/o Dennis Franklin, K6DF, 4685 Capitan Dr, Fremont, CA 94536-5448. Entries must be postmarked by March 16, 1999.--Dennis Franklin, K6DF

* FCC denies fine extension: The FCC has denied a request by a Florida ham for an extension to respond to a forfeiture order resulting from an alleged nonamateur violation of FCC rules. Jeffrey G. Guss, KF4MWT, of Palm Bay, Florida, was fined $2500 last October for alleged intentional interference to a Business Radio frequency. On November 6, Guss requested an unspecified time extension claiming he had not had adequate time to confer with his attorney and needed to look into his options further. In a letter January 26, the FCC's Riley Hollingsworth pointed out that the Commission's initial Notice of Apparent Liability was issued in February 1998, and that Guss had filed a response last June. Hollingsworth said that if the $2500 fine is not paid, the matter will be referred to the US Attorney's office for collection. The FCC has not indicated whether Guss's alleged Business Band violation will affect his Amateur Radio license or future Amateur Service applications.

* ARRL/VEC telephone hours change: For 1999, the ARRL/VEC telephone coverage hours are 8 AM until 5 PM, Monday through Friday. To contact the ARRL/VEC, call 860-594-0300; e-mail vec@arrl.org; fax 860-594-0339. Call sign inquiries can be directed to http://www.arrl.org/fcc/fccld.html/ or to the FCC, toll-free, at 888-225-5322 (an automated inquiry system is in place at the FCC to handle after-hours inquiries).

* "Miss Vicky" retires from HQ staff: ARRL Club Administrative Assistant Vicky Armentano, a 22-year League HQ staff employee in Field & Educational Services, retired January 29. She handled the coordination of affiliated and special service clubs with the ARRL. Best wishes, Vicky!

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. Registered members may visit the Member Data Page, under "What's available here?" on the Members Only Web Site, to change their selections. Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. E-mail delivery changes typically are effective immediately. (NOTE: Please do not ask individual HQ staff members to change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

Members Only registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, November 6, 1998, type "send ltr1106.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

Cool, Dick is saying that a simple recognition of "dididit dadadah dididdit"
satisfies the ITU requirment for a "knowledge" of code!
Whenever you hear it, you call the Coast guard.

We feel sorry for us too. :-)

It does appear that the FCC will allow these usages, however, even though
they are in direct contradiction to the language in Part 97. It appears to be
a case of "do what we meant, not what we said".

Hi Dick,
No, all these machines have been running Win 95. I've tried running the
code programs (except Codequick which is Windows) under a DOS shell, and
booting true DOS. Think it's a system timing problem with these speed
demons with 100 MHz buses. I've got a number of older DOS applications
that have similar problems on fast machines. Even InstantTrack died
when I tried it on a Pentium II 350. Fortunately, there is a free
upgrade from AMSAT which allows it to run on faster machines.

Source record: 151445

Dear Readers,

I have been sandbagging on the group for a while and after hearing this issue discussed on our local PBS radio station today, I thought I should chime in.

This whole "Code vs No-code" issue has certainly been getting a lot of press lately. As everyone would expect, those of us who are "lower" licenses or unlicensed favor the newer proposals of the ARRL and FCC. People who hold more advanced licenses hold fast to the current code requirements.

I think these are important things to note:
1) Let's be honest. No one is proposing a "NO code" structure. I think everyone that has any radio experience (especially in emergency situations) would agree that CW is a valuable skill to have at your disposal. Is its prominence in the radio world at large, and especially in the amateur community, is waning, but I doubt anyone would want to see it abolished.
2) All of us, advanced and novice, should ask ourselves "What is the code requirement doing to further the hobby?". Now some will say it is filtering out the undevoted, those people who just wanna spam the airwaves. Well, this may be true, but what about the thirty-year old who has always wanted to be a ham but could never find the time to learn? Now family and job rob him of "free-time" and so he is left to watch from the sidelines. What about the children who can type English instead of having to learn code? Are we inviting people into the hobby? What happens when all the old-timers die off and we are left with empty air? These questions are the ones that we need to focus on if we want our hobby to remain vital. I do not want to see every Tom, Dick, or Harry crowding the bands, but there are other ways to ensure the INTEGRITY of the amateur community without making our admissions restrictive. I persoanlly would love to see more "theory intense" exams at all levels. I think those materials are more pertinent in an increasingly digital age and would serve to weed out the bad apples.
3) Code becomes infinitely more interesting when you can use it in context. I HATED CW until I was actually able to get on the air and learn how to have a QSO with it. I struggled with my 5 wpm, but I think that after I had the chance to communicate using CW it became more real to me.

4) Other nations have agreements that govern how access to the HF, VHF, and UHF bands is to be attained. What are their code requirements? I do not think that we have to been "holier-than-thou" in respect to what we require of operators. If we can be in accordance with the minimum standards in other countries, I think we would be fine.
5) Let's face the facts. CW serves best in emergency communications and DX work. I would venture to say, hoever, that a majority of operators would admit to using phone far more often than code. As the price of rigs and equipment becomes more attainable, it is easier and easier to explore alternative communication methods besides code.

I do not want code vanquished from the Earth. Nor do I seek to remove it from amatuer licensing. However, I do believe that we are at a turning point in the advancement of amateur radio in the US. The world has prvided a ton of other recreational diversions which compete with us for the attention and participation of the public. It is time that we step up and realize that we can move away from older methods and means without losing our tradition and quality of operation. Regardless, I think that we all should try to become less polarized by the issue. The name-calling and bashing that has developed over whether or not he/she "is pro/anti CW" is ridiculous. Leave the bickering to the governing bodies. Let's try to accept whatever comes and move on.

73s,
Brian Dellinger

As the life of King Hussein bin Talal of the Royal Hashemite Kingdom, JY1, comes to a close this evening, let us salute the illustrious life of this peacemaker.

Hussein's first brush with death came in 1951 when his father, King Abdulluh I, was killed at his side by an assassin's bullet. A bullet intended for Hussein struck the young prince in a medallion his grandfather demanded he wear, sparing the young prince.

At 18, he was crowned King Hussein I in the Islamic tradition after the brief rule of a Regency Council.

In 1967, he fought the Israelis, and later concluded a separate, lasting peace with them, which became the foundation for the Camp David Accords and Egypt's peace. He later authored a book on this experience.

Just last year, in a dramatic bid, he flew to Wye Plantation in MD to help save the faltering Arab-Israeli peace process.

He will be succceeded upon his imminent death by his eldest son, the half British, half Arab, Abdulluh II.

Allah akbar.

Clinton, didn't you know? Oh yes, Clinton has nothing to do with this thread.

Clinton has a lot to do with this and every thread on the Internet as he is the one who pushed the *Information Superhighway.* He got at least one thing right. Right or wrong he wtill represents the American Presidency, C-in-C, etc. and probably a better president that Oliver North could ever hope of becoming...someone else who lied under oath.

This fact is evident by looking at the decline of new amateur licenses
being granted. Also, the median age of hams is getting significantly
older. The ARRL figures that by doing away with the code requirements
----
>This poster made excellent comments. Before the Internet became popular I was studying feverishly for an amateur license not because I was interested in electronics but because I wanted to communicate with people from other parts of the world and US. With ICQ, MIRC, e-mail, and internet chat channels, communication by dits and dahs seems quite antiquated---now I enjoy "chatting" via my computer and don't have to wrack my brain about whether I heard a U or S. My ear is not that discriminating at my age(50+).
> Why is Amateur Radio dying? Because people such as yourself are carrying on a "holier than though" attitude towards those who don't yet know the code. Your attitude disgusts them, and they have no desire to become what you already are.

>>>AMEN!!!! BTW you code lovers, what are you doing chatting via telephone in this NG when you should be oscillating your key (BIG GRIN).

Whatever direction amateur radio takes, it's still a great service,
albeit it may become a threatened species.

>For PSK31, one needs a transciever-with very narrow filters,

Apparently not. As I understand it, you're still using SSB bandwidth
filters. Note that narrower filters are beneficial for PSK31, as they
are for Morse operation, but the program's DSP does a good filtering
job on its own (a good bit tighter than you can do in your head for
Morse).

>a computer (a fast one at that for it to work well), a sound
>card, all the IRQ's & DMA's etc all lined up and working,
>and that's assuming that Windows 95 is working properly,
>which in itself can consume most of a given day.

Yep, it could take a day, though it took me about 5 minutes
to set everything up. Most of that time was spent building
connecting cables. Note that there's now a Linux version
for those who hate the Evil Empire.

The idea that you need a fast computer is a bit misleading
too. Today's *entry* level machines are fast enough (100 MHz
Pentium is fine), and cheaper than ever. I bought a 300 MHz
socket 7 machine, with sound and video on the motherboard,
for $169 at a recent computer show. (And a 400 MHz P2, also
with sound and video on the MB for $522). Computer power
is *cheap* and getting cheaper every day.

>PSK31 is a neat mode, but not without it's drawbacks. It

>print. Once locked in and printing, they seem to hang in
>there well down into noise and QRM. But one does have to
>work at it.

Yes, a bit of skill and knowledge is required. Trust the tuning
indicators, they can "hear" things you can't.

>CW, on the other hand, well, just find another CW station
>and start sending. If you can hear'em you can work'em. Easy
>as falling off a log.

Huh? No skill or knowledge required? Well, if that's true, it is the
lazy way out. But I think that the man-months of labor required
to be able to use CW at even a minimally comparative level is *quite*
a bit more than the man-months of labor required to use PSK31,
including earning the purchase price of the required computer.
And as you noted, PSK31, and several other digital techniques,
are still more robust, work at weaker signal levels, and are faster
and more accurate than virtually all manual Morse operators.

Better, faster, cheaper, when you get all three at once, you
really have something.

Actually the first records of CTS in the medical literature were in the
19th century concerning "telegrapher's wrist". At that time there was
not a formal name for it but the morphology strongly suggests that is
indeed what it was.

I'm sure the procode bigots will go on about whining but it seems there
is a medical reason, at least for some folks, to not do a lot of CW.

The cure for most CTS is immobilization and anti-inflamitory meds. Some
reports indicate the glucosamine mixes can be benificial. This is for
informational value only see your physician for medical problems.

Curt-

I'm a pilot--the reason you must learn such things as ndb approaches and vor approaches is that many small airports--which constitute the majority of airports in this country-- do not have ILS, or gps approaches, etc. It is not to maintain a link with the past.

Apparently Chris Imlay has gotten the FCC to give PSK31 its blessing.
It appears that they didn't actually mean what they wrote when they added
97.309(a)(4), and actually intended to allow use of any publicly documented
code, though the language says the opposite.

Doug,

Don't let them get under your skin. It's all over for code testing but the shouting. The fat lady is warming up. In five years they will still be here telling each other how great they are because they passed the "good old test" not the new "lower standards" one.

I underwent the code hazing some time ago. Can I operate CW--yes. Do I operate CW--Hell No. The reason: assholes like the ones here or at hamfests talking about being "real hams" and abusing anyone who doesn't agree with them. Pity them it code proficiency must be the only accomplishment in their very little lives if then have to defend it with such intensity.

Adios Jerry

Brian--

I agree and I am an Extra. 5wpm is plenty and exceeds the international requirement-"to send and receive morse"--there is no speed required, 1wpm would legally suffice. BTW, in my part of the country, the emergency traffic nets use phone, not CW.

I think there is a grace period where you can renew. You can not operate untuil it is renewed.

Try www.fcc.gov for some info. If it was a current licnese, you can renew online, don't know about the expired ones.

Andy,

I'm also an instrument rated private pilot. You're right about the
usefulness aspect of the VOR and NDB training, but I simply point out
that it also retains a link with the past. CW is useful and maintains a
link with the past. That's the relationship.

> code, though the language says the opposite.

Actually, the language says exactly what it intends to say; PacTor, for example, starts with a "legal" digital code and compresses it using a lookup table, just like PSK31. 97.309 (a) (4) is a bit confusing, but the examples given are of various modulation and encoding techniques. IMHO, the intent of the rules was to permit plain-language transmission, but not to permit sending programs and other non-ascii type transmissions on HF. (Another discussion.) But PSK31 became legal to use on HF the minute it characteristics were documented publically, as were the other examples the FCC chose to use to illustrate exactly what they intended be permitted.

The regulations are actually quite permissive; the FCC changed them some time back. Now, if they would only relax the spread-spectrum rules like ARRL and TAPR and others want, we could all play there, too. We are all waiting for the FCC to decide what they want to do with the NPRM that has been hanging fire for a while.

See http://www.arrl.org/field/regulations/news/part97/ for a current copy of Part 97. Enjoy.

I love the Program too, as far as the code speed, Most send at 20 wpm spaced to 13, I think. At least taped versions, So I would study at 21 wpm space to 13 wpm, then if the use slower speed, well it be a piece of cake, when you actully take the test then.

You know it is sad that they have that kind of stuff on the air (Radio, TV, etc). Of coarse it is not all their falt in part it is all of our falts. I mean if we would turn the stuff off, and shunn from such language; the world would begin to be a better place. We also need to inform people that isn't correct thing to say or do. I like the fact that people have stood up against it. If we don't were will it stop? Besides I believe that if a man can keep his tounge under control, he can keep his actions in control.

Think about what kind of people are the ones that use that language? What type of people are the ones who don't?

However some people have not been told whats right whats wrong, and someone just needs to inform them once in a while, kindly; and if you don't want yours kids doing, you should not be partisapating in it yourself. Anyhow enough enough. I am glade to see people stand up agaist this though.

Thanxs,

What this refers to is that in all regulations covering the use of radio transmitting equipment this is a standard prohibition. The chances of actually being prosecuted for this offense is probably very slim as a law enforcement agency requires a Title III warrant to listen to your cell call legally and would probably have a difficult time getting one unless you are a major player in the drug or other form of organized crime. Even if they run across it by accident, they can't prosecute because if you weren't the object of the warrant, they are committing an offense by listening to your conversation.

Been there, done that. Kind of funny in a way.

By the way, this only applies to cell and cordless phones as well as trunked radio systems. It does not apply to most other forms of radio communications as they are not covered by the laws governing the "privacy" of the afro mentioned.

The best place for MT63 information is the MT63 web site
(well what a surprise!). You'll find it at:

http://members.xoom.com/ZL1BPU/MT63/MT63.html

It just so happens that I run the site, so if you have any
questions about the mode, let me know.

As to the designator, well.....

64 tones, spaced 15.625 Hz, each modulated with BPSK,
at 10 bps, so what does that make it?

I replied:
I think not OM.Between the wife and I we have four layouts in 4 different scales, and have multiple steam locomotives on all of them. For further reference, check out Model Railroader Magazine (web site is www. model railroader.com/).
As to full size steam, how about Steamtown in Scranton, PA, any of the narrow gauge stuff in Colorado, and so on. If you want revenue service pulled by steam locomotives, the Reading, Blue Mountain and Northern uses a 4-8-4 loco to sometimes pull it's coal trains. Same for Union Pacific on regular freight.
Oh yeah, don't forget that steam power generates your electricity. Even in a nuclear power plant, the nuke only supplies heat to heat the water, it doesn't make electricity by direct conversion of the nuke process.

Cross-posted to: alt.radio.digital,aus.radio.amateur.digital,aus.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.misc,uk.radio.amateur

Hi folks,
The MT63 Web site at http://members.xoom.com/ZL1BPU/MT63/MT63.html
has just been upgraded.

It now includes the "official" code for the new MT12 and MT13 modes with CW ID and increased interleave.

For those that are unaware, MT63 is an awesome HF digital mode, that is just about indestructible. It works well when other modes give up when the QRM or QRN are bad (or both!), and survives quite significant jamming. The throughput is 100 WPM, good or bad conditions alike.

For those (especially in the USA) who are frightened to run advanced digital modes because they have not been blessed by the ARRL and/or the FCC, gee we feel sorry for you! MT63 is public domain, and although coded, is not encrypted.

You need a Motorola 56002 EVM to run MT63. A list of EVM users is available at the MT63 web site.

:cw.

By any chance, were you running NT 4.0 when you were having this strange stutter-step? I have had quite a few problems with running older programs that access the CPU ports without a real 32 bit device driver 'talking' to the the CPU port. This is caused by NT 4.0's Hardware Abstraction Layer, HAL. :-) HAL, will write to or read from the CPU ports in it's own time so there could be variable delays that make your 'wizz-bang' system perform more sluggish than an 8086 Packard Bell. :-(

One thing that I found works is to boot Real DOS from the A: drive and run your program from floppy. If the timing is correct then you've proved that Microsoft scewed up NT when they went to 4.0! :-(

'Open the pods doors, HAL.'

No, a repeater may operate under automatic control, 97.205(d), except when conducting third party traffic, IE phone patch. Then a control operator must be present. Repeaters without patches may always operate under automatic control.

> code.

Uh, NO, Dave, I'm afraid that PSK31 doesn't "have all the
advantages of Morse". In fact it has some that Morse
doesn't, but it is sorely lacking in other areas where Morse
really shines. Let's see..

For Morse, one needs a transciever and a key. Plug it in,
turn it on and go to work.
For PSK31, one needs a transciever-with very narrow filters,
a computer (a fast one at that for it to work well), a sound
card, all the IRQ's & DMA's etc all lined up and working,
and that's assuming that Windows 95 is working properly,
which in itself can consume most of a given day.

PSK31 is a neat mode, but not without it's drawbacks. It
must be tuned *very* carefully, and on signals that are weak
when first tuned in, they can be a real bear to begin ti
print. Once locked in and printing, they seem to hang in
there well down into noise and QRM. But one does have to
work at it.

CW, on the other hand, well, just find another CW station
and start sending. If you can hear'em you can work'em. Easy
as falling off a log.

I'll start off by saying I am not a Ham.

I am very interested in getting my license, have been since I was a boy. I'm 28 now and other job/education/military reasons, I have never had the time to study for the test or found anyone in my area until just recently that I point me in the right direction. As far as CW goes, I really don't see why 13+WPM should even be required to advance. I would think that 5 WPM would be sufficient. I think CW should still be part of Ham radio because it is THE one form of radio communication that can still be transmitted and picked out through the static if need be. I would think that the true requirement for advancement in license class should reside on technical capability after the minimum 5wpm. With the rapid advancements in electronics gear and features technology should be stressed. no-one really uses CW anymore but it still has a place in Ham radio.

But then again, I could be wrong,
Johnny

>Steve KC6IJM

Bunch of groups snipped. What you have is a battery pack designed for
use with NiCad cells- 10x1.2 volts. Radio Shack used to have a simple
aluminum form that would replace same that was used in several of
their CB walkie talkies. The idea of the dowel and the thumbtack
should work nicely.

Noted, John. Now, fast forward to the end of your post:
> no-one really uses CW anymore but it still has a
>place in Ham radio.

I hope you will join our hobby, someday. Meanwhile, borrow a short wave receiver and listen to the bottom portion of the HF Amateur bands. The beeps you hear are the "nobodies" who are still using CW. But you could not know this unless you are involved in monitoring on HF.

On the higher bands, you'll use your knowledge of Morse Code to ID beacons and repeaters, satellites, and some telemetry.

Hope on the CW express! You'll find plenty of folks--and many of the guys and gals are about your age.

Has anybody on this NG ever seen a tower that failed because of the foundation? Probably not. Most if not all towers that have fallen down fell down for reasons that have nothing to do with the foundation. Most towers that have fallen fell because of a guyline failure, and this guy wants to install a freestanding tower. Dig a hole, don't worry about soil mechanics, (Proctor's,Atterburg limits, hydro's,whatever)do what the manufacturer says and you will be all right.
As far as hiring a PE, don't waste your time or money. A lot of them I have had to deal with couldn't find their ass with both hands and a dog. To be fair, a lot of the PE's I have had to work with were really sharp and I learned a lot from them. However, in the last year I have had PE's ask me what the wooden stakes with the C's and F's are about (cut out this much soil, fill in this much soil), and I've seen blueprints that were stamped by no less than 12 PE's that had storm drain outlets that faced UPSTREAM into a drainage ditch. Probably wore out the rubber stamps approving that crap.
Meet or exceed the manufacturer's spec's and you will never have a problem.

Yup, Morse was in use on landlines as early as 1844, and voice followed just 30 years later. Don't you find it interesting that the two oldest modes, code and voice, are still the two most-used modes on the ham bands today? They've really proven themselves.

In today's el-crappo "sue everyone for everything" society, warning labels are
a must for manufacturers looking to protect themselves from all manner of
frivolous lawsuits. This is probably the reason. Otherwise, you'd probably
have a case where somebody's kid listens (illegally) to a foul-mouthed
cellphone user, then turns around and sues the cellphone manufacturer for
damages to the child's moral character, mental anguish, pain and suffering,
etc. Ridiculous? Sure. But no more so than the current practice of gun
manufacturers being sued by cities for damages caused by Rufus and Jerome in Da
Hood.

CW can be very difficult for some to learn. I've learned (and relearned) the code several times but could never get much past the Novice level. Some of us are not "wired" for code. The long standing theory has been that the code requirement "weeds out" the undesirables from the amateur hobby but in my case it prevented me from being a Ham (on HF) because I have no interest in the Technician license.
I better not say anymore or I'll be responsible for resurrecting the infamous code debate on this group.

How about a shortwave preselector? It seems that many on this group could benefit from one,especially those that would like to use a long external antenna with their portable receivers like the Sony 2010,Sangean 909 or DX/398-etc. It should use high "Q" coils (wound on ferrite cores) to give good selectivity and a bandswitch to cover the entire HF spectrum.

I have managed to get SM running just fine on a 233MHz K6 powered Compaq Presario notebook, which I am using right now to write this. NuMorse runs fine with no twiddling at all. What I DO have problems with is JVFAX, HAMCOM, etc. These progs run best on a 486 class machine. Mixed results with booting real DOS. Also inconvenient. I kinda wish I had a 486 with a color screen just for running stuff like that in DOS 7 or MSDOS 6.22.

Big trick to running SM on a fast machine is setting background sensitivity to minimum. Change this settings by finding the ADVANCED properties of the shortcut. Then, first thing, calibrate the timing of the program from the program menu. There are two timing methods, Loop and Timer. Don't remember which one I use. If somebody needs that info I'll dig it up and post. BTW I have SM available for download at my site. I might take it down and replace it with NuMorse, though. Most newbies are using 32 bit systems now, and have a hard time with the DOS stuff.

I rather like the YB400. Hell of a little radio for the money. I used it a few times for a ham RX to go with 1 or two stage homebrew Transmitters. Awkward but do-able. Even used it to pull WEFAXes a time or two.

As for adding a BFO to get better resolution, there are limits to the practicality of that scheme. If you want this for SWLing, be prepared to put up with some rather rough audio. You can come mighty close to zero beating the carrier, but the phase difference as it cycles makes it's own noise. Not always pleasant to hear. Music is not fun at all to listen on such a cobbled together SSB setup. Still an excellent excercise in practical wireless design application. And if you go with a 455 KHz unit, which I think is what you want with the YB, (Not sure though) you will find lots of other cheap SWL sets that will use the same unit. If you have a SSB or CW filter of the same freq, you can do some interesting things with a $40 radio.

When I first started messing around with radio, I used to take a lot of cheap AM MW sets apart, retune the LO, and listen to the lower SW bands. Also tried to make a BFO the same way. Never got it performing particularly well, and when it worked, it was mostly by accident. Still it kept me occupied with something besides going out and spending money in the bars.

2898. Ham Log v4 - Software Upgrade

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-05 00:00:00 UTC
From: rhg@sydney.dialix.com.au
Message-ID: <918209774.106772@fermi.dialix.com.au>
Source record: 151512

To All Ham Log version 3 Users...

Ham Log has been used widely throughout the world as the logging program for discerning Amateurs. In 1999, Ham Log celebrates its eighth birthday, with the release of a version FOUR.

Of significance with this version four release is that it is totally Year 2000 Compatible (assuming that the computer that it is used on is also compliant). It also encompasses the major ARRL DXCC changes and includes new features and enhanced logging operation. The program has been fine tuned so that it remains the definitive logging program for discerning amateurs - world-wide.

Details of some of the version four improvements are provided at the end. The new demonstration version (HAM_LOG4.zip) is becoming available. FTP is available at:

ftp.funet.fi - in directory /pub/ham/hf-log
ham_log4.zip and ham_log4.txt

All version three users have been notified by mail of special deals on upgrading. The addresses for many users may have changed, as some have been using Ham Log for many years. If you (or you know of friends who are using Ham Log) have not already received notification of the upgrade, please contact me at the address below. This is important as the _special_ upgrade offer is only available for a limited period.

Thank you for your assistance and support.

---

HAM LOG VERSION 4 - AN IMPORTANT UPGRADE

Listed below are some of the changes.

ENTITIES...

On 31 March, 1998, several major rule changes were made by the ARRL concerning DXCC. This included the deletion of all references to Countries, which are now known as "Entities".

A large amount of work was required in version 4 to reflect these ARRL changes.

In addition, new some new Entities were created, together with some significant changes to prefixes.

YEAR 2000 COMPLIANCE...

All previous versions of Ham Log were not fully year 2000 compliant. Fortunately, all years were recorded in a four digit format, however, several changes were needed to make Ham Log totally year 2000 compatible. These have been done.

ENVIRONMENTALLY FRIENDLY VERSION...

Ham Log now comes with the new version 4 manual on disk, which you may print if desired. There is significantly more help available within the program such that the need for reference to a written manual has diminished. The printed manual was a significant cost, and as such the price of Ham Log has reduced! (A printed manual is still available.)

The expanded help provides more details about the superior features of Ham Log. Of course, the F1 help remains context specific and available throughout the program.

BETTER PERFORMANCE - FASTER TO RUN...

The program now runs faster, with some clever new programming techniques. There are also some great improvements at start up for registered users. Firstly, the copyright screen at start up is bypassed, and the logo screen only remains until the program has completed some quick virus checks. Secondly, the Main Menu can now be bypassed so that the program goes straight into the Log. Further, you can preset the order in which the log's QSOs are scrolled to your preferred choice.

So now you can be adding a QSO with one key press in one or two seconds, whereas in the old versions it could take up to 20 seconds and several keystrokes.

And exiting Ham Log is like lightning - just one keystroke from virtually anywhere within the program. As such, the Main Menu need not even be used!

The program uses less of your computer's resources while idle, giving greater processor time (and therefore performance) for other programs running concurrently under Windows.

SOME NEW AND IMPROVED FEATURES...

- Adding QSOs is easier. You can now preset any date (not just UTC or the current date - useful for adding old QSOs). Version 4 now gives you the options of pre-setting the frequency field, and / or using the frequency of the last QSO. When you have completed a QSO, the program prompts immediately for the call sign for another QSO, saving you from having to re-execute the Add QSO menu choice.

- The Text Editor field (effectively an unlimited notes field for a QSO) is now far easier to use in version 4. No longer do you need to use control keys or remember to save it before another QSO. You can even save your notes automatically with the current date, which is useful when you use the facility where the text is available for all QSOs with a specific station.
- The General Station Information (F10) is now easier to access and edit. Like the text editor facility, it is much simpler to save the information.

- The Custom Field Menu now allows you to globally replace the Custom Field with each QSO's call sign. (Remember that this change need only be temporary.) This enables most lists and reports to be confined to those QSOs with any specific station.

- Many of the less significant error messages have changed such that they no longer require a keystroke to acknowledge and remove them. Additional error checks on data entry have been added.

- There is more sophisticated printer control, with more error checking. It is also easier to abort a long print job.

- There are many other general and minor enhancements.

PROGRAMMING IMPROVEMENTS...

- Version 4 of Ham Log now comes with a separate program that will totally recreate the index files. Previously, in the event of severe file corruption, users had to follow a complex procedure using their original disks.

- The use of memory has been optimised for the larger program.

- Checks of available RAM and disk space have been deleted as these days they are rarely a problem. The program requires DOS 6 or above (though DOS 5 loaded high seems OK).

- In the rare event of a virus being detected by the program, it will provide some details, before aborting.

- A rare bug that gave errors on the first worked QSO for a country has been fixed.

Whatever you do, always get the 'latest version'. Older versions of these
programs were compiled with now-outdated system libraries. In many
instances, these libraries did not have the capability of accomodating
faster machines. A common problem is with the sleep()/nap() routines,
where the computer has to calculate an internal clock rate and then apply
that rate to your sleep period to get an iteration count. Welp, oftentimes
these routines used a 2-byte int for their counter, which, ooops,
overflows with faster machines (need a 4-byte long int instead for it to
work properly!)

If you have a situation that is life threatening,use the police of fire mutual aid channels for that state.

ANY frequency in an emergency. That is the law.
If your afraid of loosing your radio just key up with a legit sounding ID and report the thing...then keep going. Cops can go a little sideways when this happens(getting on the system)...If they give you crap and take your radio...call the local papers and tv stations. You become a hero...and get your radio back.

It's interesting that you mention that about the "weeding out" thing. It reminds me of the read test they gave people at the voters registration office some decades ago. That test was also intended to "weed out" the undesireables. I think it was discrimination then, and I think it's discrimination now. I can understand (which does not mean that I necessarily agree) that one wants to implement some test to prevent chaos, but I think it should be purely technical on either LF/MF/HF/VHF/UHF etc. issues. Like a basic technical test for all bands plus some specifics for each band you want to transmit on. For instance, if you want to transmit on HF you have to pass the basic technical test plus the HF specific portion. CW is just a mode that can be used on any frequency. I think the only argument one could make is that in order to be allowed to transmit in CW you have to pass a CW test. If CW is being used to gain privs, then one could also argue that you need to be able to speak French in SSB in order to transmit on 40m.

Butm no help in identifying nor tuning in the signal at the outset. One must find the signal--usually but not always weak in comparison to almost all others as many PSK oprs are intentionally using QRP. Once found and identified, one would think that it would be a snap to tune it in--but not so. Seem that levels are now an issue. Too much input from you receiver, too much noise in the "waterfall" display to find weak signals. Too little, you might miss the signal entirely. Not a given, at all.
>

> to set everything up.

Well, given a near-new notebook with an apparently-working soundcard (test sound and startup sound worked flawlessly) that refused to display any hint of signal on PSK, the need to wade through the entire regime of Win95 was found. I ultimately discovered the the sound card was set on IRQ 5, but in the device manager, it showed IRQ 10 for the soundcard. Would you believe that as I moved to correct this, WIN95 also moved ahead of me and corrected it first?

If I hadn't gone to the trouble to carefully write down all
IRQ's and DMA's I'd have thought I made a mistake. In any
event, the computer started workign on PSK at that point.
Then I fouind that on my computer, the book was wrong- It
said to use the line input on the sound card, and not the
microphone input. But the only way I could get adequate
drive was to use the mic inpur and adjust the level with the
radio volume control, while using the gain control on the
DSP that drives the speaker for monitor volume. When using
the line
input, only a very weak signal can be observed, not enough
to drive the soundcard to make PKS work. The ICOM 738 does
not allow CW filters to be used on SSB mode (no provision
in 'setup' to change the SSB filters) so I must use CW mode
to invoke the narrow filters.

Most of that time was spent building
> connecting cables. Note that there's now a Linux version
> for those who hate the Evil Empire.

I'm considering trying Linux more and more each day...As
more applications become available I'll have to give it a
try.

That's just regurgitating what the online manual says,
evidently written recently. I'm using a Pentium 200MMX and
it seems to be plenty fast.

> Yes, a bit of skill and knowledge is required. Trust the tuning
> indicators, they can "hear" things you can't.

That's not my experience so far. I hear weak obviously
PSK31 signals that I can never ID on the waterfall display.
I know that level adjustments affect this, and have tried to
find the correct levels for the weaker ones but in noise it

just doesn't seem like they are there...Gain and filter
adjustments on the radio don't seem to help much. I also
find some - many - signals just don't seem to want to lock
in, or do so just for a word or so, just enough to confirm
that it *IS* PSK, then seem impossible to get tuned in well
enough to display. My Icom will display 1 HZ and of course
the PSK onscreen tuning will. But often the transmission is
ended before the print can be cleared up.

Now, I'm still new at PSK and I know that there are
multiple factors involved. I copied several QSO's last
weekend and seemed to have better success than at any time
since. The problem(s)? I'm not sure at this point but I know
I can work out the details. One thing I'm sure of is that
last weekend more strong signals were around, some of which
faded into noise providing a good test of weak signal
capabgility. But it is a problem here to find and tune in
signals that are weak initially.

My point is--this is not in itself a simple mode,
requiring only a "computer, soundcard and 5 minutes" to get
going. That's simply not so - Unless one is a digital guru
from the get-go and then even then it seems questionable.

For anyone to insist that all this is going to
automatically be a simple exercise is patently wrong. Maybe
it will-and maybe it won't. I intend to retain my CW
capability in either case. For anyone to assume that this-or
any other technology mode in ham radio is a panacea is
overstating tbe case.

> Huh? No skill or knowledge required? Well, if that's true, it is the
> *lazy* way out.

Well, no--it would be the more effective way to quickly
handle a brief exchange of information where
quantity/throughput was not an issue and a quick, timely
exchange was.

But I think that the man-months of labor required
> to be able to use CW at even a minimally comparative level is *quite*
> a bit more than the man-months of labor required to use PSK31,
> including earning the purchase price of the required computer.
> And as you noted, PSK31, and several other digital techniques,
> are still more robust, work at weaker signal levels, and are faster
> and more accurate than virtually all manual Morse operators.

For those who intend to go through life with the attitude
that they are oppressed because officialdom believes that it
is a little important that they, as ham radio operators,
possess enough CW skill to adequately pass slow traffic,
yes. For the rest of us, no. When learning Morse code,

attitude means everything.

>
> Better, faster, cheaper, when you get all three at once, you
> really have something.

Well, I have the computer, the radio and the program. On
the occasions when I can persuade all three to agree on what
to do in coordination it DOES work. But it seems the "easy
simplicity" of PSK31 has been a bit overstated.

>Actually, the language says exactly what it intends to say; PacTor, for
>example, starts with a "legal" digital code and compresses it using a
>lookup table, just like PSK31.

Lets see, PSK31 starts with keyboard scan codes, which it may or
may not convert to ASCII internally to the program, does a one to one
table lookup to transliterate that to its native varicode alphabet, and then
transmits messages in the varicode telegraphic alphabet. (It could go
direct from scan codes to varicode, I haven't seen the sources.) On
receive, it takes the received varicode, may or may not internally convert
that to ASCII, then converts that to a font bitmap and displays it on the
screen. But because ASCII *may* be involved as an intermediary
representation somewhere internal to the program, you say that's
OK with the FCC.

PACTOR doesn't work that way. It does an algorithmic compression of
ASCII text strings (Huffman compression), not a one to one transliteration
of telegraphic alphabets. The transmitted text is compressed ASCII, not a
different telegraphic alphabet, and algorithmically decompresses back
to an ASCII text string. There's no one to one static mapping between
different telegraphic alphabets (the Huffman compressed string isn't an
alphabet).

With PSK31, the transmitted text is actually varicode. That's its native
telegraphic alphabet. No ASCII need ever be involved. It is possible
(even likely given today's dominance of ASCII for text representation
in computer programs) that a program may internally represent its
text in the ASCII alphabet somewhere in its internals, but there's no
way to assure that it does based on what is sent over the air.

Interesting. If that interpretation is true, then anything goes. I can convert anything to ASCII internally, then convert it to anything else before transmission. It's just bits internal to the computer. For example, if I wanted to convey the binary value '0110110', I could convert it to the ASCII string "54" in the computer, then change it to the quaternary number 0300 before transmission via QPSK and be legal. I could do that with any arbitrary value representing anything, IE convert it to an ASCII representation internally, and then convert it to some other coding before transmission.

If that's what 97.309(a) means, then it means nothing at all. We can use any arbitrary coding, as long as we represent it as ASCII internally at some point. I don't think that's what 97.309(a) means, and it is certainly not what it says. If it did mean that, then why is there a 97.309(b) for unspecified codes?

Now I'll tell you what I think the FCC *meant* to say in the 1995 revision. What I think they meant to say was that we could use any publicly documented transmission coding under 97.309(a)(4), and that codings which aren't publicly documented would fall under 97.309(b). That makes sense, and is consistent with the intent expressed in the docket, but it isn't what the Part 97 language *says*. It says the information coding must be in one of the three specified telegraphic alphabets, and varicode isn't one of them.

Are those things actually 'practical'? How far can one transmit with only 300mw and a 5" antenna? How long will the battery last with actual use (vs just monitoring, which I'm not much into doing while pedaling around town)? I live less than a mile from a 70cm repeater, do a lot of bicycling, and was just a'wondering if it'd be any more than just a hi-tech useless toy for such.

Just in case you've no idea what I'm talking about ("credit-card sized radio?"), check out the Alinco DJ-C5T at http://www.alinco.com/Products/DJC5T.shtml

And what about others? I just happened to notice that one at Fryes (however that's spelled) today and thought "that'd be perfect if it actually works..."

Thanks!

Hello to all,
I hope this email find you all in good health.

I would like to introduce a new organization to you all. Amateur Communication Emergency Services is an organization set forth to offer assistance to local and state organizations that may need emergency communication. The big differance is less politics. Also more of what we need, relistic SET's. I vow that this organization will stand behind the amateurs not personal agendas like the ARRL.

Membership is free. All you have to do is send me an email for more info.

Thank you for your time.
Greg Godsey

Thanks very much to everyone for the leads and tips on
the dummy AA battery request. I did check with our
local Radio Shack, and the crazy dummy AA batteries are
$3.99 each in their replacement parts list. I may try
the wooden or aluminum dowel method too. Much cheaper
than the pre-made RS part! Thanks again! Steve
KC6IJM.

2916. Re: LOW power credit-card sized radios

I bought two of them, and sent the 440 Mhz back to TechAmerica because I found out that there wasn't any 440 MHz repeater activity left in my county anymore.

But I kept the two meter and it's terrific! Took two pieces of Valcro and just stuck it right to the front window of my car! I hit several local repeaters and can also monitor local sheriff, rescue and NOAA weather since it covers up to 174Mhz on receive. Battery lasts a long time and QUICKLY recharges in two hours.

Best $79 I've spent in a long time!

A message to the orriginal poster. When stating the time of your show, it would be much more useful to use UTC instead of local time. To someone that didn't know the station they would have to wonder what time zone you are referring to.

I have one of the radios that you refer to, and it works just fine for
local repeaters. I wouldn't have it for a primary hand-held, but it
works great as a small-scale backup radio. I've found that the 2m side
seems to work a little better in my situation than the 440 side, but
that may be due to the geometry of the antennas at the co-located
repeater site. I have also used this small radio to work simplex
between cars on the highway, and it appears to have a reliable range of
about 1 mile under those circumstances. The other radio was an ICOM
W32A with an external antenna.

>Gary Coffman KE4ZV

Give some examples of the "extensive editing" of what movies. What was cut? Sexual intercourse scenes? Full nudity? Homosexuality? Profanity? Dirty jokes? The list goes on and on. I have seen all this and more on over the air TV...

Further, over the air channels (comparing channel to channel) have much bigger audiences than their cable counterparts. They may be declining, but I can't imagine censorship as the problem, since they already have the above mentioned subject matter.

Probably worse than censorship is the way they cut up movies to make room for the commercials...

How sad...

Not all hams engage in useless projects. How about a small, synthesized HF transceiver for under $200? Commercial manufacturers haven't done it yet but we have. My coworkers also experiment with wireless networking (Ethernet 10MB).

As for emergency work, pick up an edition of QST magazine. If that's not convincing just wait for the big Y2K crash.

I've got the 70cm version and my personal opinion is no, they are not "practical" because they are acutally too small and the ear bud can be a nusance. But when portable they can be fun, I use mine once a year for talking to my buddys at Dayton, it works great for that, light weight and the battery runs all day long and even with heavy TX . On the other hand, I did take it to Mexico last year and worked several stations 40 miles away, of course I was on top of one of the highest points in Northern Baja too :)

They certainly are inexpensive now, but if I were cycleing I think I'd prefer to have a little bit more antenna to work with.

You might also pick up a copy of "Barnstorm" a group that Joe Walsh formed for a short period of time, on one of the tracks he sends "REGISTER AND VOTE" using a keyboard and blends it in quite nicely. Circa Mid 70's

The number of those who do so is dropping rapidly. Witness the recent closure of the AES store in Tampa, Radio Shack dropping much of the ham merchandise from their inventory, etc.

> Why not give us legitimate commercial interests your VHF, UHF and SHF
> spectrum

Already happening. Money talks. Efforts are currently underway to reallocate substantial portions of the VHF and UHF spectrum for more useful purposes. It's simple economics, really. The US Treasury wants the money; commercial interests need the spectrum and are willing to pay for it.

> so that we can do something useful for mankind instead of letting
> a bunch of retired has beens have access to billions of dollars of
> spectrum for nothing more than comparing prostate troubles during the day

While the producers in this country support their sorry rears by paying confiscatory-level Social Security and Medicare taxes. And yet, the politicans want even more taxes so we can "save the system." Screw it. Let this welfare pyramid scheme go broke and force them to fend for themselves.

At least the commercial drivers would have a legitimate use for the frequencies. Road information is more important than colostomy bags, in my opinion.

Holy Shit! Does this mean that the ARRL recognizes the formation of a
Palenstineian State on the West Bank? My glup it's going to SNOW in
Florida in July! The ARRL has finally made a good move as by doing this
they recognize Yassir Arafat dream of a PLO State in (Israeli occupied)
Palestine. Somehow however, methinks all those folks in 2-land aint gonna
like this. Oy!

Interesting commentary Dennis but what do you know about ham radio? Clearly not much. Let's see...

> Dennis A. Mason
> damason@uswc.uswest.com
>
> (I agree with every word, but he was too mild-Burt K1OIK).
>
> You ham radio ops are a bunch of cheap skates.

Yes, this is why new amateur radio gear sells for $1000 + and new multiband HT's go for $350 and up we buy these radio's because were so cheap?

> You're always trying to
> screw us commercial dealers out of a radio or repeater for some stupid
> project of your own.

Screw you? Have our negotiating skills attained a level that you can't deal with? How exactly are we screwing you?

> Most of your repeaters are all closed

No, most are not. Just look in the repeater guide. Although in the larger citys you probaby see more of this.

> and are
> absolutely worthless for emergency use. You all claim to be such a big
> help in emergencies. WELL YOU'RE NOT!!! Hams can't and don't contribute
> anything to disaster relief any more.

Wrong again, there are countless newpaper articles NOT in ham radio magazines to support this, have you read any of them?

> All you do is whine and moan about how much a piece of commercial
> equipment costs. Well that isn't entirely true. You do go to hamfests
> and whine and moan to vendors about how much their equipment costs as
> well. You idiots have absolutely no idea what goes into the design
> production and marketing of any piece of gear, commercial or not. I
> truely feel sorry for any poor bastard that relies on making a living from
> you cheap SOB's.

While profit margins are small when it comes to selling amateur radio gear, you might consider getting into the commercial electric business, a contractor buying florecent light bulbs in quantity can usually buy at 2 to 3% over cost.

> Why not give us legitimate commercial interests your VHF, UHF and SHF
> spectrum so that we can do something useful for mankind instead of letting
> a bunch of retired has beens have access to billions of dollars of

> spectrum for nothing more than comparing prostate troubles during the day
> when the rest of humanity is doing something useful... like working for a
> living.

Your of course talking to the wrong crowd, you need to contact the FCC regarding frequency allocation. Clearly we still have it for a reason. As far as something "useful" many commercial frequencys sit dormant all day long with only a few transmissions thoughout the day. While trunking has solved some of this, if you take a look at the through put of commercial freq's compared to an amateur radio frequency you might be surpized about which part of the spectrum gets more use.

> I'm sure to get some flame mail over this so I might as well make it
> good... You guys are worse than CBers. All you do is bitch about code
> requirements and how hard the tests are to get a license.

I've been reading this newsgroup for years now and have never seen a post complaining about how hard the tests are. The CW requirement however has certainly been discussed, at least we know there are people out there passionate about the hobby, whether you support code or are against it.

> Well I got news for you.

I haven't heard any yet, but OK

> You hams should be relegated to about 400 KHZ of spectrum in
> the 20 meter band.

Thanks, glad to see you supporting an additional 50 KHz of bandspace on 20m, we could use it.

> It should be allocated into 40 distinct channels 10
> KHX apart.

Great idea, send it off to the FCC right away, Im sure they'll give it the same consideration as parol for Charlie Manson.

> established disaster frequencies." The exact same language is in this
> (still in print) publication.
>

And a partial quote from that document:

The well-balanced disaster organization
will have CW, phone, and
digital mode capabilities available in
order to utilize all of the advantages.
Of course, one must make the best use of
whatever is available, but a
great deal of efficiency is lost when
there is lack of coordination between
the different types of operation in an
emergency. Absolute impartiality
and a willingness to let performance
speak for itself are prime requisites
if we are to realize the best possible
results.

My,my.. I see that the ARRL agrees that ALL modes should be
kept at hand by hams, ready for use of whatever is needed in
an emergency/disaster. No surprise, given that the recipient

of emergency traffic is naturally required to follow the mode capabilities of the station who is sending the emergency traffic-common sense should cause anyone to agree with that. So as long as there exists serious Cw activity on amatuer radio, licensed amateur radio operators should be required to minimally qualify as Morse code operators. The only to do that is to require a Morse code test.

MA has a thing about hauling in the cash as much as possible. The doubling is about $35 a year, plus a 6 month wait to get the plates and another transaction charge for re-filing your registration. On the other hand, car registrations here are now self-renewing. (Of course, that means your estate could still be getting bills from the RMV years after you're dead...)

Curt--

I have no problem with CW as a link to the past--I occasionally use it--worked East Malaysia on 40 CW recently with a wire-- and think that those who prefer it ought to have protected spectrum where they can dah dit to their heart's content just as we do for RTTY, SSTV, etc. My problem is in requiring any more than 5 wpm as an entry barrier to the phone bands on hf. Btw, the so-called "emergency value" of CW--"it can get through when nothing else can"-- is a strawman imho. Local emergencies are handled on vhf phone and when the recent hurricanes hit Central America, the FCC pre-empted spectrum on 40 and 20 in the phone bands for the emergency traffic, not CW. Years ago, enroute navigation for airplanes was handled by "flying the Beam". That archaic technology, as you know, has long since been retired and you certainly are not tested on it as a link to the past.

Regards, Andy K5VM

No one is saying he is a "hero" of ours. On the other hand, most people would not wish the physical suffering involved with his illness (and associated upset for his family) on anyone regardless of differences in political views, etc. By the way, he was neutral in the Gulf War.....he did not take offensive action on the US or its allies.

IMHO, you are as single-minded and myopic as the pro CW crowd.

Welcome to the W8MMQ Wire, for February 5, 1999! This newsletter is distributed weekly by W8MMQ and the Radio Society of Central Michigan, and is available free to all radio amateurs.
If you would like to receive this newsletter via email, or would like to be removed from our mailing list, contact Dan/W8MMQ at w8mmq@voyager.net. Your email will be answered as soon as possible.

In this issue: the FCC makes surprise inspections; the ARRL seeks ULS change; the FCC considers low power broadcasting; upcoming amateur radio contests; and much more!

THE FCC MAKES SURPRISE INSPECTIONS
On January 21 and 22, FCC engineers and legal staff surprised some North and South Carolina hams with an inspection.

Riley Hollingsworth, K4ZDH, who is the head of the Commission's amateur enforcement division, led the inspection, which was unannounced.

Hollingsworth told the ARRL, "Commission personnel inspected the stations of John A. Abernethy, K4OKA, an Extra Class licensee in Hickory, North Carolina, and Richard Whiten, WB2OTK, a General Class licensee in Easley, South Carolina."

The inspections resulted from numerous complaints about the two hams' activities on 75 and 20-meters. According to Hollingsworth, both Abernethy and Whiten cooperated with the inspections.

These are just the latest efforts by the Federal Communications Commission to "clean up" the amateur bands. Over the last several months, the Commission has made it clear that it considers violations of its Part 97 as a serious offense, and will endeavour to bring back "order" to the airwaves.

Alton Wilson, Information taken from the ARRL Letter, 1/29/99

The ARRL Seeks ULS Changes
The ARRL has asked the FCC to make some minor alterations to its impending Universal Licensing System rules. The ULS, being phased in by the FCC throughout 1999, will consolidate application forms and procedures for several FCC services. Among other things, it will replace the venerable FCC Form 610 series with a new Form 605 and will provide for electronic filing, modification, and renewal for amateurs.

The ULS Report and Order was issued last October by the FCC, which also took the occasion to amend the rules to make it easier for foreign hams to

operate temporarily in the US.

In a petition for partial reconsideration, the League said it wants the FCC to continue to issue paper license documents; to come up with a way for applicants not having a Taxpayer Identification Number -- typically a Social Security Number -- to meet ULS requirements to provide one; and to include on Form 605 a section for Volunteer Examiners to certify that an applicant has met the requirements for a new or upgraded ham ticket. In addition, the League plans to ask the FCC to restore wording in Section 97.15(e) that references the limited federal preemption, PRB-1. The section was inadvertently deleted during the Commission's redrafting of the rules to accommodate the ULS changes.

The ARRL already has expressed concerns over FCC suggestions that the agency might do away with paper license documents altogether and rely instead on the "license grant" -- the virtual document that resides within the FCC's computerized amateur database. In its latest filing, January 12, the League said that in some states that regulate possession of scanning receivers but exempt amateurs, inability to produce a license document could result in "arrest and criminal prosecution as well as seizure of equipment by local law enforcement." The League said hams operating overseas also often must produce a paper document. The ARRL noted that the CEPT agreement requires US hams traveling in CEPT countries to possess a US government-issued license document and that ITU regulations "appear to require" a government-issued license document.

The League also called on the FCC to devise a means for those not holding a TIN -- such as foreigners who hold US ham tickets -- to comply with the ULS rules which require an applicant to provide one. "One possibility for these persons would be for the Commission to issue them some substitute TIN or some other type of registration number," the League proposed.

Finally, the ARRL pointed out to the FCC that neither the main Form 605 nor the Amateur Radio Schedule D contains a section for VE certifications and called on the Commission to modify the form to include the section as it now appears on Form 610.

The FCC Considers Low Power Broadcasting
by JEANNINE AVERSA, Associated Press Writer

WASHINGTON (AP) -- The government took the first step Thursday toward creating a low-power, low-cost radio service that would help community groups, churches, students and ordinary people get on the air. The Federal Communications Commission, in a 4-1 vote, offered proposals to create thousands of new, licensed low-tech FM radio stations from 1 watt to 1,000 watts. It would reverse a roughly 20-year old ban against such licenses.

The proposals "could create a whole new class of voices using the airwaves .. . opportunities for churches and community groups . . . so many of whom feel that they are being frozen out of opportunities to become broadcasters," said FCC Chairman Bill Kennard.

The FCC's action also responds to consolidation in the radio industry, which has made it increasingly difficult for minorities and community groups to make their voices heard. A 1996 law triggered rapid consolidation in the industry by relaxing limits on the number of radio stations held by any one owner.

In the last year, the FCC has received 13,000 inquiries from city governments, schools, churches and others wanting to start a low-power station.

The FCC proposed that those who want to start a low power station would have to meet the same licensing standards as existing higher-power FM stations. To get a higher-power license, companies generally must show they want to serve a particular area. They must also provide information about any past criminal record. The process wouldn't automatically disqualify a person or group based on their political views -- even if those views are white supremacist, for example, or offensive in some other way, FCC officials said.

And, although the proposals don't bar pirate radio operators -- people who illegally operate stations without a license -- from getting a new low-powered license, the FCC's proposals indicate that pirates who refused to follow FCC orders and shut down their illegal stations could have a tough time getting a low powered license, FCC officials said.

The radio industry opposes licensing new, low-powered stations, saying the move would create interference with other radio stations. Sharing those concerns, Commissioner Harold Furchtgott-Roth dissented from the plan.

Kennard, a strong supporter of the new licenses, countered these fears, saying his agency will protect existing radio services. "Will we create a class of new low-power stations that will wreak havoc in the FM band? Of course we won't do that."

Low-powered stations are cheaper to build because the equipment isn't as expensive. In addition to avoiding the big expense of building a tower for antennas, stations likely will have an easier time getting zoning approval for smaller rooftop antennas.

Costs can be as low as $2,500 for a 1-watt station to $100,000 and up for a 1,000-watt station, FCC officials said.

And, depending on the height of the antenna and the terrain, a 1-watt station typically serves an area with a diameter of about two miles -- and a 1,000-watt station an area with a diameter of up to 18 miles.

"This permits people who have felt abandoned by commercial broadcasting to use an inexpensive medium to create an audio soap box for discussion and debate," said Andrew Schwartzman, president of the Media Access Project, which supports the new service.

The proposals are subject to revision, public comment and another vote before they would take effect. The FCC is supposed to seek public comment on whether the stations should be non-commercial, commercial or a mix.

(Harry here with an editorial comment: this is sensational news! While I'd rather see a broadcasting service with no licensing restrictions, this is a quantum improvement over the status quo. I urge you to write the Commission and your Congressional representatives in support of this proposal!)

Upcoming Contests and Events
For the latest amateur radio contest information, visit the ARRL's Contest Calendar, at http://www.arrl.org/contests/. Also, for the latest information on upcoming events and hamfests, visit the ARRL's Hamfest Calendar, at http://www.arrl.org/hamfests.html.

Coming up this weekend, the North American Sprint, phone portion, will run from 0000 to 0400-Z February 7 (local time on February 6). The CW portion will be held on February 14 (local time on February 13). Operate 80, 40, and 20-meters only, phone only! For more information, visit http://www.vramp.net/~ncj/.

The Ten Ten International Net Winter Phone QSO Party, will run from 0000-Z February 6 until 2400-Z February 7. Contacts must on 10-meters only, phone only!

The YL-OM Contest, CW portion, sponsored by YLRL, will run from 1400-Z on February 6 until 0200-Z on February 8. Everyone is welcome to participate. Men call "CQ-YL" and women call "CQ-OM." For more information, visit http://home.earthlink.net/~tenmtryl/ylrl/.

Also this weekend, the Spring Classic Radio Exchange, CW and phone, sponsored by CX Newsletter. The contest will run from 0000-Z February 7 to 0400-Z February 8. Operate 80, 40, 20, 15, and 10-meters. Work stations once per band, mode and equipment combination.

DX Report
From Tromelin, FR5ZQ/T will be active until the 3rd of March, on 40, 20, 15 and 10 metres, possibly between 0900 and 1300UTC. This counts as AF-031 for the RSGB Islands On The Air Award Programme.

From Chagos Islands, VQ9DX is operational again, possibly for the next four months. This counts as AF-006 for IOTA.

From Polynesia, FO/DJ4VW is active until the 20th of February. This counts as OC-067 for IOTA.

And from Aruba, P4/K2LE is on the air until the 14th of February. This counts as SA-036 for IOTA.

The DX news reports listed above came from the weekly RSGB DX News Sheet, editied by Chris Page, G4BUE.

Ed, the CW ID requirement is idiotic. The software is freely available and free. If the FCC is so worried, tell them to download it ! Bureacracy like this is why hams rarely create new modes.

And the anti-CW croud isn't myoptic and single-minded I suppose?
Personally, I could care less if code was totally given up on as a matter of testing. I do use code, however. Don't even have a mic plugged in to my rig. Don't have to listen to the crap down in the cw band that goes on in the phone bands and on the repeaters.

Have you contacted the NPR station to see if they can supply the details?
This might work especially if they made any comment about the song.

Perhaps asking in a jazz-related newsgroup, I have no idea which one,
would turn up something. It sounds interesting as a musical piece,
so perhaps its something other people are familiar with.

>are not really subcarriers at all; hence J2B would apply.

I don't think you can interpret it that way. You have multiple
angle modulated subcarriers amplitude modulated onto a
single (suppressed) main carrier, so 7 is the proper designator.
If you want to treat it as a single analog composite signal, then
you'd have to use J3B. But you can't do that because the tones
have discrete spacings, and thus aren't analog, so that's
inappropriate too. A case where that would be appropriate is
FAX, which is J3C.

J2B is functionally the same as G1B, and can be used
interchangeably with it, just as J2A and A1A can be used
interchangeably (most modern rigs actually generate A1A
via injecting a tone in the modulator, so they can also be
called J2A, but the result is functionally equivalent to AIA
on the air).

G1B/J2B describes PSK31, but certainly doesn't describe
MT63. The multiple tones make it J7B. (You can't call it
G7B, though that's tempting to do, because the subcarriers
aren't phase modulated onto a main carrier. There doesn't
appear to be a primary designator for multiple independent
phase modulated carriers, so equivalences of the AIA/J2A
sort aren't possible.)

Actually, the G rated movies *don't* make the sort of money that PG-13 and R rated movies make on average. That's why so few G rated movies are made. Rarely, there's an exceptional G rated movie that does well, but most G rated movies fall flat on their faces at the box office compared to the average R rated movie. And it is the average that keeps the seats filled, and the bankrolls of the movie makers thick. The folks in Hollyweird may be a lot of things, but they aren't stupid about what brings in the money.

Unfortunately, cars don't usually have easily accessable circuit breakers
for this purpose the way aircraft do. So you usually can't kill the power.
I'd be pretty cautious about transmitting in such a situation, however.
One spark and you're toast.

There is an enormous amount of censorship. Virtually no theatrical movie
made in the last 20 years can be aired without extensive editing to satisfy
the censors. Even classic cartoons have to be butchered to get by the
censors. Meanwhile cable can show the same programs uncut. You can't
compete with that.

Alas one of the problems with being a Dyslexiod Apshic is that
sometimes one does see what you mean't to write wther you really put
in to or not. I do apoligize for any confusion that cuased.

To make my point perfectly clear. I feel the only Morse Code
that Must be know by a ham is SOS, and that it is within the Power of
the US governement to so implement the treaty language. Each Nation
is empowered to make those decisions for itself.

James W. KELLEY wrote:

:I don't mean to sound smug Dave, but if I heard someone say "mayday" on an
:amateur radio repeater I would be inclined to think that we had an
:unlicensed operator or a crackpot on the frequency. I would be loathe to
:ignore such a call, but I would also have some trepidation in responding
:to it. Mayday is something pilots might say on a commercial or military
:aircraft frequency if they had an engine on fire or something. Perhaps it
:is also something someone might say on Citizens Band channel 19. But on
:an amateur radio repeater it is customary to give your callsign, ask for a
:control operator, and state that you have emergency traffic. I expect
:that if anybody was around, they would gladly respond quickly and
:helpfully to that sort of call. I could be wrong, but I doubt the ARRL
:Operators Handbook recommends calling "mayday" on an amateur frequency.

Acording to the ARRL publication 'Operating an Amateur Station' under the
Section: 'Amateur Radio Emergency Service' it reads...

On CW, SOS (without spaces) is universally recognized but has some legal
aspects that should be considered where the need is not truly crucial. On
voice, one can use "MAYDAY" (universal, the phone equivalent of SOS) or, to
break into a net or conversation, the word "emergency."

Which makes things interesting; the Australian Communication
Authority's web site doesn't mention 7 for the middle digit
(only 1, 2, 3 and 8), and so J7B isn't listed in the allowed
modes for HF..

The multiple subcarriers are produced by modulating the main
carrier with a single audio signal, though, so perhaps they
are not really subcarriers at all; hence J2B would apply.

Why would they want to do that? Knowing only SOS, what service would you claim to be able to provide to a station sending SOS? I guess you could send SOS back to him, or maybe start a T-hunt to try to discover his location. But the reason for sending SOS is to establish a CW contact with a station that could dispatch aid to the location of the station in distress. Doing that would necessitate knowing all or most of the letters and numbers - don'cha think?

>Why would they want to do that? Knowing only SOS, what service would you

Plenty

One I can run Computer decode software if they are sending
good morse.

Two if that fails or the station lacked that ability, I could
simply contact other hams til and tell them that there was a distress
signal on a given frequency.

Three. If I can't make the signal as is I could again using
the very same machine that is typing this a siganl to say so down a
bit or to try and boost you power a bit, or given my location and see
if the other party can improve the condcitions of the contact enough
for my computer to work it out.

>claim to be able to provide to a station sending SOS? I guess you could
>send SOS back to him, or maybe start a T-hunt to try to discover his

These are also possibilities. I suspect that they and what I
have posted are not the limit of the things I could do for this
station.

>location. But the reason for sending SOS is to establish a CW contact with
>a station that could dispatch aid to the location of the station in
>distress. Doing that would necessitate knowing all or most of the letters
>and numbers - don'cha think?

Why did you ask that question? Is not painfully obvious that I
belive that the answer is know. There are things I can for that
Station and indeed if I happen to hear an SOS while tuneing around. I
would make whatever effort I could to aid that staion. In my case that
reuires that I happen to have either My computer, or my phone (either
cell or non cell depnding on where I am0 or just my HT to get the
local repeater till I find who can help the poor souls out there using

SOS. All I need know is SOS indeed I don't even have to know which is
S and which is an O I just need to reconize the signal run together

That one seems to be out of print now. I wonder about its copyright date.
Point is, using "mayday" has apparently passed its "heyday". Neither RACES
nor ARES uses or recommends the use of the term. Plain english seems to
be the order of the day.

I knew I should have left out that last remark. ;-)

HI James but I beg to differ with you. A very few years ago one of our local folks was involved in an accident that could have been very serious. This amateur operator had been in the military for a number of years and when confronted with this situation did what he had been trained to do and that was to call MAYDAY. He was answered at once and help was summoned. A witness to the accident stopped and was able to free him from his vehicle that was leaking fuel and got him away from it. He was not hurt badly but knew that the leaking fuel was a bigger hazzard then the accident. I would encourage anyone to use MAYDAY in any situation where they thought their life was threatened. I agree there are plenty of nuts out there but I would rather respond to 200 nuts being funny then one person who was in grave danger. I alsways told my wife that if she ever need help pick up the microphone and call for help on the local repeater. She always said well ok but I knew she would have a hard time doing it. However one evening when it was about 30 below zero and her van quit she did just what I had asked her to do. She was answered at once by a local that knew her and they called me at once on the phone. She was pretty cold by the time I got to her and she was only about 5 miles from home. I would have gladly given up my license rather than have her freeze. As it was I did have to endure the stuff from the locals about the family membership. I was glad to endure it. 73's Larry WA9VRH

>DIT DIT DAAAAAH DAAAAAH" (the Mother Of All Insults on the maritime
>bands).

I don't understand this reaction. Sure, he's sending a bit faster than he
can receive, and maybe that's because he's new, but a polite request to
"please slow down" doesn't merit a sarcastic and insulting response from
a more experienced ham. Surely this type of thing is not an uncommon
phenomenon. In fact, why would the QRS request even exist if not to handle
a situation such as this? Wouldn't the QSO be more rewarding for both
parties if he simply complied with the request?

It seems as if every facet of amateur radio in the United States is an
exercise in one-upmanship.

If that's what it took to get a license for 40 Meters, I would learn French.

Instead, it takes CW. So I learned CW.

Hams could get a local sound bite of their own if they wanted to.

In my other life, I volunteer at a local public-access TV station
(Salem Access TV) that broadcasts over the cable system in Salem,
Mass. There are many other stations like it all over the US.

I've worked on many productions over the five years I've been there
and have elmered no small number of crews in the art and techniques of
TV production.

The value of that facility is *incalculable* in terms of goodwill and
community togetherness. In my five years, it has been everything to
me that ham radio has not been in nearly 8 years licensed. Esprit de
corp, friendship, continual learning and *true* hard work. All of
those and more.

What has this to do with hamming?

For a long time, I've dreamed of getting together with some local hams
to produce a PSA or even a regular program about ham radio. Media
watchers know that such a program has always been difficult to
sponsor, given the demise of Len Winkler's show.

With only a few hams--plus *lots* of energy and true hard work--such a
show is definitely possible. My access center provides free training
for anyone living or working in Salem who's willing to put up the cost
of a good dinner. Any Salem-based ham should know that if they walk
in the door at SATV, I *will* train them personally. Their heads may
be spinning afterwards but that's TV for you!

And there are many other access stations like it across the country.
Most hams could handle the technical aspect of TV production, easily.
The artistic aspect is tougher but if you can tell a story at your
club meeting and engage your audience, you are halfway there.

And once it airs, it doesn't stop. If it's a good production, it can
run everywhere. Imagine getting footage from a balloon flight! Or
camcorder documentaries of an emergency situation. Never mind Field
Day (though some FD's may be blooper video :)). Once it's taped,

there's no end to the potential.

So why haven't I done this? I've had negative experiences with the local club; a close friend--and elmered student of mine--was treated rather badly. I'm now afraid that there may not even be enough hams around Salem to mount such an effort. Meanwhile, there are other groups and causes asking for my involvement.

Such is the bitter fruit of *years* of inattention, of assuming that the Good Old Days were good enough and all there needed to be. "Leave me *alone* in *peace*", is what some here are saying.

Peace of the grave?

Take care,

Dave

Yeah, that's a big help. "Wait 'til I fix my computer and I'll get back
to you." Or you could just tell 'em to send really really slow so you can
look it up on the Morse code chart. :-)

>>I guess you could
>>send SOS back to him, or maybe start a T-hunt to try to discover his

Hey Mark. I'm in total agreement that if you can work the guy by whatever means you and he have in common, you're all help he needs. I just think you make _way_ too big a deal out of learning 26 letters, 10 numbers, and a couple prosigns for an upgrade to an amateur radio license. We've seen here that CW is not _completely_ worthless in amateur radio. It continues to be a valid and at least semi-useful way to communicate under difficult circumstances. But I guess that resistor color code is a real bitch to remember too. And how can you ever remember where all those keys are on your keyboard? Wow.

I just don't understand why someone would rail on and on about how ham radio operators should essentially have less ability, and should essentially have one less way in which they are able to communicate. What a goal to strive for. Less is more! No. 5 WPM maximum is a better goal to strive for. Be happy with that. It's a _good_ thing. It's only when ham radio operators _know_ the code that they can use it if they want to.

==========
Subject: HOORAY !!!! Code is dead !
From: "Alan Graves" <alankg@siscom.net>
Date: 1999/02/01
Newsgroups: rec.radio.amateur.misc
Finally, the last official use of that throwback to the past, CW, has as of today officially been discontinued by the maritime community. Seems the only remaining users of this dinosaur is those hams who refuse to give up this once important but now archaic waste of bandspread.
==========

This can across on the BARC list today (Feb. 5, 1999), and I thought I would cross post it here.

Bob

In reply to Greg's post to several NE Div mailing lists (quoted)
>FYI.......Sunday Boston Globe Newspaper.......Bottom of Front Page.....
> " For Ships , End of the Dotted (and Dashed) Line."
> Updating of ships (above 300 gross tons)
> communications equipment systems to satellite makes MORSE Code a mode of
> the past in marine communications and several threads on other lists,

The media has it all confused. Official watches by various national coast guards were dropped a while ago. Each time there was a flurry of "Morse Code is officially dead after 160-some years of use" stories. This week, the only change was the U.N. adopted the satellite systems as the primary distress mode over Morse officially, ratifying prior action by its delegated responsible body, the ITU.

International Morse/OOK/CW remains in use by older ships registered under flags that do not require up-dating of systems, and will remain so until they all sink or go to the breakers dock. Globe Wireless(R) continues to advertise Radio Telegrams with a an icon of a J38 key on their webpage,
"Ships equipped with a Radio Officer skilled in Morse Code can
send and receive Radio Telegrams through our CW Super-Station(R).
For more info, click here.
http://207.214.103.2//telegram.html" on page
http://207.214.103.2//mcs.htm . Globe Wireless's motto is "Providing the reliable, inexpensive alternative to satellite communications".

In the past, their website has had help-wanted for CW operators; at the moment, they're only soliciting for installers for HF/SSB and GMDSS (posted

last August). They'll probably still be in the business of delivering marine traffic by CW long after ATT is out of the marine SSB business which may be soon, according to rumors in Monitoring Times.

I've had the same problem on many ham programs that rely on timing. I used to use jvfax 7 for sstv on a 386/33dx. It worked fine, when I upgraded to a 486/80 it would not time properly no matter what I tried. The wefax programs had the same trouble. I can just imagine what would happen on the current K6/300/100 . Never tried, but I'm sure it would go ballistic.:<. I keep my old 386 just for sstv etc. MK

3004. CEPT in USA when??

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-06 00:00:00 UTC
From: mauricea.nobrol@glo.be
Message-ID: <36bc10b3.1194021@nntp.z052.glo.be>
Source record: 151401

Hi,

How is progress on CEPT in the US? I read a while ago that the US
would join CEPT but that it would take 3 months after signing the
agreement for CEPT to take effect.
I will be in W4 in July/August and wonder if I will still need to
apply for an 'alien' licence.

Thanks.

bye Maurice

Um...last time I checked, CB was still a form of "communication" and a very popular one at that. The name of the magazine is "Popular COMMUNICATIONS", not "Popular Ham Radio and We Don't Care about Anything Else." If you're a typical ham operator who doesn't acknowledge nor care about any form of personal communications other than your own, I suggest you contribute your $34 to Oldington and bury your face in QST instead. The magazine for "real hams", after all.

(I agree with every word, but he was too mild-Burt K1OIK).

You ham radio ops are a bunch of cheap skates. You're always trying to screw us commercial dealers out of a radio or repeater for some stupid project of your own. Most of your repeaters are all closed and are absolutely worthless for emergency use. You all claim to be such a big help in emergencies. WELL YOU'RE NOT!!! Hams can't and don't contribute anything to disaster relief any more.

All you do is whine and moan about how much a piece of commercial equipment costs. Well that isn't entirely true. You do go to hamfests and whine and moan to vendors about how much their equipment costs as well. You idiots have absolutely no idea what goes into the design production and marketing of any piece of gear, commercial or not. I truely feel sorry for any poor bastard that relies on making a living from you cheap SOB's.

Why not give us legitimate commercial interests your VHF, UHF and SHF spectrum so that we can do something useful for mankind instead of letting a bunch of retired has beens have access to billions of dollars of spectrum for nothing more than comparing prostate troubles during the day when the rest of humanity is doing something useful... like working for a living.

I'm sure to get some flame mail over this so I might as well make it good... You guys are worse than CBers. All you do is bitch about code requirements and how hard the tests are to get a license. Well I got news for you. You hams should be relegated to about 400 KHZ of spectrum in the 20 meter band. It should be allocated into 40 distinct channels 10 KHX apart. Maximum power 5 watts ERP. All testing and call signs should be revoked and every 18 wheeler should have a mass production, $50 20 meter ham rig installed. Then I suppose you all could bitch about paying a whole $50 to whoever is desperate enough to get into that market.

3015. Info on RCA Transistor

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-06 00:00:00 UTC
From: rickw999@aol.com
Message-ID: <19990206065534.17898.00000486@ng-fx1.aol.com>
Source record: 151412

Ever see one of these radios? It has a silver/metal front, kind of slants back, green plastic body, says RCA Solid State on bottom left corner, says Radio Corporation Of America on top left, three knobs bottom right, tone switch on right side, wall wart plugs into back(6 volts), takes six C batteries, about 1/3 smaller than a GESRIII (5 by 7 inches?) Very heavy for it's size. My guess is early sixties. It is pre-IC chip technology for sure. All the inside guts a tightly packed and have good workmanship. It has a big MW loop stick inside that goes from edge to edge, and seems to be quite sensitive. On FM, when retracting the whip, the signal distorts? I was thinking maybe a certain type of circuit design would cause this to happen. I am interested in finding some info on it. Thanks Rick

>As for adding a BFO to get better resolution, there are limits to the
>practicality of that scheme.

The reason I'm adding a BFO is because the YB305 doesn't have one. It's not so I'll get a better tuning resolution. I need the finer resolution so I can tune in to sideband signals. Right now, at 5kHz steps, I'll be un able to hear sideband signals that are inbetween the 5kHz steps. Any ideas on how to achieve a 1 kHz resolution from the 5 kHz tuning steps?
Rick

Jim, my policy is to ignore horseplay on repeaters - I won't feed their hunger for attention. However, if I heard "MAYDAY" I would certainly answer it and respond - even while keeping a healthy dose of skepticism. I would rather be made a fool of than risk letting someone die.
I think this is why most police departments quit listening to CB emergency channel 9 - they got too many crank distress calls and could no longer afford the manpower to indulge the idiots.

The IC-781 is regularly modified for military use by getting turned into the signalone. I was wondering if anyone knew if any companies do this with the yaesu FT-847? I want a "wonder radio" that is tough enough to fall off the back of a truck on a dusty dirt road, and still be fully funtional. even if it takes a special container. Low power consumption is a plus.

> entirely. Not a given, at all.

Several things do help out though. The tuning display naturally
integrates over time, which does enable you to find signals which
are very weak. Because of the phase reversals, PSK31 generates
two side bands, separated by 31 hertz or so. Your eye is pretty
good at finding those, and since you can retune the digital detector
rather than your radio, it actually works pretty well.

Your point about levels is essentially what I described in my last posting,
if you have too much noise in the input, it desensitizes to weak signals.
That is why narrow filters can be of help. And of course, too little
gain is also a problem as well.

> Well, I have the computer, the radio and the program. On
> the occasions when I can persuade all three to agree on what
> to do in coordination it DOES work. But it seems the "easy
> simplicity" of PSK31 has been a bit overstated.

It will come as no surprise to you that I believe the easy simplicity of
Morse has been a bit overstated as well.

==========

>> I don't know why so many people are talking about Y2K for no reason.

>Perhaps there is a reason. You may have to dig a little deeper to find it.

>You can start digging at www.yourdon.com.

And he does not tell us anything except he sells his book and a lot of
publishers support "myth" of Y2K. This myth is similar (i.e.
people's reaction) to UFO sighting of 50 years ago.

Unforutnately, with present preparedness, I am going to warn people
that Y2K does NOT cause any problems whatsoever if the electricity
keeps running. Some computers may mulfunction for thinking 00 as
year 1900 but what's so big deal ? I guarantee you that computers
are not going to explode (unless you set it intensionally). My
computer will work perfectly and nothing happens whatsoever. I tested
everything. If you think computers are going to crush and explode
in year 2000, you must experiment by yourself... which you haven't
done.

Your books will not disappear and your friends will not
disappear on January 1, 2000 at 0:00. Stock Market will go down in
December for fear of Y2K, which I will take the advantage of panickee
people as described in http://www.radiotelephone.net/monrymkr/ to
make short term profit. Cars will not disappear and engines
will not stop working because of Y2K. Telephone companies will
NOT stop charging you because of Y2K. Airplanes do NOT crush
because of Y2K. (Without air traffic control, airplanes still can
fly anyway... what's the point) All the airplanes do NOT explode
because of Y2K unless someone sets up so intensionally (cult ?).
Get reality. Traffic signals will NOT fail. They don't even "know"
what today is. All of my clocks keep working for year 2000.
Obviously analog clocks will not fail. Yours ? Y2K does
NOT change the weather pattern. There will be spring, summer, fall
and winter as usual in the year 2000. Agricultural activity will NOT
be destroyed because of "Y2K." What does it mean ? Foods will be
available in Y2K (take care of population explosion. probably that's

more important than Y2K.) Everything will NOT fail as long as electricity will be in Y2K. If there will be no electcitiy, it's clear that computers will not work, you can't eat much stuffs and cars will stop working because of no available fuel. Without electricity, the heaters will not work and airplanes will be grounded for good reason. Water cannot be used in many places if there is no electricity. Everything becomes chaos if there is no electricity -- just like last year's ice storm.

Now I proved that nothing would happen all the sudden at Y2K. Please prove that everything fails. At least I proved with all of my equipments, assuming that electricity will be in place. If there will be no electricity, that's completely different story. The authors of Y2K myth-books never look at the reality. They never look at the simple fact that electricity will cause a major problem, if there is a problem. I saw an article at cnnfn.com that some people are taking the advantage of Y2K by selling "Y2K emergency kit" at $200. If you have money to spare in such thing... probably you should buy a generator and enough fuel for a month or so for generating the electricity (than the pieces of matches and etc., in the emergency kit.) Get the reality... At least my pentium computer will keep working. Any business super computers fail ? Not a chance.

They probably picked CW because it uses so little of the bird's resources and it would be nice to have the same datastream readable by both machine and humans. The amount of data is probably not so much that high speed throughput is necessary. Good thinking on somebody's part. Thanks for sharing.

BTW Steam is still used in quite a few ships. In some applications low speed deisel is appropriate. Some ships are best powered by Gas Turbines. Steam Turbine also shines in appropriate applications, and should not in any way be considered low-tech. Get your 1080 days of seatime in engine rooms and go sit for the Third Assistant Engineer, Steam exam if you think it is.

Indeed. Here in the US, it is illegal under 97.3(c)(2) or 97.3(c)(7).

Now put that in perspective and list the number of diesel/electric
locomotives in daily service versus the number of those restored
steam locomotives in daily service (very few of those 215 operable
steam locomotives are actually in daily service).

There is a great deal of nostalgia for the steam locomotive era,
but the cold fact is that steam locomotives disappeared rapidly
from daily service as soon as diesel/electric units became available.
Diesel/electrics are cheaper to operate, easier to control, and are
easier on the track than the steam behemoths they replaced.

Source record: 151185

http://home1.gte.net/rmcrusoe/numorse14.zip

That's a file I just uploaded to my gte directory but I have not yet put the link to it on my html documents, so use the above url instead of going to my index page first. I'll link it tomorrow, maybe. Meanwhile this should get you the file. MSIE (if you have WINZIP or another windows unzipping utility installed) will give you a choice of opening the file onsite or downloading it to your HD. Go for the download, then open it on your drive, so if you mess up or change something you have the zip file right there and won't have to download again. It is less than a meg.

NuMorse is a native windows program and you will have no trouble with it on your machine. This program is shareware, and is somewhat crippled in that throughput is limited to 10 WPM, though you can nudge up the character speed to 20 WPM. Registering removes the speed cap. Good flashing light feature, too. The flashing light can be maximized. While not as versatile as Supermorse, it is a lot easier to run on fast computers. Should answer the needs of an aspiring novice or tech who doesn't have a 486 or lower computer available, or who wouldn't know DOS if it bit him on the ass. Hope this helps.

The advantage of the DJ5CT is that this little dual-bander has a
reasonable internal speaker. For normal use, the volume level is quite
adequate. For automobile use, you need to use the highest level of
volume (0-7 on a digital scale). A nice little radio, but it's still
about twice as expensive as the single band versions.

SB DX @ WW $OPDX.395
Ohio/Penn DX Bulletin No. 395

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 395
BID: $OPDX.395
February 8, 1999
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, ARRL DXCC Desk, AA1M, AD1C, K1DW, WB2RAJ/WB2YQH & The 59(9) DXReport, NG3K, W3UR & The Daily DX, K4MA, N4GN, N4XP, K8JP, K8PYD, KU9C, W9RN, G4BUE & DX News Sheet, HA5PP, JM1LJS, OH2BH, PA3BIZ, PT2NP, PY3PAZ, VK4FW and YO2LDE & South-West DX Bulletin for the following DX information.

DXCC NEWS FLASH. If you are not a OPDX InterNet Subscriber or read the ARRL Bulletins than you missed that a "New DXCC Entity Was Added". Palestine will be added to the DXCC List effective October 1, 1999. Contacts made with Palestine (callsign E4) stations after February 1, 1999, will count for this new entity. Under the DXCC rules, contacts with the deleted entity of Palestine made prior to June 30, 1968 do not count for this entity. There is no commonality of territory or administration.

3A, MONACO. Last week we mentioned that Leo, K8PYD, will be active from February 18th to March 2nd, possibly as 3A/K8PYD. Leo now tells OPDX that Tom, N9NC, who previously operated as 3A/N9NC during the CQWW CW Contest, will be joining him in Monaco February 19th for a week. Tom will only be free during their evening hours after work. He plans to work 40, 80 and 160 meters CW. Leo also mentions that either or both of them may join in the contest the weekend of February 20-21st.

3B8, MAURITIUS ISLAND. There is plenty of activity from here. Hans, 3B8/DJ7MI, has been very active on 160/80/40/30/15 meters. His activity will continue until February 20th. QSL via DJ7MI. Jacky, 3B8CF, seems to like 30 meters a lot lately, check around 10103 kHz between 0230 and 0330z. The "South-West DX Bulletin" states that 3B8GD has been very active on the weekends on 28495 kHz and 18145 kHz. QSL via 3B8DB.

5H3US PHOTO GALLERY WEBSITE. Jim, AD1C, states Dave Heil, 5H3US (K8MN), sent him some pictures he snapped with his digital camera. These picture can be viewed at: http://jjr.ne.mediaone.net/5H3US/

7O, E4 AND P5, YEMEN, PALESTINE AND NORTH KOREA (HA5PP Projects in the works......). Zoli, HA5PP, writes to OPDX that he has been in Yemen twice in 1998, and is still trying to get permission to operate. He continues to work with Yemen's General Director of Ministry of Communications (MoC), Abdulgader Ibrahim, on a plan and an application to reactivate amateur radio in Yemen. Zoli feels the process is slow, but is close to having 7O back on the air. He tells OPDX that he just needs a little help to convince the "MoC". Zoli has requested that the OPDX readers and the DX associations call or FAX Mr. Ibrahim, and ask "What is the status/progress of amateur radio in Yemen." Tell him the world's amateur radio operators are anxiously waiting the return of amateur radio in Yemen. Also, state that you support Zoli's efforts to help re-establish amateur radio in Yemen. Zoli states that he can set up a nice amateur radio station with the coordination of some USA/Europe/Japan organizations. Here are General Director Abdulgader Ibrahim's phone numbers:
Home Phone: 967 1 321900
Office No.: 967 1 331455
Fax Number: 967 1 331455

In Zoli's letter, he also mentions that he is also thinking about going to E4 (Palestine) soon. This is currently in the planning stages and more details will be coming out later. Sponsors and donations will be welcome.

Zoli's letter to OPDX he states, "It seems to me, the hams have given up that the P5 will be on the air "again". I know that this is crazy trying, but I will try P5....." Zoli states that plans are in the works to visit North Korea. He also has mentioned that he is looking for sponsors to help fund a short operation (which may last only a few days). He feels the time is right. "GO FOR IT!", are his words he tells OPDX. If you are interested in helping Zoli, he can be contacted by E-mail at: navus@mail.matav.hu

8P, BARBADOS. Jim/K4MA and Will/AA4NC will be active as 8P9JA and 8P9JB respectively from February 17-22th. They will operate the ARRL DX CW Contest using the callsign 8P9JA as a Multi/Single entry. QSL to home callsigns.

BT1WW CQ 160 WRAP-UP. The following is an excerpt from a press release by Tim Totten, N4GN, written by Martti Laine, OH2BH:"..... The People's Republic of China indeed appeared on 160 meters in this past weekend's contest. The U.S. pileups were huge but unfortunately so was the noise level in Beijing. While congratulating those 24 U.S. stations who made it through, the gang in China also wants to apologize for those who kept calling." The lucky stateside stations are: N7RT, N6RO, W6UB, W7TVF, N6FF, W6YA, K6VX, W2VJN, K6SE, W6UE, N6ED, W6AJJ, N2KK, WU6T, KF6T, N7UA, K6UR, KG6I, W6PBI, W7IUV, KC7V, W7XR, N7DD and AB6LF. The greatest signals were N6RO, N6FF and W6AJJ. You can QSL to: Martti J. Laine, Unit No. 21H North Lodge, China World Trade Center, No. 1 Jianguomen Wai Avenue, Beijing 100004, People's Republic of China. Your observations are also welcome to the following two e-mail addresses:
martti.laine@nmp.nokia.com

crsa@public.bta.net.cn

CE, CHILE. "The 59(9) DXReport" states that Jack, WA0RJY, will be traveling in Chile during February and hopes to be active for about 5 days. He will probably be active as either CE/WA0RJY or CE/K7ED. QSL via WA0RJY.

DXERS LOSE A RARE ONE. He was not a rare country, a rare IOTA or even a special event station, but a King of a country. DXers who have been around for a few years (or a few decades) knew that working the King, JY1, was a rarity, honor and an accomplishment. For me (as your editor) working the King, was one of my favor highlights as being an amateur radio operator. It is not everyday that a leader or King of a country that would take the time to talk to you on amateur radio, but King Hussein of Jordan gave us that chance. Even though it was rare, the King has been heard on HF, and he even made a contact with the Space Shuttle via VHF. King Hussein's, JY1, signal on the ham bands will be dearly missed. The 63 year old monarch, peace-maker, who was treated in a U.S. clinic for a relapse of non-Hodgkin's lymphoma, was pronunced clinically dead, but was kept on life support after the collapse of all his major organs, except his heart. He became a "Silent Key" (SK) as this bulletin was being prepared. OPDX would like to send our deepest sympathy to King Hussein's wife, Queen Noor, and the family.

E4, PALESTINE. Reports indicate that Ali, JY4NE, has mentioned that he will be active from Palestine. He states, that the Ministry of Tele-communications in Palestine has not issued ham radio licenses yet, so he is still waiting. He think his callsign will be E44A, but he is not sure. Ali says to keep on checking his Web page for up-to-date info at: www.angelfire.com/ny/JY4NE/index.html
Other sources state Ali will be active possibly February 20-21st or February 27-28th from Gaza, QTH of ZC6B. Activity will be used on the highest open band. Operations will be SSB and some CW. Possible callsign may be E44E.

FO, FRENCH POLYNESIA. Look for Helmut, DJ4VW, to be active until February 20th, as FO/DJ4VW. His activity will be mainly on 20 meters SSB. He will be on the Island of Raiatea (OC-067). QSL via DJ4VW, direct or the bureau.

JD, MINAMI TORISHIMA. The "DX News Sheet" reports that Ryochi, JL1KFR, is active again until February 15th, as JL1KFR/JD1. Activity will be CW and RTTY, especially to Europe and North America. QSL via home call.

QSL INFO AND NEWS.....
OY1CT QSLS. OPDX has received information that several sources are stating OY1CT QSLs can be obtained via F6GNG; this is wrong. OY1CT has stated that "he has ALWAYS handled his own QSLs direct". So, please QSL direct ONLY to OY1CT.

QSL Manager Kevin, VK2CE, (manager of VK9NX) has a new address. Please check your data bases. The address should be: Kevin Mulcahy, POB 300, Merrimbula, 2548, Australia.

BQ9P QSLS. It is being reported that these cards should be coming out sometime in February. QSLs will be a full color folding card.

XX9X/XX9TAR/XX9TMC/XX9TNC/XX9TOT/XX9TXD QSL CARDS. Steve, KU9C, reports QSL cards for the various XX9 operations in October, 1998, listed are beginning to hit the mail. He states that he is about 1/2 way through the pile, and hopes to have most, if not all, out early next week. However, he does mention that if you sent your card with others, such as B1A, BT2HC, BQ9P or many of the other stations that he manages, this will slow their return to you. He expects to be mailing these cards out during the month of February as well.

PA6, NETHERLANDS. Bill, PA3BIZ, PR Manager of the VRZA (Dutch Radio Society), wants to remind everyone that the PACC Contest (160-10 meters) will be held next weekend February 13-14th (1200-1200z). Also, look for their club station, PI4KGL, which has received the special callsign PA6V for the contest. All QSLs go through PI4KGL and Dutch bureau.

PY0S, ST. PETER & ST. PAUL ROCKS. Paul, PT2NP, ABRA Director-Secretary, informs OPDX that the ABRA-DX Brazilian Association will be going on another DXpedition to St. Peter and St. Paul's Archipelago (formerly known as St. Peter and St. Paul's Rocks - PY0S). This operation will start March 15th or 16th and last until March 21st or 22nd. The ABRA team will include the following operators: PT2HF/Lunkes, PT2GTI/Stuckert and PT2NP/Paul. Operations will be on SSB and CW, but other modes are in the planning stages. The group will leave the port of Natal on March 10th, and will be back on the Brazilian coast between March 26th and 29th. QSL via PT2GTI. Paul also informs OPDX that this operation has no connection with the other group announced by Karl, PS7KM. More information is forthcoming. Paul, PY3PAZ, provides OPDX with the following PY0S information:
"These Rocks are a Federal Silvester Resource and there are about 4 Brazilian scientists living there for no more than 15 days at a time because of the bad conditions. On the Rocks, you have sun all day long, calm winds and the temperature reachs about +45C sometimes. Imagine how hard it is...The nights are sometimes warm but sometimes cold. The crew is changed every 15 days and the entire support comes from the Brazilian Navy..... It is quiet hard for a civilian group to go there. On the Rock, there is no place to be, no grass, no energy (only by batteries) and no potable water as well..... Only rocks everywhere."
You can also visit the ABRA Web site at: http://www.pt2dx.org.br
This site is written only in Portuguese, but at least you can enjoy the many photos from the four DXpeditions made by the Association to the following islands: Trindade, Coroa Vermelha, Martim Vaz and South Shetland-Antarctica.

S7, SEYCHELLES. "South-West DX Bulletin" reports that Kurt, HB9MX, will be active until February 27th, as S79MX from Mahe (AF-024). Activity will be on 40-10 meters. QSL via HB9MX: Kurt Bindschedler, Strahleggweg 28, 8400 Winterthur, Switzerland.

SPECIAL EVENT STATION. The Boland Amateur Radio Club will be running a special event station between February 27th and March 1st, to celebrate the 150th birthday of the L'Agulhas Lighthouse. The special callsign

ZS150LL (L'Agulhas Lighthouse) will be used on all the popular HF bands and all contacts will be confirmed with a very special QSL card. The L'Agulhas Lighthouse, built in 1848/49, is the second oldest lighthouse in Africa and the Southern most lighthouse in Africa. Boland ARC invites all lighthouse and radio enthusiast to pay a visit to their special station which will be active from a caravan parked right next to the light house.

T8, BELAU. Look for JA5AUC and JA5IU to be active as T88TM and T88SY, respectively, from Palau February 11-14th. They will be there on a mini vaction but activity will be on 160-6 meters CW/SSB. QSL via home callsigns and it is "OK" via the bureau.

V3, BELIZE. Joe, K8JP, and his wife Beverly will be driving to Belize, leaving about February 6th. They expect to arrive there about February 11th and return on March 9th. If all goes well with the tower and antenna installations, Joe will be operating the ARRL DX CW and SSB Contests as a Single Operator High Power All Bands and the CQWW 160 SSB Contest as a Single Operator High Power. Outside of the contests, Joe will be operating mostly on the lower bands, 160/80/40 meters CW with some SSB. Joe will use the callsign V31JP. He also mentions that he has a great deal of non-ham work to accomplish on this trip, so daylight hours will be spent on dealing with those tasks. He will be testing antennas on the higher bands. Also, on most mornings around 1200z, Joe can be found on 14165 with W2MIG and friends. QSL via Joe's new manager, Lonnie W. Miller, KA9WON, 12031 Blue Spruce Dr, Roscoe, IL 61073, USA.

V7, MARSHALL ISLAND. Tom, N4XP, states that he will be here for 10 days beginning February 27th. His callsign is not yet determined. He states that the low bands will be priority with 30 meters for Europe as well. QSL to home callsign N4XP.

VK9C & VK9X COCOS-KEELING AND CHRISTMAS ISLANDS. Just a quick reminder to look for W0YG, W8UVZ and WB9Z to become active from Christmas Island as VK9XX, now until February 13th and from Cocos-Keeling, February 13-20th, as VK9YY. Their activity will be mainly on 160/80 meters CW, the WARC bands both CW and SSB, and RTTY on 15/20 meters. QSL via W0YG. Also, Charlie, W0YG, states, "Please do not include VK9XX and VK9YY cards in the same envelope."

VP2E, ANGUILLA. Mike/W1USN, Bob/AA1M and Jim/W1HL will be enjoying a week in VP2E-land. Operations on CW and SSB are anticipated. Callsigns have not been assigned as of yet. Dates of the operation are March 1-8th. QSL to home calls.

VP2V, BRITISH VIRGIN ISLAND. Dallas, K1DW, informs OPDX that he is headed to Tortola, BVI, for three weeks starting on February 16th. His intention is to operate the ARRL DX CW and SSB Contests and the CQWW SSB Contest. During the non-contest times, Dallas plans to operate 160-10 meters on SSB, CW and RTTY. Dallas states, "I know that VP2V is not a rare country, but many may be looking to fill in countries for 5/6 band DXCC and RTTY DXCC."

3044. NEW SHOCKING EVIDENCE: ARRL in Bed with Equipment Manufacturers!

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-07 00:00:00 UTC
From: mikedn@conan.ids.net
Message-ID: <Ycpv2.194$7E6.463@news3.ispnews.com>

Recently, upon flipping through recent filings on the FCC's ECFS WRT
WTB Docket 98-143, I came across the following items:

Proceeding 98-143 Type Code: NO Date Received: 01/27/99
File Number: Submission Type: NOTICE Total Pages: 2
Filed on Behalf of: Icom America, Inc.
Filed By: Booth, Freret, Imlay & Tepper

Proceeding 98-143 Type Code: RC Date Received: 01/15/99
File Number: Submission Type: REPLY COMM Total Pages: 29
Filed on Behalf of: American Radio Relay League, Inc.
Filed By: Booth, Freret, Imlay & Tepper

For all practical purposes, it appears that the ARRL and ICOM both use the
same law firm to file their FCC NPRM comments.

I pose this general question for our esteemed legal experts to address:
Isn't it a conflict of interest for a law firm (for example, Phil Kane's
Communications Law Center) to be representing an organization (for
example, Kenwood) that has pecuniary interests in the outcome of an FCC
proceeding, yet at the same time be representing a non-profit
organization (for example, No-Code International) that is an interested
party which would have amateur radio's non-pecuniary interests at heart?

From my past dealings with lawyers, and my layman's understanding of legal
ethics, it seems it would be. *UNLESS*, of course, the underlying
interests of both the "for-profit" and "non-profit" organizations were the
same, in which case there is no 'conflict'. (e.g. two interested parties
end up working together a-la a 'class-action suit' towards a common goal)

If, in fact, that is true, then what conclusions can we make then
about the data from the FCC's web site shown above? Does this mean the
interests of ICOM, an organization that wants to sell more radios is the
same as the ARRL?

MD

> air TV...

I sure see a ton of it. I record hundreds of movies off both local BC
and non-premium cable and it's obvious they butcher the heck out of
them. I notice alot of times they dub in fake voices to override bad
language. And most of the nudity will be stripped out. It's the language
that I think takes the biggest hit. And they do edit to put the
commercials in too.MK

>Diesel/electrics are cheaper to operate, easier to control, and are
>easier on the track than the steam behemoths they replaced.
>Gary Coffman KE4ZV

Wow. What insight. Next your going to tell us why electric clocks work better than grandfather clocks. Or why modern cars work better than antique cars. You really have a hard time understanding why people might enjoy some of the older technologies. It certainly explains your disdain for hams who keep older stations and use older modes...

3049. Re: This an X-rated group now?... (was: Why different call-sign lengths?...)

The net isn't ham radio. The net is a very big city with all kind of strange types. You wouldn't let your kid roam about a big city unsupervised would you...

What do you mean by "21 wpm space to 13 wpm"?

My settings are now..
Lesson length: 15, Pause: 3, Word speed: 13, Character rate: 21
That anywhere near what you were recommending? ;)
I'm "sorta" confused...
Thanks.

Previously known as BD...

Hmm.. Maybe I'll just use the highest settings for each. That way, I'll
surely pass the test!

Set your computer to 9/8/99, Sept 8th, 1999 and let it roll over to the 9th (9/9/99). See if any of the programs you use come up with a cough.

We're so busy looking out for the Y2K bug that it's easy to forget that many programmers used 9/9/99 in their code.

If yours doesn't cough, you might be all set.

PCs are not the problem. The problems are the mainframes/minis running
COBOL written in the 70s.

Cecil,

Good point. My company has been in the process to convert from an old Wang minicomputer (which we can't even get new parts for any more) to a dual Pentium Pro server running Windows NT. The NT server will be on the same network as 3 Novell servers (2 local and one remote). The cost to rewrite the old COBOL code to bring it up to date was far to costly. Instead we are setting things up to run the company using a package from "Symix" http://www.symix.com/products/ running on top of a Progress database system. It was cheaper to go the NT server course and throw away the server hardware after two years then rewrite and debug all the COBOL code in use.

But that's not the point... Sure, you'd not let the kid walk around the "
big city" alone, but do you excuse the mugger for being there because
there's been others there?.. Are they acceptable because of that?....

There's a difference between protecting your kid and allowing what you're
protecting 'em from to continue... It's not one or the other.

You were doing so well until your rejoinder...

I like everything in Amateur Radio, can't see any reason to hammer anyone for their interests however distant from those I choose. "Opposing worlds in harmony" is what I like about folk who look kindly upon one another. I like to shy away from antagonism. It just spins my wheels and there isn't enough time for me to waste any of it.
CUL Bakers, maybe catch you on the air sometime. It'd be a blast!
Bill Tyner (WX7U)

>for example I can get BBC
>better than the strongest AM stations in my city! Is this normal or did I get
>a bad radio?

I'm only familiar with my experience operating a DX - 394 and what I have read about it, but don't be too alarmed by this condition. Many of the better receivers, in whose company this receiver does not belong, by the way, specifically employ reduced sensitivity on MW frequencies to prevent overloading. Given that the antenna structure is different on SW and MW there is further reason to expect a difference in perceived sensitivity. Check your manual, if you possess one, and review the specs, any engineered difference would show up there. It may be specifically stated so in the text of the manual as well.

I know that the 394 that I played with did not have the same sensitivity on MW as SW when the bands were hot, and that my R-71 and Kenwood R-600 both pad the MW bands for headroom. And Auntie Beeb regularly blazes into Chicago much better than some of the 50kw AMs.

>dein cai dau

Tell me what you're trying to say here and I'll give you the proper
Vietnamese spelling.

There is no "dein" in VNese. We have -die^.n (1. electricity, 2. temple),
and die^~n (perform, act, occur, take place).

cai = foreman
ca\i = pin, fasten
ca?i = cabbage
ca~i = argue, defend
ca/i = 1. banker, 2. thing, the (article)

dao = knife
da.o = 1. time, 2. stroll, ramble, 3. play a prelude
-dao = lance
-da\o = 1. peach, 2. actress, 3. dig
-da.o = 1. army corps, 2. ethics

(Could you have meant a variation of "dau"?)

VNese is a tonal language with six tones; without including the
diacratic tone marks (~ \ / . ?), what appears is nonsense. There
are also two Ds: d and -d, two As: a and a^, two Es, three Os,
two Us, et cetera.

The ARRL is just following up on the UN/ITU action. Just as Hawaii is
a "country" in the DXCC sense but not the political sense, we now have
Palestine being recognized as a "country" in the DXCC sense (but not
necessarily the political sense).

As far as speed goes, yea Pratice, Pratice, at about 20 min intervalies, don't go for much longer, just about 20 Min a day 3 times a day with long Breaks between, that way you don't get as fustrated.

As far as Music and Code going Hand in Hand, I think they do, I think that has some thing to do with beat and rythem, A Musian knows what sounds right and what don't. What has a rythem, what don't. I seem to be the backward one, I picked up on the Code, and then had an easy time learn to play. Go Figure. Like somone Posted, the main key is pratice.
I passed the 5 wpm, if you learn the letters you can pass that. I am now getting confident enough to pass the 13 wpm, and maybe the 20 wpm. I still get panicy at 20, I need to relax more. That is proply a key thing too, relaxing.

Dan,
I feel for Hussein because he is one of us, a radio amateur. I have opinions about the Gulf War, Saddam Hussein and the Middle East but feel this NG isnt the place for that discussion. Opposition to US policy overseas doesnt mean he shouldnt get our sympathy.
Yes, I also have sympathy for all those unfortunate people with that disease. Those of us that have been in Amateur Radio for a while are proud that he is one of us. Perhaps its easier for us living outside the US to get a balanced view of world events.

73 Alan VK6BN

There's a couple of links at my http://crusoe.org site, which is really a redirect to gte. I only have Supermorse there and if you have beel following the other threads that have discussed this issue in the last couple of days, you know that SM is tricky to run on today's computers. I took a look at NuMorse recently, and it runs pretty good on a fast pentium. It is a native Windows program. I am not sure if it will run on a 16 bit system or not, but it loves W98/95. I'll probably put it up sometime this week at my geocities site. Meanwhile, I bet AC6V has a link to it somewhere from his site. I got a link to his site at mine.

> 20, I need to relax more. That is proply a key thing too, relaxing.

Yea, Thats why I advocate practicing on the air. It's more fun and you
don't really notice it as being code practice. You get to try out the
antennas and rig also to get a feel for it. I was thinking about it, and
yep, think it is the rhythem training that helps for code. In music you
get used to time signatures and keeping a steady beat , which is pretty
simular to code.Also agree, if you get tired, don't stretch it out. Quit
and come back later. Just don't want to skip days though. I started code
young, 8th grade, but never thought of it as code practice to gain
speed. I just wanted to qso. The speed just came natural from getting on
steady. But I usually worked 10 people a day or more when I was a
novice. :> MK

After the scud missle attacks on Israel, King Hussein warned them not to
invade Jordan's air space. Funny how he didn't mention anything about Iraq
invading Jordan's air space.

Every major power plant that I know of (including the nuclear ones) uses STEAM power to generate electricity. I daresay there are probably a few steam locomotives still in use somewhere, too.

Regarding CW, I was surprised several years ago to hear long strings of CW at about 25 wpm coming from a C-band satellite receiver system I was installing. It seems at least one transponder on each TVRO satellite carries an ID string which is sent in CW. Receivers came on the market in the late 80's which decoded this string to determine the satellite being received. They then programmed the tracking system according to that data.

This system is still in use. I wonder why they picked CW?

Several UK friends brought such a tape (Night and Day in Morse) to
Dayton last year - it was quite amusing! Shifting pitch, etc., esp.
when you consider the "chorus" of about 10 people tapping near the
end of the song...

Especially to KD5GEH-- I have the Alinco DJ-C5T and another small Alinco single band very small radio...

The little Alinco DJ-C5 is great.. A little getting used to for programming, but hits most repeaters in my local area....

Also easy to mod. for extended receive... Receive standby battery time is very good, as the battery is a lightweight Lithium Ion type.....

Recharges in about 3 hours....All in all, a nice little 'toy' to keep around the shack, or in your car or pocket........

Just so you're informed: at last count there were 215 operable steam locomotives in North America, ranging in size from Union Pacific's magnificent Challenger, down to little 4 wheeled teakettles.

In fact, there are more operating steam locomotives in the U.S. than at any time since the mid-1960's, and newly restored locomotives return to operation each and every year.

mtl.general,van.general,tor.general,can.general,soc.culture.canada,rec.radio.amateur.misc,rec.radio.amateur.policy

I don't know why so many people are talking about Y2K for no reason.
The best preparation is to forward the clock of respective machines to
December 31, 1999. A day later, we can see what happens. As far
as home computers are concerned, most of the machines now recognize 00
as year 2000. If not, what's matter ?? Some shareware may not
function (i.e. restricting the use for 30 days etc...) and some
banking related softwares may not function, but that's all. The
computers are not going to explode.

What we must know that electricity will not be shut down. If we do
not have electricity, then there is no use in talking about Y2K.
Assuming that electricity will be there, then we can test by
forwarding the clock. Simple as that. Forward the clock of Air
Traffic control to December 31, '99. Test if airplanes disappear
from sky... which I strongly doubt to happen.

In any case, I do not think there will be a lot of chaos as long as
electricity will be here. Not having an electricity causes the
problems just like ice-storm last year. Of course computer stops,
air traffic radar stops, water stops etc... if we don't have
electricity. Simple as that. My computer, fax machine, watch...
everything that I have will function in the year 2000. I tested it by
forwarding the clock. They, however, will not function if
electricity/battery will not be in the year 2000.

I got mine at HRO, I don't know about Canada, or the accessories you mention, but it does come with a belt clip, antenna, (ant. extender), schematics, and a wall wart to charge the Li batt. which plugs in to the base of the radio.

The battery seems to last forever, I haven't had to charge it after the initial charge. The case is rugged metal, the keys are tiny, and the manual and unit are very complicated.

Even without the optional barometric pressure unit, you can have the unit display the temp when powered off.

I found the mod for the TS-140S, snipping diodes 29 and 31.
Fine, so I think diode 31 gives you more power on all the bands
because i did that first. Then I snipped 29 and reset and checked
it out. It added 45Mhz-60Mhz to my receive, except for one little
problem. When listing between 45-60Mhz, the display goes blank
(except for dots), and it does Morse code that says "unlock". I
checked the service manual and the normal manual and this is a
"feature". It turns out that the processors catches the fact that it is
recieving out of the allowable area and immediatly shuts down
the reciever volume. Well i don't call that much of a mod.

So how can i actually LISTEN to stuff from 45-60Mhz? Also, It
now transmits from 49 to 55Mhz, but that is not so usefull as i'm
interested in getting it to work on 47.xx Mhz (Red Cross Freq).

If anyone can shed light on how to trick the processor into thinking
it's not out of band, so that i can actually listen, or if i've done the
wrong mod....Or if there is another mod... i would be very greatful
for this information. I've searched the WWW endlessly, and other
than a short note of some guy telling another to snip D29 and D31,
I've come up with nothing substantial...Let me know if you have
anything that might be of help.

When we use OOK Morse we don't have to worry about violating some other
country's rules on encryted RF transmissions -- another advantage of
Morse over PSK31.

That is VERY cheap. In the 60s I bought a tri band Swan 240 for $400 and that was a poor rig compared to today's equipmrent. That in today's dollars is more than $2000, think what you could buy for that.

King Hussein's objective in life was to protect the Kingdom of Jordan
and do what he thought was best for his country. NOT follow the
dictates of the US. He made mistakes in his 40 year + reign - but it
is hard to find a person so clearly decicted to the proper course of
action as he saw it and to always be a class act. He crtainly stands
head and shoulders above the cold in the White House!

I read some place "study resent history"

Studying and understanding ought to go together but they do not, always.
Hussein helped the "western cause" when he was helpful, ither way in the BIG
one he could offer neither help nor do harm to the west, so he went with the
MAJORITY of his Arab brothers. Now if any one thinks that Jordans' "armies"
would have change the result of the gulf war then understanding history ought
to be a duty. CT

Ah yes.....but you did not deny what he had said. I don't see the King as more or less than any other person that is licensed to operate ham radio. I do see a lot of people trying to suck up, why I don't know. If you are to receive some sort of gratuity from his estate, that is a another matter. It makes one wonder how he got his license. I suppose that as King, he could dictate what the rules were to acquire a license. Do not mistake my words, I wish no person the problems that he is going through, just that there are probably a thousand people here in the USA that are going through the same problems that he is and their names are rarely mentioned.

Yeah, I'd believe it. The Evil Empire strikes again. I prefer
an operating system to do what it is told rather than trying to
"plug and pray" its way along.

Ah, you *are* using the mixer to set the line input levels aren't you?
That's software that came with your sound card (or in this case with
your laptop). You really don't want to use the mic inputs. That'll crush
all your dynamic range. That may explain why you're having so much
trouble. The computer's mic inputs don't want to see more than about
20 mV, the line inputs want to see around 0.2 to 0.8 V. With the volume
control of the radio up enough to hear, you're banging hell out of the mic
inputs. The program is probably seeing nothing but square waves.

>The ICOM 738 does
>not allow CW filters to be used on SSB mode (no provision

Bummer. But you can operate split, with one VFO in CW-R
and the other in USB. You'll have to figure out the right offset
to get them on the same frequency, but it does work. (You have
to use CW-R on an Icom, normally it receives CW in LSB. You
can invert sense in the program and then use the regular CW

and LSB settings, however.)

Well, as noted above, you *should* be using the line input.
If that isn't working, *find out why and fix it*. I expect you just
don't have the sound card input mixer turned up on the line
input. Try to record a WAV file from the line input. If you can't
do that, something's broke.

I imagine your first attempts to tune a transmitter were shaky too.
Like most everything in amateur radio, some operator knowledge
and skill is required. But once you figure it out, it's a breeze.

> For anyone to insist that all this is going to
>automatically be a simple exercise is patently wrong. Maybe

Just as anyone who claims CW is a panacea is overstating
(way overstating) their case. You're a brand new Novice at
this. Think back to when you were a brand new Novice at
CW. Wasn't easy was it? Every amateur mode has a learning
curve. This one is pretty short, but you do have to go through
it. There is no plug and play mode, even SSB or FM voice
requires some knowledge to get things set up right so that
you don't splatter or over or under deviate.

you can buy a manuel and memorize the test. Pass it and know absolutely
nothing about the actual content of the theory. But you have to work at and
learn the code.Wthout the code we become another CB band.

Apparently you are unaware of the activities of "numbers" stations.
Until most of the world's militaries and spies abandoned it, Morse
was routinely used for encrypted RF transmissions.

CW ID requirement??? 97.119 doesn't require us to ID in CW. We can ID
in the authorized emission type we are using for the transmission (exception
SS). The PSK31 program written by a *UK amateur* does have provision to do
CW ID because *their* rules require it, but *US* rules don't require us to ID in
CW. So just don't hit that CW ID icon.

>such.

They're practical if you aren't too far from a repeater (or your car used as
a repeater). The repeater, and its favorable antenna location, does most of
the work. I routinely hit a 70 cm repeater 18 miles away with mine no problem.
I also can't hit another one that is 2 miles away but blocked by terrain. As with
most things UHF, line of sight makes all the difference. If you have to burn
through, the low power is a deficit, in fact *any* HT is pretty much screwed
in that situation. You need serious watts to make non-line of sight paths.

My only complaints about the radio are that you have to use an ear bud, no
speaker, and it *looks* cheesy. But it seems to work quite well for what it
is. My other HTs are a VX-1R and a C508A. They're much nicer, but they
cost a bunch more too. I really can't tell any difference in range between
any of them. They all can do pretty much what my big old 5 watt HT could
do, and fail where it failed. They're a lot more convenient to carry. No HT
is a substitute for a real radio running real power to a real antenna, of course.
But they are handy to let me use my mobile rig as a repeater when I'm
wandering around on foot, or to keep in touch with my buddies at a hamfest.

ensure that it remains a historical link with the past. In my
view, it would be a shame if CW skills were to disappear for good in the
coming decades, since that would be like the loss of a
culturally-specific language. Code testing helps to preserve this
important radio legacy.

One can't argue with the premise that you want code testing to preserve
a legacy. The argument most pro-CW amateurs advocate is that the
standards are diluted--that's a premise one can debate.

It seems there are enough licensees interested in CW that this legacy
will be preserved. BTW preservation of CW may become a moot point if the
amateur service in the U.S. isn't attracting enough new members to keep
it going. It certainly faces strong competition from video games, DVD
movies, computers, and more accessible forms of communication like the
Internet.

Easy accessibility of the Internet was the major reason I stopped
studying for a ham license. For a lot less money I found old friends,
made new ones, engage in discussion groups like this one, and even
downloaded library articles for one of my wife's term papers. I took the
path of least resistance--a natural human trait. The Internet is a great
medium for communication and information. Though I still enjoy SWL for
cultural reasons.

Since you mentioned it, I think that it would probably be a good idea to
include Ancient Greek and Latin as part of a medical education.

These languages would certainly make for a more "well-rounded" and
educated physician but certainly would add one more year to a medical
education, not worth it fincancially or time-wise--an extra year of
study is hardly a minor barrier.

Let's not let future generations of amateurs lose this important link
with their technical forefathers because of convenience or political
expediency.

Whoa Curt, there's something more involved here than political
expediency but the very survival of YOUR hobby as you now have it. Hams
will always be part of the world's culture but from the postings it
appears your membership is static or declining in the U.S. You can bet
that commercial interests such as cell phone companies are coveting the
ham bands, basically it's use them or lose them and if you don't have
the political clout of a large membership you can bet these monied
interests will want some of your bands.

In the final analysis, the future of ham radio lies in your hands not mine . Yes you may win the CW battle but will you win against the pressure competing interests. Good Luck!

How can you be so sure what I have and have not done? In fact, such 'experimenting' is what I do for a living. No one has suggested computers will explode.. this is a misrepresentation on your part. Most computers will work, some won't. Some of the ones that won't may be very important to us. It doesn't take a rocket scientist to figure out that there is very little room for error here.

Any experience with that radio (especially with packet-operation)? I can get it newly-used (it's only been used a few times) for $250, and was wondering how it'd work in the house with a 50ft or so antenna..

Also.. How does a car radio usually (sometimes?) compare to one "built for" the house? I don't yet need/want/understand all those doo-hickies on the $700+ 'base radios' at the store...

Thanks!

I am trying to learn about repeater setups.

I have a vague idea how they work, but I would like to find a good source of info on the subject.

I am not going to build one, but in a way I do use one, and I want to be able to explain how they work to group.

Actually I use it for voice satellite communications, but since I am a low end user there is no information on the theory etc.

Thanks

Mike

Yes, I suppose that is possible too - but even less so. Digital signals
are even more difficult to decode "without a computer program running"
than is Morse code. ;-)

>>slower than you're sending! I too would have "flipped you off" by sending

>I don't understand this reaction. Sure, he's sending a bit faster than he

Okay, maybe what I wrote was a bit heavy-handed, but let's look at
it again: He sends his CQ at say, 15 WPM, but can only copy say,
8 WPM.* The responding operator answers at 15 WPM, but is asked
QRS8, i.e., "I'm going to continue to send at 15 which is about
twice the speed I am able to copy at, but I want you to send at
8." Now the other op will have no frame of reference, for we usually
match our sending speed with the other operator's speed; how's the
responding op to measure 8 WPM? With a stopwatch? The exchange becomes
lop-sided when the slower op is sending fast but not permitting the
other op to match that speed.

*Encoding, whether it be with Morse or with a foreign language, is
much easier and can be done much faster than decoding. Any language
teacher will be able to cite studies that have been conducted to confirm
this. And I realized it too while learning Morse, German and Vietnamese.
WRT Morse, while I was hovering at the 10 wpm plateau, it was easy to
push a key at 20 wpm.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!
.....

>From the Editor's Desk:

Lots of new subscribers this week! Welcome to everyone; we appreciate your stopping by. We hope that you'll contribute information to the Newsletter on your home organization, so we can all benefit. Email is always welcomed.

This week, we've included our bi-monthly list of disaster related Internet sites. Make a note of it and include these sites in your local newsletters. Happy 3rd birthday to the ACS Newsletter, with 1000 + subscribers!

Stay safe, everybody -- See you next week! Dave Larton, Editor
.....

Please Welcome:

Grand Terrace, CA

Bruce R. Pfeiffer N7CPP <n7cpp@worldnet.att.net> Carson City, NV
For some reason quit getting ACS Newsletter in late November 1998. Have downloaded the missed newsletters and now back on the list. Am Volunteer Communications Center Supervisor for the

State of Nevada Division of Emergency Mangement. In process of reac tivating the communication center which has been inoperable for several years. When back in operation will subscribe to Newsletter for the EOC. An outstanding source of information and use excerpts for use on our nets. Thanks for the good work.

Charles Sardoch KN6FM <esar145@juno.com> Salinas, CA
Hello! I am an active Ham (adv. - 25 yrs+), ARES member through EKTAR (see www.ectar.org), SAR team member (ESAR145 check out http://calesar.org/) and just basicly active. I am also with Troop 285 Monterey Bay Area Council. I am a ground pounder who likes to take his ham gear out for a stroll in the woods. I work for PG&E as a Telecomm Tech (2way - PBX - LAN/WAN - VMS - Microwave - whatever is broke!). I am always interested in ways to make it easier when things get ugly. Keep Your Feet Dry!

Fred Houghton - VE7FFK <ve7ffk@mail.ocis.net>
Logan Lake, B.C. Canada
As the Municipal Amateur Coordinator (MAC) for the Municipal Emergency Plan, I am always interested in ideas from other areas. Keep up the Good Work, the Bulletins are read with great interest up here.

Cheryl Harrison <charrison@barstowca.org> Barstow, CA
I am employed by the City of Barstow as Transportation Coordinator and I assist our Emergency Services Coordinator Shirley Hibbetts with Emergency Preparedness. In the event of a disaster I will assist her with coordinating the City of Barstow's emergency response. I have a background in emergency medical services for the local ambulance service and represented that company in the City of Barstow's Disaster Council.

Frank Carraro KF9NZ <kf9nz@juno.com> Seneca IL
I am the ARES EC for my County (LaSalle). We have one very large disaster here in Illinois. It is called "emergency management". The lack of cooperation between agencies, turf battles and politics in general is unbelievable. I guess we need and earthq uake to shake some folks up, and when the New Madrid fault lets go I am afraid we will have it. I keep chipping away at local E.M. and P.S. people, and hope that some of the info I find on your internet site will help.

Allan D. Handforth KC6VJL / GROL PG-GB-000782
<handall@ix.netcom.com> Capitola, CA
I have been involved in disaster work since 1989 Loma Preita earthquake with the Red Cross, Santa Cruz Chapter. I got licensed for Amateur Radio since 1991 and have specialized in Emergency Communications ever since. I have been ARES/RACES connected since I got my license and have held many positions in those groups and also with the Red Cross. I am also a member of the National Red Cross with the communications speciality as

primary. I have also provided education as well as received education from ma ny different sources including local ARES/RACES, Red Cross, FEMA, and CSTI. I am always looking for more information.

John K. Scoggin N3SKO/AAT3BF
<john.scoggin@conectiv-comm.com> Newark, DE
I am the Chief of Technology for Conectiv Communications, a subsidiary of Conectiv (a diversified Electric & Gas Utility). In this position I am responsible for technology direction. Emergency planning is one of my collateral responsibilities. I've held positions in Delaware state emergency management (in a volunteer capacity) such as Radiological Defense Officer and Deputy Operations Officer for over twenty years.

I'm also a Delaware State Fire Policeman (3-9C), as well as a member of Army MARS (AAT3BF). My station was also recently designated as a new NCS SHARES station (busy!).

In an unrelated field, I am an Assistant Professor in the Computer Science Dept. at the Univ. of Delaware (just to keep me off the street). :-)

Maree Hawkins <maree@mid.org> Modesto, CA
Modesto Irrigation District provides irrigation water (64,000 acres, electricity (92,000 accounts) and domestic water (wholesale to the City of Modesto) in the Central Valley community of Modesto and surrounding areas. In an emergency situation it becomes quickly apparent that all government agencies must work together. I am in the MID Public Affairs Department.

Frank Myllo KC6YPV <fmyllo@prodigy.net> Lakewood, CA
I am a member of the Los Angeles County Disaster Communication Service. City radio officer for Artesia California. Acting District Operations Officer for the Lakewood district. We provide local cities with communications for their events, such as parades and safety expo's. In emergencies we provide communications from city to county governments. We are also a RACES organization.

Red Cross Handling Inquiries About Colombian Earthquake

Families who are seeking information about the welfare of relatives who live in an area of Colombia devastataed by an earthquake early this week can now get some help from the American Red Cross. An American Red Cross spokeswoman in San Francisco says a phone bank staffed by volunteers can be reached

at 800-520-5433 from 9 a.m. to 5 p.m. on weekdays and from 1 p.m. to 4 p.m. on Saturdays. The volunteers will take information only from immediate family members and will then make inquiries through an international network in an attempt to locate a person.

These inquiries pertain only to non-U.S. citizens. Persons concerned about U.S. citizens who were Colombia at the time of the Jan. 25 quake should call the State Department at (202) 647-5255 or 5226.

Current Events:

From: Paul Cavnar <nn7b@powernet.net>

Good Evening Dave -
I wanted to sent this note to you and see if you would be interested in listing information for the "L.A.S.T.-99" Search and Rescue exercise that will be held near Reno in April. It is planned for the weekend of 15-18th and is being sponsored by NASAR, Nevada State D.E.M, Washoe County Sheriff, and California OES. It is being offered to law enforcement, fire and search and rescue units in the eleven western states and is expected to draw an estimated 600 participants. There will be numerous classes offered in just about every facet of search and rescue operations. The cost ranges from $35 to $45 for the week- end including meals. There will be space available for RV parking and camping at no cost as well as blocks of rooms have been set aside at several of the local hotels and at special room rates for L.A.S.T. participants.

It would seem that there are people involved in SAR on the ACS list who would be interested in the exercise and it would be a good place to share this information.

The Northern Nevada Amateur Radio Services group will be serving as communicators for the exercise on-site, handling administration and logistics. The county Sheriff will handle all emergencies. There is also a possible need for additional volunteer amateurs who would like to participate by assisting

NNARS site operations. So, once we have more details on our actual needs, we will likely be inviting California ACS members who would like to come to Reno for a weekend or just the day and be part of this event. Meals will be furnished to all volunteers while at the site and RV parking and camping space is also available at no charge. Sorry, all RV's and trailers must be self contained as there are no "hookups" available.

I will forward my local information message that went out on the NNARS list server to you once I complete this message and you will then have all the details that we presently have on the event. You are also welcome to post this on the ACS list as you so desire in it's entirety or only necessary information. You are also welcome to use me as a local information source for the event.

If you have any questions, please send them my way.

73,

Paul Cavnar, NN7B

U.S. DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric
Administration
NATIONAL WEATHER SERVICE
1325 East-West Highway
Silver Spring, Maryland 20910-3283

JAN 22 1999
New Safety Video

Flooding is the number one weather killer in the United States. Nearly half of these deaths occur in vehicles when motorists drive into flooded highway dips or low drainage areas.

In the Spring of 1996, the National Weather Service's Office of Hydrology produced an eight minute video entitled, "The Hidden Danger, Low-Water Crossing," that graphically depicted the hidden dangers of low water crossings. The video stressed how as little as six inches of water can cause a driver to lose control of his vehicle and two feet of water will carry most vehicles away. More than 2,500 copies of this high successful video have been distributed to emergency managers, search and rescue teams, The American Red Cross, local AAA chapters, local and state highway administrations, driver training schools, etc.

This video is now available in Spanish. The video is free except $3.50 which covers postage and handling for each video. To obtain copies of the video, send a check or money order payable to NOAA/National Weather Service to the following address:

LWC Spanish Video

.....

COLOMBIAN QUAKE SPRINGS HAMS TO ACTION

Amateur Radio nets activated in short order on 20 and 40 meters following an earthquake January 25 in West Central Colombia. The quake, measuring 6 on the Richter scale, killed more than 1000 people, injured thousands of others, and caused major structural damage. The Salvation Army reports more than 150,000 people missing in Colombia's mountainous coffee-growing region. The initial tremor and some aftershocks were felt in the capital city of Bogota. News media in Colombia were reporting "chaos" in the city of Armenia, where some residents stormed and looted stores and supermarkets when relief supplies failed to materialize. Martial law was declared there.

"In most cases, the problem is in the distribution," said Dallas Carter, W3PP, in Laurel, Delaware. Carter monitored some of the first reports of the quake via Amateur Radio on a 20-meter relief net run by HK3SA and HK3RQA and has been assisting as a US net control--sometimes for as long as 12 hours a day. Amateur activities were taking place on 14.347 MHz and locally on 7.085 and 7.090 MHz.

Ham radio was a major source of information out of the affected area in the hours immediately following the disaster. "They are requesting blood, water, medical assistance, rescue equipment," Carter said this week. He said HK3SA was flown into the city of Armenia and has set up an HF operation to maintain contact via 40 and 20 meters to directly handle international health-and-welfare requests as well as keep in touch with the capital. He said 2-meter repeaters were being used for local

emergency coordination.

The Salvation Army Team Emergency Radio Network (SATERN) has established contact with hams in Colombia and a net on 14.265 MHz and was helping with inquiries about victims. At this point, most of the health-and-welfare traffic was coming into the US from the stricken regions, while not much was going into the area. The Salvation Army's Michael Koenemund, KB1CKF, reported that the Salvation Army had dispatched a 10-member assessment and first response team from Bogota to the affected cities of Pereira and Ibaque. "The team will render primary services, including food, water and shelter," he said.

The International Red Cross in Colombia has dispatched a team of 80, plus relief equipment and supplies "There's an extreme shortage of doctors," Carter said. "They're still digging people out."

The ARRL has offered its assistance to the Liga Colombiana de Radioaficionados (LCRA), the League's IARU sister society in Colombia.

Media in Bogota have set up Web sites with information from the affected areas including lists of individual names and status. See http://www.rcntv.com.co or
http://www.eureka.com.co/terremoto/ (Spanish) or
http://www.eureka.com.co/terremoto/indexEn.html (English).

By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC169 Toddler & Infant Go Bags Release 2/1/99

More helpful ideas from the Huntington Beach CERT Newsletter
August 1996. Even if YOU don't have children, it can help to
know this information.

Toddler Grab and Go Bag

Emergency phone list
Authorization to Consent to Treatment of Minor form,
completed
Light stick, flashlight
Blanket
Toys, books, stuffed animals
Crackers, favorite snacks
Juice boxes, Toddler's Best box milk,
Pedialyte (electrolyte replacement solution)
At least one change of clothes and light jacket
Use firm soled slippers instead of shoes (less expensive)
Sunscreen
Toothbrush and toothpaste
Tylenol) Triaminic, (any other medications the child may
need), medicine dropper
Thermometer
Diapers and wipes (even if potty trained, in disaster
my regress)

Infant Grab and Go Bag

Emergency phone list
Authorization to Consent to Treatment of Minor form,
completed
Light stick, flashlight
Blankets
Toys, books, stuffed animals
Formula, disposable bottles, nipples
Juice, water
Instant baby cereal, bowl and spoon (can use instead of
jar baby food for a few days until outside supplies arrive)
Pedialyte (electrolyte replacement solution)
At least two changes of clothes and light jacket
Use firm soled slippers instead of shoes (less expensive,
if child is walking)
Sunscreen
Toothbrush and toothpaste
Tylenol, Triaminic, (any other medications the child may
need), medicine dropper

Thermometer
Diapers and wipes

Grab and go bags should be securely attached to the
child's bed in an easily accessible location.

GOOD SAMARITAN LIABILITY
Calif. Civil Code; Ch. 9, Sect. 1799.102
Emergency care at scene of emergency

"No person who, in _good faith_ and not for compensation,
renders emergency care at the scene of an emergency shall
be liable for any civil damages resulting from any act or
omission. The scene of an emergency shall not include
emergency departments and other places where medical care
is usually offered."

That's exactly the point. If he's running a piece of digital software other than Morse code, he's not running Morse code software. Although it's theoretically possible, I don't know of any digital software that decodes whatever mode it happens to hear.

3162. Heath Cheyenne info needed

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-08 00:00:00 UTC
From: Tim <ka8ddz@eaglequest.com>
Message-ID: <36BF92D5.9FB4F94F@eaglequest.com>
Source record: 151086

I've just recently, cleaned up and re-stung an old Heath Cheyenne MT-1, somewhere down the line it was modified and an additional switch was put on the faceplate for TX. My question is, does an unmodified Cheyenne need to be put in Standby for recieve? In other words, does the transmitter interfere with the reciever due to the occilator running when sitting idle in the CW mode? If not I'd like to restore it to it's original configuration, if so I want to add a QSK circuit to it.

Anyone know? What a nifty transmitter for $30, who said HR was expensive :)

Tim ka8ddz

97.205(c) & 97.205(e)

The rules recognize coordinated repeaters in case of harmful interference caused by an uncoordinated repeater. They also allow the use of a repeater to restricted to specific users.

The operator of a closed repeater does not have "control" over a frequency. But since repeaters can't generally move to another frequency, it is considered good amateur practice not to interfere with one with non-repeater operations.

It is also good amateur practice for repeater owners to cooperate in the coordination process whether open or closed. There is really no reason for people to hog channels and then bitch and scream when someone else wants to come up on the same channel in an nearby community - provided users all cooperate.

Of course! If I am engaged in a PACTOR QSO, I am not about to switch
to CW unless I manually/mentally recognize a CW 'SOS'. When you are
engaged in a digital QSO, do you switch to CW everytime you hear a
CW signal. I think not! If yes, what does the ham with which you are
communicating at the time think about you?

It does get quit ammusing at iems though. As far as want something for less, that free enterprise, and along as there is competion there will be the "wheeler & Dealrs" if not the price, and quility would be pea poor, for the most part. I take the gentale that wrote about hams not doing this and that, I take you have had one bad experince with a ham(s). Sorry to hear that. As Far as hams not doing anything to help with emegency Communications, Well you need to do alittle more looking, because I would just about beat the is a R.A.C.E.S & A.R.E.R.S. in your area, wich do every thing from SkyWarn to emegency Commuinicates, After a desaster hits. Any way I didn't mean to offend you or anything, but you need to look a little Harder, for theese Groups don't always get the regonition in the news papers and radio, in fact as that aspect goes were not very active in the newspapers and stuff. It just as well.

Call for Papers
for
Central States VHF Society
Conference and Proceedings

The CSVHF Conference will be held July 22-25 in Cedar Rapids, Iowa.
Authors wishing to submit a paper
and/or make a presentation at the conference are encouraged to contact
Barry Buelow WA0RJT. Papers
will be accepted in technical areas related to VHF and UHF equipment
design, antennas and related topics.
Operating procedures and reports of band openings are also welcome.

The closing date for submitting a paper is May 15, 1999. Printed
material or electronic media will be accepted.

The CSVHF Society maintains a web page at http://www.csvhfs.org

Authors should contact:
Barry Buelow WA0RJT
4110 Emerson Ave NE
Cedar Rapids, IA 52411-6716
Email to: bjbuelow@plutonium.net

What cracks me up is the voice dubbing. The voice usually doesn't quite match being some studio guy is doing the dub. I see tons of that. I should break down and get premium movie channels to tape movies, but I'm too cheap. I tape all the good ones off the basic cable channels and cut all the commercials as I tape. I sure would like to go to digital video recording. I'm sick to death of vhs tape. Plus, they physically take up a lot of room after you get a few hundred movies taped. I usually get 3 movies per 120 tape. MK

Jiffy Jeff's philosophy is quite simple: Talk down to people when you know more than they do. That might work with his students, but it makes him look like a pompous ass when he does on this newsgroup.

As usual you know nothing about what you are talking about.
You don't even understand the problem.

You also don't even know what a computer is, unless it looks like a PC.
You also seem to think that all computer technology is as current as yours.

Most PC's build during the last 1 1/2 are compliant. Even older ones may not fail.
It could be as simple as the clock will not roll over automatically, but can be manually set.

The PC may be compatable, but the OS may not be. Windows 95 is not year 2000 compliant.
It will not process date information correctly. Then the application may not be compliant.
Sure the latest version of any software title maybe compliant, but most people are a verson or two behind.

But the problems get more prolific the older the technology. There are many mainframes still running.
Big business and big government still need these monsters. Many of these applications are older than you are and cannot process four digit dates.

But that is not where the real big y2k problem is found. Where the big problems is in the computers that we don't think of as computers. They call this emmbedded technolgy. It is exactly what it sounds like, a computer has been emmbedded into the technology. This technology has permeated or society. Most of it is old enough to be non-compliant. It covers things like process controllers, an application is water purification. Things like radar and military defence systems. Things like Ontario Hydro, who cannot guarantee they will be able to generate power.
Things like traffic light controllers. What is bad about this is the technology cannot be tested like a PC by moving ahead the date.

Besides, for you, setting your PC ahead to 2000 may work for you, but it is not a solution for business.
A simple test like you suggest, if failed, will corrupt data, and with inaccurate information that will affect business.
Business can't afford your technique. Besides, there are tools that will test your PC in a stand alone mode so you don't have to gamble. But PC's are the least thing to be concerned about.

Hospitals have tested medical equipment, and all of it with emmbedded technology fails.

Perhaps this is why Harris has given them 400 million dollars to replace it.

Further, setting the clock ahead is not a test. Try processing some data based on date and see if your results are accurate.

Anyways, IT professionals have been raising this issue since the 70's. Most companies waited until last year to even look at the situation. Like you, the money people did not see the profit in fixing this problem. Now they are spending like there is no tomorrow to ensure that they will be in business in 2001.

In the words of the world authority on the Y2K problem...."Jan 1, 2000 will be a disaster. Whether the disaster lasts for 1 hour, 1 day, 1 month, 1 year or more, no one can predict, but there will be disaster. This we are in agreement with, just nobody can accurately predict the extent."

My PC is Y2K compliant. My OS is compliant and all the software I use regularly is compliant.
SO what ?

3174. Re: CW in the 21st Century.

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-08 00:00:00 UTC
From: Dan Finn <djfinn@ibm.net>
Message-ID: <36BF0232.408D0FD3@ibm.net>
Source record: 151121

I think that it is basically good for the future of ham radio that CW Morse is being removed as a test requirement. Continuing to make CW a mandatory test requirement marks the Service as antiquated and not very willing to face the future of technology. Once we decide to go this way, we should do so 100%. That is,
remove the entire test (not 5 wpm, 1 wpm etc..). Do it right the first time.

On the other hand, I do believe that amateurs should, as a public service, endeavor to keep the CW mode alive. With all of the commercial and military services dropping the mode, only amateur radio seems to be left to keep it going. The replacement technologies are too sophisticated to be as inherently reliable as simple CW. I say this despite all of the counter arguments I have seen on this point.
Microprocessors are not readily available in many places of the third world, and,
I have been to the 'third world'

As an 'incentive' for amateurs to keep the mode alive, we might consider a gentlemen's agreement where a portion of each band is set aside for CW only. This would not be a mandatory FCC band plan but a simple guideline, perhaps endorsed by the ARRL. CW is just too useful to let it die out completely. Amateurs need a little incentive to learn it because it truly can be difficult to learn. A little bit of dedicated CW spectrum (by gentlemen's agreement) might be all we need to keep the mode alive.

Regards,

KR4AJ (dan)

3175. The Problem With Casey Thrower

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-08 00:00:00 UTC
From: cbrambo@aol.com
Message-ID: <19990208083529.02245.00000004@ngol07.aol.com>
Source record: 151122

So here comes our friend Casey Thrower, going by the handle of "TWB" or whatever he decides to use today (the poor little meathead still hasn't realized that we recognize his posting host and dialup ID, even though he keeps changing his username that appears in the headers.) He makes this big speech about how "everything was quiet for awhile", until now. That big 'ol, bad 'ol CB Rambo has resurfaced on the newsgroup. Well guess what, Thrower...if you and/or your friends hadn't decided to get on here and impersonate me from DejaNews, you wouldn't have to worry about it. You remember the old story about letting sleeping dogs lie...
But you couldn't leave well enough alone, could you? Either you or one of your buddies.

So now I'm back...and for a long time to come. Deal with it. Either that, or turn your computer off and go play with your plastic submarines in the bathtub. That seems to be what you do best. You lose again, Thrower.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

Jeff,

It certainly appeared that your post was designed to illustrate a feigned ingnorance of a very common expression used in the late 60's and early 70's in order to beat the orignal poster to death with the details. A common war-era usage (with no attempt at correct spelling - only phonetics): "GI beaucoup dinky-dow..." Translation: One Crazy Soldier.

3177. Re: Code learning: SuperMorse/Koch vs. CodeQuick

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-08 00:00:00 UTC
From: Kelly <not_kbersch@bigfoot.com>
Message-ID: <79n16fqvg1@news.mcn.net>
Source record: 151124
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

I have a Tech+ ticket and am working on upgrading. If I had it to do over I would NOT learn code at 5 wpm. I'd start right out at 20 wpm. Learning at 5 wpm will make it harder to learn 20 wpm CW. At 5 wpm you have time to count the dits and dahs, at 20 wpm you don't. It's very difficult to get out of the counting habit.

I think any good CW training software should work. I use NuMorse but I've used SuperMorse in the past and liked it. I've been meaning to locate a copy of the latest version of SuperMorse. NuMorse has some features I'm not real fond of.

I'd also get some practice tapes for 20 wpm. I have a set of 3 tapes from KB6MT that teaches code at 21 wpm. He slows the word spacing down but always sends with a character speed of 21 wpm. I listen to them for about an hour twice a day. I think I should be ready when our club tests again in April.

I think you're right about CodeQuick. I wouldn't use it, though others may be of a different opinion. I'll stick with a combination of software and tapes.

KC7CSB
Kelly

==========
Mark Keith wrote:

Hi all,

I'm just starting the code learning process. I've read a lot on these newsgroups about various methods of learning code. Being a serious amateur musician, I am well aware that learning something the wrong way is much worse than not learning it at all. So, since I'm at the beginning, I'm looking for advice from those who have gotten there already.

My goal is to go for 20 WPM right off the bat. (And, by the way, I am aware that if I wait long enough, I would only have to hack 12 WPM; however, I'm going to try for the Extra 20 WPM as it currently exists for personal satisfaction.) I have settled on two tools: SuperMorse with the Koch method (see http://griffy.nmt.edu/sara/sara/finley.morse.html) as Dave Finley describes, and CodeQuick (http://www.cq2k.com).

My question: If one trains with SuperMorse/Koch, do you even need CodeQuick? I haven't laid out any $$$ for CodeQuick, hence the

REAL reason for the question :).

I get the feeling that at 20+ WPM, you're not going to have time in your brain to say "dog-did-it" or whatever the CodeQuick mnemonic is; you just have to know what the sound is instinctively. (This is in complete analogy to reading music: you have to read a measure or two ahead to become a good sight reader, which means the note translation process has to be subconscious.) So, if you are not under severe time pressure to get the test done at 12 WPM (say), it's better to build using the Koch method.

Please give me your opinions, either by email or by posting. If I get a sufficiently large response by email, I'll summarize for the group.

3178. Re: King Hussein Ham operator

Hussein pissed a lot of us Americans off because he did what he thought best for his country, not necessarily what we thought best for ours. Still, from a geopolitical perspective, we were a hell of a lot better off having him as leader of his country than your typical towel-headed despot. He stood head and shoulders above the crowd in the middle east as a reasonable man. And he had a neat callsign too.

That's all I got to say about that.

3179. MH-29 Yaesu Display Mic Manual needed.... or copy..

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-08 00:00:00 UTC
From: chia@news.utk.edu
Message-ID: <79m749$b4n$1@gaia.ns.utk.edu>
Source record: 151126

Well, I picked up a good deal on a MH-29 display mic for my FT-530, and I was wondering if anyone has the manual for this mic? I have pretty much figured it out, but would like to have a manual or a copy of the manual for it, then I can know what each thing does etc... the buttons have almost wore off of it too. Anyone with help let me know I can send SASE and cover the copy fees etc.... or I can take an E-Mailed version as well. Thanks....

There is a 2 year grace period in which an expired license can be
renewed. Beyond that, there is VERY LIMITED credit for former holders
of the Technician class license. Other than that limited credit, after
a license passes the grace period, there is no alternative under the
current rules but to start from scratch.

:
:PCs are not the problem. The problems are the mainframes/minis running
:COBOL written in the 70s.

This has been the problem. Everyone got comfortable. No one
wanted to spend money. Especially government agencies. And
departments merged, companies merged thus the source code
was lost.

What Y2K has done is make the big companies and the government
update their systems. It has been a money maker for all of us. Plus
many are just moving over to PC network servers off of mainframes and
minis. And the COBOL went out the window. Now it is Oracle and SQL.
```

If we use a computer to generate and demodulate the signal, it is not
really "stupid" to require a CW ID. It identifies the sender (and
"should identify the particular signal type for those types not obvious
by ear" to any trained monitor. If your favorite signal program does
not CW ID (It is a tad deficient!), but wecan readily switch (or mix in)
a simple and cheap IDer into our audio lines. I very much regret the
proposed deletion of the CW requirement, but more sadly realize that it
has become a political necessity. Can't we all get along??

Thanks for the reply Gary.

Apparently a few people construed my comments. I'm *NOT* implying any sort
of conflict of interest or wrongdoing on the part of the company that
handles filed those comments. I'm sure the company and people there
conduct themselves in a professional, ethical manner, and my question
shouldn't be construed otherwise.

My question, which I did a piss-poor job formulating last nite, is this:
is it appropriate for the ARRL, a non-profit entity, to use the services
of any organization that also services for-profit organizations with a
pecuniary interest in ham radio? What happens when the goals of the two
organizations being serviced by that organization start to diverge?

The main problem with Y2K won't be with computers. It will be with people who buy into the Chicken Little mentality of Gary North and others like him who think every computer on the planet will go haywire because of a date rollover. Gary North is a history professor. Does this automatically make him an expert on computers? Many companies have successfully tested systems for Y2K problems. Others have not been successful. His web site focuses on the latter, and tries to make you think that all systems will act up at the end of this year. It looks to me that Mr. North has reached a conclusion *first* and then looked for the evidence and "expert opinions" to back it up. Even on systems that have been successfully tested, Mr North says that they won't guarantee their systems will be up and running on January 1st. The reason for this is simple. A system might be 99.99% Y2K compatable, yet that .01% might cause some problems. Nothing is perfect and there's always an off chance something might have been overlooked, even after successful testing. This happens with software every day, which is why you never see any software come with a guarantee to be absolutely bug-free. With such being the case, an ambulance-chasing lawyer would have a field day with a Y2K guarantee.

Also remember this: "Experts" make predictions every day that don't come true. A classic example of this is a book that economist Dr. Ravi Batra wrote in 1988, called "The Great Depression of 1990". 'Nuf said.

The good news is that the IRS computers are not Y2K compliant. The problem
is most severe in the business world which is still using COBOL programs
written in the 70s.

Hello Mike...

What would you call a divergence? Perhaps, there would be something, at some time in the future where the interests of one party would have a conflict with the interests of the other party, but at that time the lawyers could get out because of the conflict. To anticipate in advance a conflict of interest would preclude the firm from obtaining a second client, ever.

What kind of example can you think of where these two entities could cause a conflict of interest?

Well, it tells me two things about you. One, you have the
get-up-and-go to at least run a simple test on your
machine. Two, you seem to like simple solutions. One
test, forget the problem, tell everybody to get a life.

You also need to test your computer to see how it will
handle every February from 2000 through 2008, minimum,
in case it gets confused about what's a leap year. More
important, you need to try setting the date to the 2000
transition and then _powering_down_. Whether your machine
can handle 2000 while running is one thing; whether it can
recover the date from its internal clock on a cold start
is another. By doing this somewhat less superficial test
I found that, short of buying a replacement BIOS, I'm
going to need to set the date on each cold boot. This is
acceptable to me, and I have the DATE command sitting
commented out now, ready for activation at the end of
the year.

This is quite common. However, note that those are steam turbines,
not reciprocating piston steam engines. The heat source used for
boiling the water might even still be coal - but I'll bet that it's
not hand-shovelled into the firebox any more.

Technology changes with time. Some aspects of old technology remain
useful, and if they do they remain in use. Others drop out of use.

No one has suggested that there is anything wrong with people who want to
use older technologies, either for nostalgia or challenge or whatever
personal reasons they have. The debate is over whether *all* hams should
be proficient in *one particular* older mode as a condition of their licence.

A comparable discussion would be: Given that seam locomotives are still
in daily use in some parts of the world (including here), is it necessary
for *all* locomotive engineers to demonstrate the knowledge necessary
to run one?

I think not.

Thats why you want to listen to both slow and fast when starting out. You don't want to stay frozen at any certain speed just to listen to. I don't see how working at 5 wpm would hurt you going to 20 wpm as long as you didn't stay stuck on 5 too long. By the time you get to even just 13 wpm , there shouldn't be any counting of character dots or dashes. But you may have to at first until it's drilled in the head. Thats gonna be natural. MK

So, I went into the little coffee shop around the corner from the office. Cashier is looking at the new $20 Bill and saying, "This thing looks stupid. Why did they have to change it?"

I leaned close to her, as if telling her a secret. "The old one wasn't Y2K compliant," I whispered.

"Ohhhh," she said.

Three days later, I re-enter the coffee shop. Cashier spots me and says, "Hey, you! Over here!"

I walk over. She says, "I've been waiting for you. Just what does the date have to do with a $20?"

"How long till you caught that," I asked.

"Never mind," she replied. "And by the way, don't ask for a free refill on the coffee today.....it's not Y2K compliant, either."

Yes, the line input level control had been set to midscale.
Turned it all the way up with no effect.

>

Nope. Like I said, the instructions were not right for my
computer. I had been using the computer's mic input and
adjusted the level with the radio volume control, and I
could see on the tuning indicators that I was setting the
levels correctly. It was possible to overdrive it, but just
barely and also easy to turn the input off. This was with
audio from the Icom phone jack on the front panel,
paralleled with the Timewave DSP input on an audiuo
splitter.

Today, come to find out, I had a funky audio splitter and
it was at times introducing serious hum that masked signals,
not audible from the Timewave but visible on the PSK tuning
screen. I had been cautious about using the rear panel cord
I had made up for the Icom since the fixed audio level was
likely to be too much for the 'mic input' on the sound card,
but it was now time to try it. I found that the fixed level
audio from the Icom accessory jack was perfect for the 'Mic

Input' on my laptop soundcard, with no adjustment whatever
needed. The level couldn't be better. Lucky, I guess.
Problem with my soundcard? Works OK otherwise, just that
nothing works on 'line in'. And the 'mic input' doesn't work
as predicted, but does just fine as is. CMOS setup problem?

My earlier point was that it appears that the online manual
instructions may not fit all cases. It did not in mine.
Perhaps an exception, perhaps a computer problem.

Now it was time to make a contact since xmit audio was now
hooked up also. Heard an ohio station near 14070khz calling
CQ on PSK. Answered him and a 30 minute contact ensued, with
my output power set to 15 watts. It all worked fine. He told
me he had been informed that he needed to pad his (fixed)
xmit audio level down since he was transmitting 'harmonics'.
I could see the sidebands displayed on the tuning scope,
shown as recurring white stripes a uniform distance from the
center frequency,pretty wide. (they looked more like
spuriously generated sidebands than harmonics) :-]

> > > The idea that you need a fast computer is a bit misleading

>

Nope. It just doesn't work that way. I can always hear
anything I can see on that tuning waterfall indicator. Some
that I can barely hear, and can barely see on the tuning
indicator, I can't lock and print. They are evidently too
weak. Is my CW ear just that much better at hearing weak
signals than a non-CW operating ham? I've had lots of
practice at digging out the really weak ones.
Sorry, that's just the way it is. And my input levels are
just fine. In playing with the audio from the radio's phone
jack, I was able to get a very good feel for what
constitutes over-and-underdrive levels to the soundcard. The
fixed level from the Icom rear panel is perfect. You
couldn't adjust it any closer.

There are other issues. In looking for PSK signals on a busy band, I find that a narrow filter is a liability, you need to be able to hear the weak distinctive heterodyne that a weak PSK signal causes. If the PSK signal is so weak that it is masked by PACTOR or other digital signal, you probably won't find it at all, but once contact is made, it will hang in there through some pretty incredible QRM and noise with mostly good print.
You MUST tune slowly and carefully. Many times the station will be near the end of a transmission and will be gone before you can get him phase locked. This is NOT a "quick and easy" proposition.

> Well, as noted above, you *should* be using the line input.

> do that, something's broke.

I went through the entire test procedure as given in the manual when I first downloaded the program and found that all I was ever able to get in the "line in" jack was an extremely low level of audio that looked very clipped on the WIN95 test screen. Looked almost like crosstalk and may have been,since the audio from the radio at that time was maxed. But I was able to record into the mic input normally, from the radio by setting the level with radio's volume control. As is ususal today, the laptop computer came with a very minimal manaual. No help there.

> this.

Well, not quite. I went to a lot of time consuming trouble to read the manual and do the tests required. I spent several sessions last weekend tuning and copying, testing various levels on the input. I knew in advance what to expect and had pretty good success in printing PSK last weekend. Hey, I didn't start out with computers yesterday. (it was in 1959 and the computer was an analog model) I'm no expert but not a novice, either.
Storms kept me off until today, and now the hardware intermittant is corrected and it's working right, I've had more time to play with it. I certainly don't intend to take

anything away from PSK, but it just is not a really simple mode to deal with. Setting up skeds on a definite frequency would be a big plus. I can see that you don't go searching the band for very weak signals on PSK with much success, unless you really want to spend some time at it. Looking for weak signals on a busy band sing the visual indicator alone would be most unproductive. It's a different matter to have all activity near a single frequency, and with heavy PACTOR interference that's bad enough. It IS a neat mode, and would be good for weak-signal work--if you can just find the weak signal on a crowded band. It's sure to become popular, more and more stations are using it. But it's not a mode that requires little attention to detail.

And who was it that claimed that CW is a panacea? Of course it's not. But-To a great many hams worldwide it IS still a very useful and desirable mode. And it still 'gets through' better that any other mode in common use in ham radio today.

Geert, I believe that you need to connect the horizontal and vertical feedpoints of your crossed yagis with a 90 degree phase shifter. This would be a quarter wavelength (including velocity factor) of coaxial cable. You would then connect your feedline to one of the feedpoints. I am not sure which one (horizontal or vertical) would go to the feedline for right-hand circular polarization. You need to check a good book or a more experienced VHF/UHF ham. If you connect the feedline to the "wrong" antenna, you get left hand circular polarization instead of right-hand! This all assumes that the horizontal and vertical elements are coplanar, or very close together. If they are not you would have to compensate with the phase shifter. Hope this helps!

Mayday is the international code for emergency communications. It's
supposed to be known by all aircraft and marine users worldwide - even
if they don't speak English. It's also supposed to be used in the
amateur service. Are you suggesting that most amateurs are so ignorant
that they don't know what Mayday means?

I agree that something like "Emergency" is more suitable on CB, where
most users are the general public with no training at all.

Oh come on. Any program that uses fixed-width fields would store
September 9 as 09/09/99. No program is likely to mistake that for
99/99/99, which is what might be used as a "flag" in such a program.
Remember that the month and day need to be *two* digits wide.

Well, for example, maintaining a 13wpm/5wpm code test and eliminating a
code test. Would it be appropriate for an organization to file comments on
behalf of both NCI and the ARRL, for instance?

Hmm. I think that paragraph above makes sense this time. I'm starting to
sound like Mark Morgan in a few of my posts. I guess taking Nyquil for
this damn flu and posting to usenet doesn't make a good match.

That's not unusual. The communications law firms who practice before
the FCC often handle many clients interested in the same matters.

>I pose this general question for our esteemed legal experts to address:
>Isn't it a conflict of interest for a law firm (for example, Phil Kane's

No. Unless the parties are in direct litigation against each other, there is
no conflict of interest. There's no litigation here. It is the firm's job to couch
the views of each of their clients in a form suitable for presentation to the
FCC. That's all. Basically, they just act as a guide through the bureaucratic
maze for their various clients' views.

>From my past dealings with lawyers, and my layman's understanding of legal
>ethics, it seems it would be. *UNLESS*, of course, the underlying

For profit and non-profit status have nothing to do with it. Unless the parties
are litigating against each other, there is no conflict of interest. This is not that

sort of proceeding.

>If, in fact, that is true, then what conclusions can we make then
>about the data from the FCC's web site shown above? Does this mean the
>interests of ICOM, an organization that wants to sell more radios is the
>same as the ARRL?

There is likely to be some commonality of interest in this case. The IAC position and the ARRL position are not that far apart. Both parties want to see amateur radio grow and prosper into the future. The industry wants that because it is good for the long term success of their businesses, and the ARRL wants that because it is good for the long term health of amateur radio. Neither party wants to see amateur radio continue to stagnate or decline. I'd add that both parties can read a calendar, as well as the demographics of current amateurs, and realize that a great decline is exactly what looms in our future if action isn't taken now.
